Wired for War

The book deals extensively with restoration/manufacturing technology of spare parts and planned maintenance. The workshop and its products are as good as the machines in it. The proper maintenance of the machines as also their accuracy contributes not only to the efficiency of the workshop but to its good reputation. The contents of the book cover the whole range of preventive maintenance and manufacturing technology of spare parts. Detailed instructions, wherever called for, have been listed under the appropriate chapters.

Carbonate Reservoir Characterization

Knowledge Making

This innovative study presents concepts and problems in soil physics, and provides solutions using original computer programs. It provides a close examination of physical environments of soil, including an analysis of the movement of heat, water and gases. The authors employ the programming language Python, which is now widely used for numerical problem solving in the sciences. In contrast to the majority of the literature on soil physics, this text focuses on solving, not deriving, differential equations for transport. Using numerical procedures to solve differential equations allows the solution of quite difficult problems with fairly simple mathematical tools. Numerical methods convert differential into algebraic equations, which can be solved using conventional methods of linear algebra. Each chapter introduces a soil physics concept, and

proceeds to develop computer programs to solve the equations and illustrate the points made in the discussion. Problems at the end of each chapter help the reader practise using the concepts introduced. The text is suitable for advanced undergraduates, graduates and researchers of soil physics. It employs an open source philosophy where computer code is presented, explained and discussed, and provides the reader with a full understanding of the solutions. Once mastered, the code can be adapted and expanded for the user's own models, fostering further developments. The Python tools provide a simple syntax, Object Oriented Programming techniques, powerful mathematical and numerical tools, and a user friendly environment.

P. W. Singer explores the greatest revolution in military affairs since the atom bomb: the dawn of robotic warfare We are on the cusp of a massive shift in military technology that threatens to make real the stuff of I, Robot and The Terminator. Blending historical evidence with interviews of an amazing cast of characters, Singer shows how technology is changing not just how wars are fought, but also the politics, economics, laws, and the ethics that surround war itself. Travelling from the battlefields of Iraq and Afghanistan to modern-day "skunk works" in the midst of suburbia, Wired for War will tantalise a wide readership, from military buffs to policy wonks to gearheads.

Paper has been the material of bureaucracy, and paperwork performs functions of order, control, and surveillance. Knowledge Making: Historians, Archives and Bureaucracy explores how those functions transform over time, allowing private challenges to the public narratives created by institutions and governments. Paperwork and bureaucratic systems have determined what we know about the past. It seems that now, as the digital is overtaking paper (though mirroring its forms), historians are able to see the significance of the materiality of paper and its role in knowledge making – because it is no longer taken for granted. The contributors to this volume discuss the ways in which public and private institutions – asylums, hospitals, and armies – developed bureaucratic systems which have determined the parameters of our access to the past. The authors present case studies of paperwork in different national contexts, which engage with themes of privacy and public accountability, the beginning of record-keeping practices, and their ‘ends’, both in the sense of their purposes and in what happens to paper after the work has finished, including preservation and curation in repositories of various kinds, through to the place of paper and paperwork in a ‘paperless’ world. The chapters in this book were originally published in a special issue of Rethinking History: The Journal of Theory and Practice.

Contemporary evangelicals have built a "salvation culture" but not a "gospel culture." Evangelicals have reduced the gospel to the message of personal salvation. This book makes a plea for us to recover the old gospel as that which is still new and still fresh. The book stands on four arguments: that the gospel is defined by the apostles in 1 Corinthians 15 as the completion of the Story of Israel in the saving Story of Jesus; that the gospel is found in the Four Gospels; that the gospel was preached by Jesus; and that the sermons in the Book of Acts are the best example of gospeling in the New Testament. The King Jesus Gospel ends with practical suggestions about evangelism and about building a gospel culture.

