The singularity came, and all man's problems were over. Death was conquered, scarcity abolished, and anyone could have or be anything. What would become of mankind unchained? Some were afraid. Afraid that they'd become addicted to endless ecstasy, or worse- take one upgrade too many and lose their very selves. Omar vowed to never let that happen to him. He gathered his closest friends: Flora, the vain artist. Liga, the carefree hedonist. Zhang, the defiant perfectionist. And Colville, the melancholy dilettante. Together, they walled themselves off from the rest of the world. And for 3000 years, it worked. Their compact lived, loved, lost, and grew together. They even found a new member: the Oracle, a computing cluster trying to reclaim her lost humanity. But now Colville wants out. Flora will go to any lengths to keep him, but the others aren't so sure. With the compact's fate hanging in the balance, will they find a way to keep themselves together? Or will they part ways, potentially forever?

### **An Introduction to Constitutional Law**

This multimedia platform combines a book and video series that will change the way you study constitutional law. An Introduction to Constitutional Law teaches the narrative of constitutional law as it has developed over the past two centuries. All students—even those unfamiliar with American history—will learn the essential background information to grasp how this body of law has come to be what it is today. An online library of sixty-three videos (access codes provided with purchase of the book) brings the Supreme Court's one hundred most important decisions to life. These videos are enriched by photographs, maps, and even audio from the Supreme Court. The book and videos are accessible for all levels: law school, college, high school, home school, and independent study. Students can read and watch these materials before class to prepare for lectures or study after class to fill in any gaps in their notes. And, come exam time, students can watch the entire canon of constitutional law in about twelve hours.

SUVs have taken over America's roads. Ad campaigns promote them as safer and "greener" than ordinary cars and easy to handle in bad weather. But very little

## Online Library 2002 Ford Truck Escape 2wd V6 182 3 0l Vin 1 Sfi Engine

about the SUV's image is accurate. They poorly protect occupants and inflict horrific damage in crashes, they guzzle gasoline, and they are hard to control. Keith Bradsher has been at the forefront in reporting the calamitous safety and environmental record of SUVs, including the notorious Ford-Firestone rollover controversy. In *High and Mighty*, he traces the checkered history of SUVs, showing how they came to be classified not as passenger cars but as light trucks, which are subject to less strict regulations on safety, gas mileage, and air pollution. He makes a powerful case that these vehicles are even worse than we suspect--for their occupants, for other motorists, for pedestrians and for the planet itself. In the tradition of *Unsafe at Any Speed* and *Fast Food Nation*, Bradsher's book is a damning exposé of an industry that puts us all at risk, whether we recognize it or not.
