Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

Merrill Education invites you to rediscover "Teaching Secondary School Science: Strategies for Developing Scientific Literacy, " Eighth Edition. Still reflecting the latest in learning theory, inquiry, and professional development, this text has new pedagogy that makes it even easier for students to incorporate the hands-on, practical activities and exercises in their own classrooms. Unique Features: Engage your students with Teaching Science Activity features, "Investigating Science Teaching, Engaging in Action Research, " and "Experiencing Ethical Analysis." Located at the ends of the chapters, they provide an opportunity for students to experience science for themselves. Icons highlight new integrated technology resources. Discussions of technology have been updated and woven throughout the text, including Technology margin notes that encourage students to visit the text's website at www.prenhall.com/trowbridge for further research and supplemental science activities. "Guest Editorials" showcase real preservice and inservice science teachers. These editorials appear throughout the text to help illustrate concepts and provide real-world context for students.

Composing with Confidence

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.
