Dante's metaphysics--his understanding of reality--is very different from our own. To present Dante's ideas about the cosmos, or God, or salvation, or history, or poetry within the context of post-Enlightenment presuppositions, as is usually done, is thus to capture only imperfectly the essence of those ideas. The recovery of Dante's metaphysics is essential, argues Christian Moevs, if we are to resolve what has been called "the central problem in the interpretation of the Comedy ." That problem is what to make of the Comedy 's claim to the "status of revelation, vision, or experiential record--as something more than imaginative literature." In this book Moevs offers the first sustained treatment of the metaphysical picture that grounds and motivates the Comedy , and of the relation between those metaphysics and Dante's poetics. He carries this out through a detailed examination of three notoriously complex cantos of the Paradiso , read against the background of the Neoplatonic and Aristotelian tradition from which they arise. Moevs finds the key to the Comedy 's metaphysics and poetics in the concept of creation, which implies three fundamental insights into the nature of reality: 1) The world (finite being) is radically contingent, dependent at every instant on what gives it being. 2) The relation between the world and the ground of its being is non-dualistic. (God is not a thing, and there is nothing the world is "made of") 3) Human beings are radically free, unbound by the limits of nature, and thus can find all of time and space within themselves. These insights are the foundation of the pilgrim Dante's journey from the center of the world to the Empyrean which contains it. For Dante, in sum, what we perceive as reality, the spatio-temporal world, is a creation or projection of conscious being, which can only be known as oneself. Moevs argues that self-knowledge is in fact the keystone of the Aristotelian and Neoplatonic philosophical tradition, and the essence of the Christian revelation in which that tradition culminates. Armed with this new understanding, Moevs is able to shed light on a series of perennial issues in the interpretation of the Comedy . In particular, it becomes clear that poetry coincides with theology and philosophy in the poem: Dante poeta cannot be distinguished from Dante theologus .

Most Christians are not aware that their faith has been favored with not just one work of Scripture, the Bible, but with two – a second one, The Urantia Book, was published in modern English in 1955, and it runs to 2,100 pages. It is what we here refer to as a pandect, meaning a comprehensive treatise of scholarly probity and as such it is generally accepted in its entirety as coherent and valid. Since 1955 this tome sold about a million copies, in some fifteen countries, in twenty languages. And that in spite of its being quite heavy reading. It took about twenty years to go from composition to publication, and very few people, after spending some time with it, doubt its being authentic revelation. It is consistent, coherent, beyond scientific challenge; and its tone is impeccably religious. Our purpose in this book is to help people in general to understand and benefit from that one. May Jesus and his helpers be with you in our joint enterprise. N.P. Snoek

The Complete Fighter's Handbook

For decades researchers and programmers have used SAS to analyze, summarize, and report clinical trial data. Now Chris Holland and Jack Shostak have updated their popular Implementing CDISC Using SAS, the first comprehensive book on applying clinical research data and metadata to the Clinical Data Interchange Standards Consortium (CDISC) standards. Implementing CDISC Using SAS: An End-to-End Guide, Revised Second Edition, is an all-inclusive guide on how to implement and analyze the Study Data Tabulation Model (SDTM) and the Analysis Data Model (ADaM) data and prepare clinical trial data for regulatory submission. Updated to reflect the 2017 FDA mandate for adherence to CDISC standards, this new edition covers creating and using metadata, developing conversion specifications, implementing and validating SDTM and ADaM data, determining solutions for legacy data conversions, and preparing data for regulatory submission. The book covers products such as Base SAS, SAS Clinical Data Integration, and the SAS Clinical Standards Toolkit, as well as JMP Clinical. Topics included in this edition include an implementation of the Define-XML 2.0 standard, new SDTM domains, validation with Pinnacle 21 software, event narratives in JMP Clinical, SDTM and ADaM metadata spreadsheets, and of course new versions of SAS and JMP software. The second edition was revised to add the latest C-Codes from the most recent release as well as update the make_define macro that accompanies this book in order to add the capability to handle C-Codes. The metadata spreadsheets were updated accordingly. Any manager or user of clinical trial data in this day and age is likely to benefit from knowing how to either put data into a CDISC standard or analyzing and finding data once it is in a CDISC format. If you are one such person--a data manager, clinical and/or statistical programmer, biostatistician, or even a clinician--then this book is for you.
