Digital Witness

Upon its original publication, *Plagues and Peoples* was an immediate critical and popular success, offering a radically new interpretation of world history as seen through the extraordinary impact--political,

demographic, ecological, and psychological--of disease on cultures. From the conquest of Mexico by smallpox as much as by the Spanish, to the bubonic plague in China, to the typhoid epidemic in Europe, the history of disease is the history of humankind. With the identification of AIDS in the early 1980s, another chapter has been added to this chronicle of events, which William McNeill explores in his new introduction to this updated editon. Thought-provoking, well-researched, and compulsively readable, *Plagues and Peoples* is that rare book that is as fascinating as it is scholarly, as intriguing as it is enlightening. "A brilliantly conceptualized and challenging achievement" (Kirkus Reviews), it is essential reading, offering a new perspective on human history.

Benchmarking the Finance Function

This book provides an introduction to the mathematics needed to model, analyze, and design feedback systems. It is an ideal textbook for undergraduate and graduate students, and is indispensable for researchers seeking a self-contained reference on control theory. Unlike most books on the subject, *Feedback Systems* develops transfer functions through the exponential response of a system, and is accessible across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Åström and Richard Murray use techniques from physics, computer science, and operations research to introduce control-oriented modeling. They begin with

state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. They provide exercises at the end of every chapter, and an accompanying electronic solutions manual is available. Feedback Systems is a complete one-volume resource for students and researchers in mathematics, engineering, and the sciences. Covers the mathematics needed to model, analyze, and design feedback systems Serves as an introductory textbook for students and a self-contained resource for researchers Includes exercises at the end of every chapter Features an electronic solutions manual Offers techniques applicable across a range of disciplines

Developing Leadership Talent

This report examines the links between inequality and other major global trends (or megatrends), with a focus on technological change, climate change, urbanization and international migration. The analysis pays particular attention to poverty and labour market trends, as they mediate the distributional impacts of the major trends selected. It also provides policy recommendations to manage these

megatrends in an equitable manner and considers the policy implications, so as to reduce inequalities and support their implementation.

U.S. Tax Guide for Aliens

This edited volume builds on the previously published *Self-Initiated Expatriation: Individual, Organizational, and National Perspectives*, which served to give in-depth insights into the concept and the processes of self-initiated expatriation and presented different groups undertaking self-initiated foreign career moves. While more than a hundred articles on self-initiated expatriation (SIE) have been published in the meanwhile, an examination of the research questions and samples of SIEs in published SIE research shows that the role of context and its impact on SIEs' career-related decisions and behaviors has not been explored sufficiently. This raises the question in how far existing research results are comparable. The aim of this follow-up volume is to deepen the understanding of SIEs' careers, focusing on the contextual influences of space, time, and institutions on the heterogeneous SIE population. More specifically, the editors aim to shed light on spatial conditions in terms of the home and host country conditions on the self-initiated expatriation experience and examine developments over time in terms of temporality of conditions and SIEs' life-course. Moreover, the influence of the institutional context in terms of occupational, organisational, and societal specificities will be analysed. All chapters are based on strong theoretical foundations that serve to

conceptualise "context" and are written by both established and emerging global academics and researchers. *Self-Initiated Expatriates in Context* contributes to conceptual clarity in the burgeoning field of SIE research by drawing attention to the importance of exploring context and, thus, boundary conditions to careers. It offers specific guidance for an improvement of future SIE-related research in order to enhance the validity of future empirical studies as well as for an improvement of managerial practice. It will be of interest to researchers, academics, practitioners, and students in the fields of international business, human resource management, organisational studies, and strategic management.