The G. K. Chesterton Collection [50 Books]

The 10 stories in this collection are narrated by children and adolescents that each have a fascinating grasp of everyday reality. The lush imaginative power of youth is revealed in the stories, as magical elements weave in and out and the narrators take over as creators—inventing imaginary girlfriends, older brothers, and ways to escape the harsh realities of growing up. While coping with the cruel reality of an exterior world in sharp conflict with their most intimate beliefs, the narrators provide lyrical insight into the fantastical realm of children through their first-person tellings.

The landmark work on the social significance of childhood. The original and vastly influential ideas of Erik H. Erikson underlie much of our understanding of human development. His insights into the interdependence of the individuals' growth and historical change, his now-famous concepts of identity, growth, and the life cycle, have changed the way we perceive ourselves and society. Widely read and cited, his works have won numerous awards including the Pulitzer Prize and the National Book Award. Combining the insights of clinical psychoanalysis with a new approach to cultural anthropology, *Childhood and Society* deals with the relationships between childhood training and cultural accomplishment, analyzing the infantile and the mature, the modern and the archaic elements in human motivation. It was hailed upon its first publication as "a rare and living combination of European and American thought in the human sciences" (Margaret Mead, *The American Scholar*). Translated into numerous foreign languages, it has gone on to become a classic in the study of the social significance of childhood.

This new edition of an informative and accessible book guides building surveyors and facilities managers through the key aspects of property maintenance and continues to be of value to both students and practitioners. With the increasing cost of new-build, effective maintenance of existing building stock is becoming ever more important and building maintenance work now represents nearly half of total construction output in the UK. Building Maintenance Management provides a comprehensive profile of the many aspects of property maintenance. This second edition has been updated throughout, with sections on outsourcing; maintenance planning; benchmarking and KPIs; and current trends in procurement routes (including partnering and the growth of PFI) integrated into the text. There is also a new chapter on the changing context within which maintenance is carried out, largely concerned with its relationship to facilities management. More coverage is given of maintenance organisations and there are major updates to relevant aspects of health and safety and to contract forms.

He wrote on philosophy, ontology,

poetry, plays, journalism, public lectures and debates, literary and art criticism, biography, Christian apologetics, and fiction, including fantasy and detective fiction. Chesterton is often referred to as the "prince of paradox". Whenever possible, Chesterton made his points with popular sayings, proverbs, and allegories—first carefully turning them inside out. Chesterton is well known for his reasoned apologetics and even some of those who disagree with him have recognized the universal appeal of such works as *Orthodoxy* and *The Everlasting Man*. Chesterton, as a political thinker, cast aspersions on both progressivism and conservatism, saying, "The whole modern world has divided itself into Conservatives and Progressives. The business of Progressives is to go on making mistakes. The business of the Conservatives is to prevent the mistakes from being corrected." Chesterton routinely referred to himself as an "orthodox" Christian, and came to identify such a position more and more with Catholicism, eventually converting to Roman Catholicism from High Church Anglicanism. George Bernard Shaw, Chesterton's "friendly enemy" said of him, "He was a man of colossal genius".

Following the long tradition of the Schuler Company, the Metal Forming Handbook presents the scientific fundamentals of metal forming technology in a way which is both compact and easily understood. Thus, this book makes the theory and practice of this field accessible to teaching and practical implementation. The first Schuler "Metal Forming Handbook" was published in 1930. The last edition of 1966, already revised four times, was translated into a number of languages, and met with resounding approval around the globe. Over the last 30 years, the field of forming technology has been radically changed by a number of innovations. New forming techniques and extended product design possibilities have been developed and introduced. This Metal Forming Handbook has been fundamentally revised to take account of these technological changes. It is both a text book and a reference work whose initial chapters are concerned to provide a survey of the fundamental processes of forming technology and press design. The book then goes on to provide an in-depth study of the major fields of sheet metal forming, cutting, hydroforming and solid forming. A large number of relevant calculations offers state of the art solutions in the field of metal forming technology. In presenting technical explanations, particular

emphasis was placed on easily under standable graphic visualization. All illustrations and diagrams were compiled using a standardized system of functionally oriented color codes with a view to aiding the reader's understanding.
