Controversies in Local Economic Development

This handbook presents an extensive new overview of African development - past, present and future. It addresses key core themes and topics that are pertinent to the continent's development - including sections on history, health and food, politics, economics, rural and urban development, and development policy and practice. The volume draws on the expertise of over 60 of the world's leading scholars to provide a detailed and up-to-date analysis of the key opportunities and challenges that confront Africa, and how such issues are being addressed. Arranged by key themes, the handbook provides not only a historical understanding of the past, but also political perspectives on the future. The chapters provide critically informed analyses of their topics by drawing upon the latest conceptual viewpoints and applied experiences in Africa in the form of case studies to offer a comprehensive examination of the opportunities, challenges, key debates and future prospects. This handbook is an invaluable state-of-the-art overview and reference concerning many different aspects of Africa's development, which will be of interest to academics in all fields of African studies, and also academics and students working in cognate disciplines such as development studies, geography, history, politics and economics.

Business Practices, Growth And Economic Policy In Emerging Markets

Why decentralise the public employment service? What are the reasons for the increasing reliance on local management approaches in designing and implementing employment policies? These trends are not merely institutional changes, rather they reflect

Entrepreneur and bestselling author of *The Lean Startup*, Eric Ries reveals how entrepreneurial principles can be used by businesses of all kinds, ranging from established companies to early-stage startups, to grow revenues, drive innovation, and transform themselves into truly modern organizations, poised to take advantage of the enormous opportunities of the twenty-first century. In *The Lean Startup*, Eric Ries laid out the practices of successful startups – building a minimal viable product, customer-focused and scientific testing based on a build-measure-learn method of continuous innovation, and deciding whether to persevere or pivot. In *The Startup Way*, he turns his attention to an entirely new group of organizations: established enterprises like iconic multinationals GE and Toyota, tech titans like Amazon and Facebook, and the next generation of Silicon Valley upstarts like Airbnb and Twilio. Drawing on his experiences over the past five years working with these organizations, as well as nonprofits, NGOs, and governments, Ries lays out a system of entrepreneurial management that leads organizations of all sizes and from every industry to sustainable growth and long-term impact. Filled with in-the-field stories, insights, and tools, *The Startup Way* is an essential road map for any organization navigating the uncertain waters of the century ahead.

Annual Report

Globalization has forced international firms to be competitive, innovative, and most importantly, adaptive to the changing economic conditions and consumer behavior, and emerging threats from local firms based in developing countries and emerging markets. These markets also have one of the fastest growth rates in the world given the advancement in technology, the rise in global investments, and the change in culture. As such, the knowledge translation and transfer from advanced countries to emerging markets and vice-versa is of essence; the advanced countries need access to the markets, and the emerging markets need the technology and investments, among others, from advanced countries. It is a win-win strategy to develop competitive advantage for international firms. In this context, the authors, who have significant international business knowledge in developing countries and emerging markets, carefully present a selection of peer-reviewed edited chapters that are research-based, theoretical sound, and managerially relevant. The book serves as an essential tool to study, apply, and analyze the contemporary dynamics in developing and emerging markets as the chapters cover recent and relevant business topics such as talent management, ICT technologies, innovation, artificial intelligence and cybersecurity, business incubation home market, and entry strategies.

The Innovation for Development Report 2009-2010

Enterprise Policy Performance Assessment: Bulgaria 2005

This book examines the role that higher education institutions are currently playing through teaching entrepreneurship and transferring knowledge and innovation to enterprises and discusses how they should develop this role in the future.

Local Economic and Employment Development (LEED) Entrepreneurship and Higher Education

Based on the formation and growth problems of High Technology Small Firms (HTSFs) begun in 1993, this body of work maps the evolution of research in this area through academic research and government policy towards a sector that is the key to future prosperity of developed and developing notational economies throughout the world.

Business Incubators

Industrial Location

Technology Entrepreneurship and Business Incubation analyzes business incubators worldwide through a series of empirical and theoretical papers. The authors examine the extent to which business incubators are influential in situations such as nurturing young technology firms, increasing success of new firms, and in developing an ecosystem around these successes. Also examined is the relationship between business incubators and their resource providers, including venture capitalist firms and government agencies. Edited by Phillip Phan (Johns Hopkins Carey Business School), Sarfraz Mian (State University of New York at Oswego), and Wadid Lamine (Toulouse Business School), all leading figures in the field, this book provides both a theoretical framework to conceptualise ideas and a practical guide to influence best practices and innovation in business incubators.

Business Incubation

UN Millennium Project: Innovation

Washington University Journal of Law and Policy

Science & Public Policy

The relative importance of various drivers of economic growth and prosperity has evolved over time and for a growing number of countries, innovation, in its many dimensions, is emerging as a leading factor. The Innovation for Development Report provides a comprehensive look at the role of innovation in enhancing the development process.