Getting to Yes

"The economics of American higher education are driven by one key factor--the availability of students willing to pay tuition--and many related factors that determine what schools they attend. By digging into the data, economist Nathan Grawe has created probability models for predicting college attendance. What he sees are alarming events on the horizon that every college and university needs to understand. Overall, he spots demographic patterns that are tilting the US population toward the Hispanic southwest. Moreover, since 2007, fertility rates have fallen by 12 percent. Higher education analysts recognize the destabilizing potential of these trends. However, existing work fails to adjust headcounts for college attendance probabilities and makes no systematic attempt to distinguish demand by institution type. This book analyzes demand forecasts by institution type and rank, disaggregating by demographic groups. Its findings often contradict the dominant narrative: while many schools face painful contractions, demand for elite schools is expected to grow by 15+ percent. Geographic and racial profiles will shift only slightly--and attendance by Asians, not Hispanics, will grow most. Grawe also use the model to consider possible changes in institutional recruitment strategies and government policies.

These "what if" analyses show that even aggressive innovation is unlikely to overcome trends toward larger gaps across racial, family income, and parent education groups. Aimed at administrators and trustees with responsibility for decisions ranging from admissions to student support to tenure practices to facilities construction, this book offers data to inform decision-making--decisions that will determine institutional success in meeting demographic challenges"--

Rich Dad's Retire Young, Retire Rich

This report delves into the implications for communities at risk of losing their primary source of credible news. By documenting the shifting news landscape and evaluating the threat of media deserts, this report seeks to raise awareness of the role interested parties can play in addressing the challenges confronting local news and democracy. The Expanding News Desert documents the continuing loss of papers and readers, the consolidation in the industry, and the social, political and economic consequences for thousands of communities throughout the country. It also provides an update on the strategies of the seven large investment firms--hedge and pension funds, as well as private and publicly traded equity groups--that swooped in to purchase hundreds of newspapers in recent years and explores the indelible mark they have left on the newspaper industry during a time of immense disruption.

Landing a Library Job

Just Mercy

Why small business is not the basis of American prosperity, not the foundation of American democracy, and not the champion of job creation. In this provocative book, Robert Atkinson and Michael Lind argue that small business is not, as is widely claimed, the basis of American prosperity. Small business is not responsible for most of the country's job creation and innovation. American democracy does not depend on the existence of brave bands of self-employed citizens. Small businesses are not systematically discriminated against by government policy makers. Rather, Atkinson and Lind argue, small businesses are not the font of jobs, because most small businesses fail. The only kind of small firm that contributes to technological innovation is the technological start-up, and its success depends on scaling up. The idea that self-employed citizens are the foundation of democracy is a relic of Jeffersonian dreams of an agrarian society. And governments, motivated by a confused mix of populist and free market ideology, in fact go out of their way to promote small business. Every modern president has sung the praises of small business, and every modern president, according to Atkinson and Lind, has been wrong. Pointing to the advantages of scale for job creation, productivity, innovation, and virtually all other economic benefits, Atkinson and Lind argue for a "size neutral" policy approach both in the United States and around the world that would encourage growth rather than enshrine an anachronism. If we overthrow the "small is beautiful" ideology, we will be able to recognize large firms as the engines of progress and prosperity that they are.

The Expanding News Desert

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health

inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Bryan Stevenson was a young lawyer when he founded the Equal Justice Initiative, a legal practice dedicated to defending those most desperate and in need: the poor, the wrongly condemned, and women and children trapped in the farthest reaches of our criminal justice system. One of his first cases was that of Walter McMillian, a young man who was sentenced to die for a notorious murder he insisted he didn’t commit. The case drew Bryan into a tangle of conspiracy, political machination, and legal brinkmanship—and transformed his understanding of

mercy and justice forever. Just Mercy is at once an unforgettable account of an idealistic, gifted young lawyer's coming of age, a moving window into the lives of those he has defended, and an inspiring argument for compassion in the pursuit of true justice. The Chapo Guide to Revolution

