Land Reform and Biodiversity Conservation in South Africa

Peterson's Graduate Programs in the Physical Sciences, Mathematics, Agricultural Sciences, the Environment & Natural Resources contains a wealth of information on colleges and universities that offer graduate work in these exciting fields. The institutions listed include those in the United States and Canada, as well international institutions that are accredited by U.S. accrediting bodies. Up-to-date information, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and unit head and application contact information. Readers will find helpful links to in-depth descriptions that offer additional detailed information about a specific

program or department, faculty members and their research, and much more. In addition, there are valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies.

Tourism and the Millennium Development Goals

Natures of Colonial Change

Draft of probable environmental impacts of offshore oil and gas field developments in the Chuckchi Sea off northwest Alaska including oil spills and effects on marine mammals, and effect on commercial and subsistence fishing.

Parliamentary Papers

In 2000 United Nations adopted the Millennium Development Goals (UN MDGs), committing the member nations to a new global partnership to

Online Library Cape Environmental Studies Past Papers

reduce extreme poverty and setting out a series of specific targets with a deadline of 2015. Related to the UN MDGs, tourism is increasingly seen as a promising tool for poverty reduction, ensuring environmental sustainability and developing a global partnership for development, for example. Thus, the industry has become an important policy tool for community and regional development in many developing countries and the expectations for tourism and its social and economic outcomes have evolved to a high level. However, there are still many challenges to overcome in the relationship between tourism industry, development and poverty reduction. This book aims to discuss the promises, challenges and outcomes of tourism in development with a specific aim of drawing together research related to tourism and UN MDGs. The papers discuss what lessons can be learnt and conclusions drawn from the utilisation of tourism for development and poverty reduction. What emerges from this collection is a set of interesting results and notions which both support and challenge the connections between tourism and development and the new role of tourism in global development. This book is an extended version of a special issue published in *Current Issues in Tourism*.

National Union Catalog

In a world characterized by an encroaching homogeneity induced by the growth of multi-national corporations and globalization, the causes of difference accrue new levels of importance. This is as true of tourism as in many other spheres of life – and

Online Library Cape Environmental Studies Past Papers

one cause of differentiation for tourism promotion is the culture of Indigenous Peoples. This offers opportunities for cultural renaissance, income generation and enhanced political empowerment, but equally there are possible costs of creating commodities out of aspects of life that previously possessed spiritual meaning. This book examines these issues from many different perspectives; from those of product design and enhancement; of the aspirations of various minority groupings; and the patterns of displacements that occur – displacements that are not simply spatial but also social and cultural. How can these changes be managed? Case studies and analysis is offered, derived from many parts of the globe including North America, Asia and Australasia. The contributors themselves have, in many instances, worked closely with groups and organizations of Indigenous Peoples and attempt to give voice to their concerns. The book is divided into various themes, each with a separate introduction and commentary. The themes are Visitor Experiences, Who manages Indigenous Cultural Tourism Product, Events and Artifacts, Conceptualisation and Aspiration. In a short final section the silences are noted – each silence representing a potential challenge for future research to build upon the notions and lessons reported in the book. The book is edited by Professor Chris Ryan from New Zealand, and Michelle Aicken of Horwath Asia Pacific.

JOHN MUIR: Wilderness Essays, Environmental Studies, Memoirs & Letters (With Original Illustrations)

A record of contributions from the National Herbarium, Union of South Africa, Pretoria.

ESSA Professional Paper

The most comprehensive single volume ever assembled for the environmental professional--a one-stop, all-under-one-roof overview of environmental engineering subject areas, and a task-simplifying toolkit designed to simplify day-to-day decisions. Covers the varied topics of interest for today's environmental scientist: mathematical modeling, statistics, plant pathology, as well as engineering problem-solving, management decision-making, and public communication. The perfect resource for biologists, hydrologists, geologists, engineers, chemists, and toxicologists. Packed with numerous tables, charts, illustrations, sampling methods, monitoring methods, testing methods, control techniques, equipment maintenance procedures, and calculation methods. Includes lesson-filled editorial commentary by many of the nearly 100 environmental scientists who have contributed to this book.

by Samuel Hall Young John Muir (1838-1914) was a Scottish-American naturalist, author, environmental philosopher and early advocate of preservation of wilderness in the United States. His letters, essays, and books telling of his adventures in nature, especially in the Sierra Nevada mountains of California, have been read by millions. His activism helped to preserve the Yosemite Valley, Sequoia National Park and other wilderness areas. The Sierra Club, which he founded, is a prominent American

perspective on the integration of economic theories and environmental challenges in this treatise on implementing policies that support sustainable development.