United States Political Science Documents

The Millennium Development Goals, adopted at the UN Millennium Summit in 2000, are the world's targets for dramatically reducing extreme poverty in its many dimensions by 2015 income poverty, hunger, disease, exclusion, lack of infrastructure and shelter while promoting gender equality, education, health and environmental sustainability. These bold goals can be met in all parts of the world if nations follow through on their commitments to work together to meet them. Achieving the Millennium Development Goals offers the prospect of a more secure, just, and prosperous world for all. The UN Millennium Project was commissioned by

United Nations Secretary-General Kofi Annan to develop a practical plan of action to meet the Millennium Development Goals. As an independent advisory body directed by Professor Jeffrey D. Sachs, the UN Millennium Project submitted its recommendations to the UN Secretary General in January 2005. The core of the UN Millennium Project's work has been carried out by 10 thematic Task Forces comprising more than 250 experts from around the world, including scientists, development practitioners, parliamentarians, policymakers, and representatives from civil society, UN agencies, the World Bank, the IMF, and the private sector. This report argues that meeting the Millennium Development Goals will require a substantial reorientation of development policies to focus on key sources of economic growth, particularly the use of scientific and technological knowledge and related institutional adjustments. It outlines key areas for policy action, including focusing on platform or generic technologies; defining infrastructure services as a foundation for technology; improving higher education in science and placing universities at the center of local development; spurring entrepreneurial activities; improving the policy environment; and focusing on areas of under-funded research for development.

New Technology-based Firms in the New Millennium

UN Millennium Development Library: Innovation

This volume is the result of a comparative investigation that contrasts micro-systems of innovation in several regions of China and Australia - two vastly different countries in terms of traditions, industry structures, political systems and economic organization. Six regional studies comprehensively document the experiences of firms engaged in product or process innovation. The book also examines the institutions that support research and development and the impact of government policies on innovation in each of the regions studied.

Innovation

Location is vital to the efficiency and profitability of industrial activity. Industrial Location presents a comprehensive introduction to and critical review of this field of growing academic and business interest. In business, the right choices have to be made to produce profit. Industrial location is a fixed investment, crucial to the strategy and capital investment of any organization. Location also impacts upon non-investors, directly affecting employment, the environment, and economic activity in the locale. Focusing chiefly on the United States, but drawing on an international range of cases, the authors explain the economic, social and political forces which have shaped contemporary patterns of industrialization and

examines the changing nature of production and systems.

Policy Studies Review

Action Plan for Implementation of the EAC Industrialization Policy and Strategy 2012-2017

In this book, Hanadi Mubarak, Ali Husain and Michael promote the concept of innovation incubators from a business-management perspective. The book

provides a comprehensive roadmap for the development of new economies based on technology, as well as value added in technology transfer, innovation development and an entrepreneurial climate. Many books on innovation and entrepreneurship take a theoretical approach, presenting a selection of examples that may not reflect reality. However, this compendium of innovation and entrepreneurship case studies is based on the practical experience of executives and managers regarding the undertaking of projects within their industry and company. It is this practical approach, emphasizing enterprise-wide projects as a consequence of the current economic reality that differentiates this book from conventional texts on innovation and entrepreneurship. This investigation uses successful international case studies based on models in developed and developing countries. It argues that innovation incubators must be adopted by Arab countries to support diversification of their economies, the commercialization of new technologies, job creation and foster an entrepreneurial climate. The book presents research and case studies, which provide new insights into practices for undertaking projects that both executive and project managers will find interesting and useful for the advancement of their enterprises, particularly in the area of innovation and entrepreneurship.

Relationship of Public-private Partnership Activities in the Small Business Incubator in Michigan to Small Business

Success

Assesses the comprehensive SME policies introduced by the Mexican Government during the past six years aimed at improving the efficiency and competitiveness of Mexican SMEs by reducing barriers to entrepreneurial activity.

Industrial Development And Economic Policy

SMEs in Mexico

Efforts to promote the economic development of individual localities engage the attention of academics, students and professionals. Many such analysts argue that competitive advantage can be fostered within local economies, complimenting the advent of a more globalised economy. Intensified efforts to build new economic foundations show no sign of abating despite the apparent increase in the international mobility of businesses and employment. Unpicking the arguments supporting different strategies for promoting local economic development, Controversies in Local Economic Development is an introductory guide to some of the major ideas and policy tools that have influenced academic debate and development practice. Taking the view that economic processes are mechanisms

that promote desired outcomes only in particular contexts, the book asks questions of both academic debates and the prescriptions of policy experts.

A Comprehensive Guide to Business Incubation

Designed for upper-level and professional courses, this text is a state-of-the-art introduction to the public policymaking process that gives equal attention to issues of policy implementation and public governance. It uses an innovative systems approach, integrating the activities, actors, tools, and techniques of policymaking, to provide a comprehensive framework for policy design and analysis. The book is practice-oriented, with a focus on the ways that policymakers at all levels employ the standard technologies of governance--authority, agency, program, rule, contract, and budget--to design policy outputs and achieve policy outcomes. Through extensive use of graphics, the text makes concepts easy to grasp for a generation of students accustomed to the visual presentation of ideas. Case studies illustrate the tools and techniques discussed, and key terms, questions for discussion, and suggested readings round out each chapter. Among the many emerging issues covered in this text that will be especially relevant for upper-level and professional programs and student-practitioners are: --program design --performance management --public contracting --policy networks --venue shopping --commercial and nonprofit sector participation in the policymaking process.