“A flawless compendium of flaws.” —Alice Roberts, PhD, anatomist, writer, and presenter of *The Incredible Human Journey* The antidote to fuzzy thinking, with furry animals! Have you read (or stumbled into) one too many irrational online debates? Ali Almosawi certainly had, so he wrote *An Illustrated Book of Bad Arguments*! This handy guide is here to bring the internet age a much-needed dose of old-school logic (really old-school, a la Aristotle). Here are cogent explanations of the straw man fallacy, the slippery slope argument, the ad hominem attack, and other common attempts at reasoning that actually fall short—plus a beautifully drawn menagerie of animals who (adorably) commit every logical faux pas. Rabbit thinks a strange light in the sky must be a UFO because no one can prove otherwise (the appeal to ignorance). And Lion doesn’t believe that gas emissions harm the planet because, if that were true, he wouldn’t like the result (the argument from consequences). Once you learn to recognize these abuses of reason, they start to crop up everywhere from congressional debate to YouTube comments—which makes this geek-chic book a must for anyone in the habit of holding opinions.

Various tax planning and controversy considerations also are discussed"--Portfolio description (p. iii).

Communities in Action

The promise of public education is excellence for all. But that promise has seldom been kept for low-income children of color in America. In *How the Other Half Learns*, teacher and education journalist Robert Pondiscio focuses on Success Academy, the network of controversial charter schools in New York City founded by Eva Moskowitz, who has created something unprecedented in American education: a way for large numbers of engaged and ambitious low-income families of colour to get an education for their children that equals and even exceeds what wealthy families take for granted. Her results are astonishing, her methods unorthodox. Decades of well-intended efforts to improve our schools and close the 'achievement gap' have set equity and excellence at war with each other: If you are wealthy, with the means to pay private school tuition or move to an affluent community, you can get your child into an excellent school. But if you are poor and black or brown, you have to settle for 'equity a

acid or some bullsh*t like that.” —Tim Heidecker The creators of the cult-hit podcast Chapo Trap House deliver a manifesto for everyone who feels orphaned and alienated—politically, culturally, and economically—by the lanyard-wearing Wall Street centrism of the left and the lizard-brained atavism of the right: there is a better way, the Chapo Way. In a guide that reads like “a weirder, smarter, and deliciously meaner version of The Daily Show’s 2004 America (The Book)” (Paste), Chapo Trap House shows you that you don’t have to side with either sinking ships. These self-described “assholes from the internet” offer a fully ironic ideology for all who feel politically hopeless and prefer broadsides and tirades to reasoned debate. A book that’s “as intellectually serious and analytically original as it is irreverent and funny” (Glenn Greenwald, New York Times bestselling author of No Place to Hide) The Chapo Guide to Revolution features illustrated taxonomies of contemporary liberal and conservative characters, biographies of important thought leaders, “never before seen” drafts of Aaron Sorkin’s Newsroom manga, and the ten new laws that govern Chapo Year Zero (everyone gets a dog, billionaires are turned into Soylent, and logic is outlawed). If you’re a fan of sacred cows, prisoners being taken, and holds being barred, then this book is NOT for you. However, if you feel disenfranchised from the political and cultural

nightmare we're in, then Chapo, let's go...

From 2020 Democratic presidential candidate Andrew Yang, a captivating account of how "a skinny Asian kid from upstate" became a successful entrepreneur, only to find a new mission: calling attention to the urgent steps America must take, including Universal Basic Income, to stabilize our economy amid rapid technological change and automation. The shift toward automation is about to create a tsunami of unemployment. Not in the distant future--now. One recent estimate predicts 45 million American workers will lose their jobs within the next twelve years--jobs that won't be replaced. In a future marked by restlessness and chronic unemployment, what will happen to American society? In *The War on Normal People*, Andrew Yang paints a dire portrait of the American economy. Rapidly advancing technologies like artificial intelligence, robotics and automation software are making millions of Americans' livelihoods irrelevant. The consequences of these trends are already being felt across our communities in the form of political unrest, drug use, and other social ills. The future looks dire-but is it unavoidable? In *The War on Normal People*, Yang imagines a different future--one in which having a job is distinct from the capacity to prosper and seek fulfillment. At this vision's core is Universal Basic Income, the concept of providing all citizens with a guaranteed income-and one that is rapidly gaining popularity among forward-thinking politicians and economists. Yang proposes that UBI is an essential step toward a new, more durable kind of economy, one he calls "human capitalism."
