### Automobile Book

SUVs have taken over America's roads. Ad campaigns promote them as safer and "greener" than ordinary cars and easy to handle in bad weather. But very little about the SUV's image is accurate. They poorly protect occupants and inflict horrific damage in crashes, they guzzle gasoline, and they are hard to control. Keith Bradsher has been at the forefront in reporting the calamitous safety and environmental record of SUVs, including the notorious Ford-Firestone rollover controversy. In High and Mighty, he traces the checkered history of SUVs, showing how they came to be classified not as passenger cars but as light trucks, which are subject to less strict regulations on safety, gas mileage, and air pollution. He makes a powerful case that these vehicles are even worse than we suspect--for their occupants, for other motorists, for pedestrians and for the planet itself. In the tradition of Unsafe at Any Speed and Fast Food Nation, Bradsher's book is a damning exposé of an industry that puts us all at risk, whether we recognize it or not.

## **Auto Repair For Dummies**

The truck's role in American society changed dramatically from the 1960s through the 1980s, with the rise of off-roaders, the van craze of the 1970s and minivan revolution of the 1980s, the popularization of the SUV as family car and the diversification of the pickup truck into multiple forms and sizes. This comprehensive reference book follows the form of the author's popular volumes on American cars. For each year, it provides an industry overview and, for each manufacturer, an update on new models and other news, followed by a wealth of data: available powertrains, popular options, paint colors and more. Finally, each truck is detailed fully with specifications and measurements, prices, production figures, standard equipment and more.

**\*\*Kirkus Best Books of the Year (2013)\*\*** **\*\*Time Magazine 10 Top Nonfiction Books of 2013\*\*** **\*\*The New Republic Best Books of 2013\*\*** In this heart-lifting chronicle, Richard Holmes, author of the best-selling *The Age of Wonder*, follows the pioneer generation of balloon aeronauts, the daring and enigmatic men and women who risked their lives to take to the air (or fall into the sky). Why they did it, what their contemporaries thought of them, and how their flights revealed the secrets of our planet is a compelling adventure that only Holmes could tell. His accounts of the early Anglo-French balloon rivalries, the crazy firework flights of the beautiful Sophie Blanchard, the long-distance voyages of the American entrepreneur John Wise and French photographer Felix Nadar are dramatic and exhilarating. Holmes documents as well the balloons used to observe the horrors of modern battle during the Civil War (including a flight taken by George Armstrong Custer); the legendary tale of at least sixty-seven manned balloons that escaped from Paris (the first successful civilian airlift in history) during the Prussian siege of 1870-71; the high-altitude exploits of James Glaisher (who rose) seven miles above the earth without oxygen, helping to establish the new science of meteorology); and how Mary Shelley, Edgar Allan Poe, and Jules Verne felt the imaginative impact of flight and allowed it to soar in their work. A seamless fusion of history, art, science, biography, and the metaphysics of flights, *Falling Upwards* explores the interplay between technology and imagination. And through the strange allure of these great balloonists, it offers a masterly portrait of human endeavor, recklessness, and vision. (With 24 pages of color illustrations, and black-and-white illustrations throughout.) From the Hardcover edition.

The epic story also told in the film *FORD V. FERRARI*: By the early 1960s, the Ford Motor Company, built to bring automobile transportation to the masses, was falling behind. Young Henry Ford II, who had taken the reins of his grandfather’s company with little business experience to speak of, knew he had to do something to shake things up. Baby boomers were taking to the road in droves, looking for speed not safety, style not comfort. Meanwhile, Enzo Ferrari, whose cars epitomized style, lorded it over the European racing scene. He crafted beautiful sports cars, “science fiction on wheels,” but was also called “the Assassin” because so many drivers perished while racing them. *Go Like Hell* tells the remarkable story of how Henry Ford II, with the help of a young visionary named Lee Iacocca and a former racing champion turned engineer, Carroll Shelby, concocted a scheme to reinvent the Ford company. They would enter the high-stakes world of European car racing, where an adventurous few threw safety and sanity to the wind. They would design, build, and race a car that could beat Ferrari at his own game at the most prestigious and brutal race in the world, something no American car had ever done. *Go Like Hell* transports readers to a risk-filled, glorious time in this brilliant portrait of a rivalry between two industrialists, the cars they built, and the “pilots” who would drive them to victory, or doom.

The Book of Horror introduces you to the scariest movies ever made and examines the factors that make them so frightening. Horror movies have never been more critically or commercially successful, but there's only one metric that matters: are they scary? Back in the silent era, viewers thrilled at Frankenstein and Dracula. Today, the monsters may have changed, but the instinct remains the same: to seek out the unspeakable, ride the adrenaline rush and play out our fears in the safety of the cinema. The Book of Horror focuses on the most frightening films of the post-war era - from Psycho (1960) to It Chapter Two (2019) - examining exactly how they scare us across a series of key categories. Each chapter explores a seminal horror film in depth, charting its scariest moments with infographics and identifying the related works you need to see. Including references to more than 100 classic and contemporary horror films from around the globe, and striking illustrations from Barney Bodoano, this is a rich and compelling guide to the scariest films ever made. The films: Psycho (1960), The Innocents (1961), The Haunting (1963), Don't Look Now (1973), The Exorcist (1973), The Texas Chain Saw Massacre (1974), Who Can Kill a Child? ### **90 Years of Ford**

"Since its earliest days, flight has been about pushing the limits of technology and, in many cases, pushing the limits of human endurance. The human body can be the limiting factor in the design of aircraft and spacecraft. Humans cannot survive unaided at high altitudes. There have been a number of books written on the subject of spacesuits, but the literature on the high-altitude pressure suits is lacking. This volume provides a high-level summary of the technological development and operational use of partial- and full-pressure suits, from the earliest models to the current high altitude, full-pressure suits used for modern aviation, as well as those that were used for launch and entry on the Space Shuttle. The goal of this work is to provide a resource on the technology for suits designed to keep humans alive at the edge of space."--NTRS Web site.