Australian Aboriginal Studies

South Africa's Cape Floristic Region includes approximately 8,500 plant species. Most of this biodiversity is concentrated in fynbos, a fire-prone shrubland occurring on the sandy, infertile soils which predominate in this region. This book reviews a decade of rigorous research into the biogeography, ecology and management of fynbos, carried out under the auspices of the Fynbos Biome Project.

Research Paper

The book advances knowledge about climate change adaptation practices through a series of case studies. It presents important evidence about adaptation practices in agriculture, businesses, the coastal zone, community services, disaster management, ecosystems, indigenous populations, and settlements and infrastructure. In addition to 38 case studies across these sectors, the book contains horizon-scoping essays from international experts in adaptation research, including Hallie Eakin, Susanne Moser, Jonathon Overpeck, Bill Solecki, and Gary Yohe. Australia's social-ecological systems have a long history of adapting to climate variability and change, and in recent decades has been a world-leader in implementing and researching adaptation, making this

book of universal relevance to all those working to adapt our environment and societies to climate change.

Environment of the Cape Thompson Region, Alaska

Innovation Strategies in Environmental Science introduces and examines economically viable innovations to optimize performance and sustainability. By exploring short and long-term strategies for the development of networks and platform development, along with suggestions for open innovation, chapters discuss sustainable development ideas in key areas such as urban management/eco-design and conclude with case studies of end-user-inclusive strategies for the water supply sector. This book is an important resource for environmental and sustainability scientists interested in introducing innovative practices into their work to minimize environmental impacts. Presents problem-oriented research and solutions Offers strategies for minimizing or avoiding the environmental impacts of industrial production Includes case studies on topics such as end user-inclusive innovation strategies for the water supply sector

Indigenous Forests and Woodlands in South Africa: People, Policy and Practice provides an up-to-date review of current research and thinking on policies and practices affecting indigenous forests and woodlands in South Africa. Contributions are included

from over eighty authors with broadly different perspectives, expertise and interests, including biologists, economists, sociologists, academics and practitioners. This book will prove useful to researchers, scientists and post-graduate students in southern Africa and further afield, as well as to non-governmental organisations, government officials, policy-makers, development practitioners and those involved in managing and conserving our indigenous forest and woodland heritage.

SANB

Bibliography on Cold Regions Science and Technology

In this groundbreaking study, Jacob A. Tropp explores the interconnections between negotiations over the environment and an emerging colonial relationship in a particular South African context—the Transkei—subsequently the largest of the notorious “homelands” under apartheid. In the late nineteenth century, South Africa’s Cape Colony completed its incorporation of the area beyond the Kei River, known as the Transkei, and began transforming the region into a labor reserve. It simultaneously restructured popular access to local forests, reserving those resources for the benefit of the white settler economy. This placed new constraints on local Africans in accessing resources for agriculture, livestock management, hunting, building materials, fuel, medicine, and ritual practices. Drawing from a

Online Library Cape Environmental Studies Past Papers

diverse array of oral and written sources, Tropp reveals how bargaining over resources—between and among colonial officials, chiefs and headmen, and local African men and women—was interwoven with major changes in local political authority, gendered economic relations, and cultural practices as well as with intense struggles over the very meaning and scope of colonial rule itself. *Natures of Colonial Change* sheds new light on the colonial era in the Transkei by looking at significant yet neglected dimensions of this history: how both “colonizing” and “colonized” groups negotiated environmental access and how such negotiations helped shape the broader making and meaning of life in the new colonial order.

The Ecology of Fynbos

The Herpetofauna of the Weipa Region, Cape York Peninsula

Assessment of the U.S. Outer Continental Shelf Environmental Studies Program reviews the ecological studies done by the Environmental Studies Program of the Minerals Management Service. This program, which has spent \$10 million a year on ecological studies in recent years, is designed to provide information to predict and manage the environmental effects of outer continental shelf oil and gas activities. The book considers studies on marine mammals and endangered species, birds, benthic organisms, fisheries, and marine ecosystems and makes recommendations for future studies.
