Theory and Practice of Corporate Social Responsibility

Globalization and the accompanying investment facilities available have resulted in rapid popularity for international financial reporting standards (IFRS). However, differences often exist in terms of what firms report, and once inconsistency between tax regulations and financial reporting regulations occur, differences between taxable and accounting practices are inevitable. This book introduces a new approach to corporate financial reporting by investigating goal incongruence (GING) in the context of the principal and agent (PA) setting. The authors argue that improving the method for the disclosure of information would not only increase the quality of corporate financial information and reporting but also reduce the possibility of any GING arising. This book presents the financial implications of international accounting and financial reporting standards (IAS and IFRS), presenting numerous real-life situations, cases, examples and implications to reveal how GING might influence the implementation of corporate financial reporting of profit volumes and sizes, which are the leading drivers of and widely accepted proxies for corporate financial performance.

International Financial Reporting Standards

Financial accounting theory has numerous practical applications and policy implications, for instance, international accounting standard setters are increasingly relying on theoretical accounting concepts in the creation of new standards; and corporate regulators are increasingly turning to various conceptual frameworks of accounting to guide regulation and the interpretation of accounting practices. The global financial crisis has also led to a new found appreciation of the social, economic and political importance of accounting concepts generally and corporate financial reporting in particular. For instance, the fundamentals of capital market theory (i.e. market efficiency) and measurement theory (i.e. fair value) have received widespread public and regulatory attention. This comprehensive, authoritative volume provides a prestige reference work which offers students, academics, regulators and practitioners a valuable resource containing the current scholarship and practice in the established field of financial accounting theory.

The ONE Thing

This is the first and only book to combine the concept of shareholder value creation with the financial reporting process. Readers will discover the clear links between shareholder value creation, the financial accounting statements, and the market value of the firm. Throughout the pages, the authors strike an effective balance among the mechanics underlying the preparation of the statements, the measurement issues behind the mechanics, and the economic context in which the statements are prepared and used.

Financial accounting, reporting and regulation is a vast subject area of huge global importance, with interest rising significantly in the light of the ongoing global financial crisis. in financial reporting and the costs and benefits of disclosure. Corporate Financial Reporting

International Financial Reporting Standards: A Framework-based Perspective links broad concepts and general accounting principles to the specific requirements of IFRS to help students develop and understand the judgments required in using a principle-based standard. Although it is still unclear whether the US will adopt IFRS, the global business environment makes it necessary for accounting students and professionals to be bilingual in both US GAAP and IFRS. This comprehensive textbook offers: A clear presentation of the concepts underlying IFRS A conceptual framework to guide students in interpreting and applying IFRS rules A comparison between IFRS and US GAAP to develop students' understanding of the requirements of each standard Real world examples and case studies to link accounting theory to practice, while also exposing students to different interpretations and applications of IFRS End of chapter material covering other aspects of financial reporting, including international auditing standards, international ethics standards, and corporate governance and enforcement, as well as emerging topics, such as integrated accounting, sustainability and social responsibility accounting and new forms of financial reporting Burton & Jermakowicz have crafted a thorough and extensive tool to give students a competitive edge in understanding, and applying IFRS. A companion website provides additional support for both students and instructors.

Accounting for the Environment

The Internet bubble has collapsed and the largest bankruptcy in US history, Enron, has made the call for greater transparency in financial reporting more important than ever. Andrew Higson draws attention to what is a 'true and fair view' in reporting and critically examines accounting theory and modern practice.

Corporate Financial Reporting - Theory Practice & Cases 3Rd/Ed.

We have spent a great deal of time on the continued development of accounting and auditing standards, which are used as a primary component of corporate reporting, to reach today's financial reporting framework. However, is it possible to say that, currently, financial statements provide full and prompt disclosure? Or will they still be useful as a primary element with their current structures in corporate reporting? Undoubtedly, we are deeply concerned about these issues in recent times. This volume contains chapters to discuss the today's and tomorrow's accounting and corporate reporting phenomena in a comprehensive and multidimensional way. Therefore, this book is organized into six sections: "Achieving Sustainability through Corporate Reporting", "International Standardization", "Financial Reporting Quality", "Accounting Profession and

Behavioral Aspects", "Public Sector Accounting and Reporting", and "Managerial Accounting".

Corporate Financial Reporting

A History of Corporate Financial Reporting provides an understanding of the procedures and practices which constitute corporate financial reporting in Britain, at different points of time, and how and why those practices changed and became what they are now. Its particular focus is the external financial reporting practices of joint stock companies. This is worth knowing about given the widely held view that Britain (i) pioneered modern financial reporting, and (ii) played a primary role in the development of both capital markets and professional accountancy. The book makes use of a principal and agent framework to study accounting's past, but one where the failure of managers always to supply the information that users' desire is given full recognition. It is shown that corporate financial reporting did not develop into its current state in a straightforward and orderly fashion. Each era produces different environmental conditions and imposes new demands on accounting. A proper understanding of accounting developments therefore requires a careful examination of the interrelationship between accountants and accounting techniques on the one hand and, on the other, the social and economic context within which changes took place. The book's corporate coverage starts with the legendary East India Company, created in 1600, and continues through the heyday of the statutory trading companies founded to build Britain's canals (commencing in the 1770s) and railways (commencing c.1829) to focus, principally, on the limited liability company fashioned by the Joint Stock Companies Act 1844 and the Limited Liability Act 1855. The story terminates in 2005 when listed companies were required to prepare their consolidated accounts in accordance with International Financial Reporting Standards, thus signalling the effective end of British accounting.

Financial Accounting and Reporting

Financial Reporting & Analysis (FR&A) by Revsine/Collins/Johnson/Mittelstaedt emphasizes both the process of financial reporting and the analysis of financial statements. This book employs a true "user" perspective by discussing the contracting and decision implications of accounting and this helps readers understand why accounting choices matter and to whom. Revsine, Collins, Johnson, and Mittelstaedt train their readers to be good financial detectives, able to read, use, and interpret the statements and-most importantly understand how and why managers can utilize the flexibility in GAAP to manipulate the numbers for their own purposes.

Corporate Financial Accounting and Reporting

Although the need to expand the boundaries of financial reporting has been discussed since the mid-1990s, little consideration has been given to the evolution and discourses of integrated reporting of non-financial aspects. Yet by investigating how and why an organisation defines and its reporting boundaries, it is possible to understand what is truly "valued" (or not) in its business model. This

innovative book reviews the guidelines and frameworks from the major relevant international organisations including: the International Accounting Standards Board, Global Reporting Initiative, Sustainability Accounting Standards Board, International Integrated Reporting Council, Carbon Disclosure Standards Board, and the World Intellectual Capital Initiative, and analyses their development and impact on the boundaries of financial and non-financial reporting. Illustrated with case studies and interviews with representatives of these organisations, this concise volume makes a significant contribution to the future of reporting theory and practice. It will be of great interest to advanced students, researchers, practitioners and policy makers.

The Routledge Companion to Financial Accounting Theory

The aim of the book is to give non-accounting students a basic ability and confidence to read and use financial accounting reports and statements within their business or financial specialties. Many employees in business today are expected to be conversant with reported accounting information as part of their regular job responsibilities. However, they often have little formal training in using such information. For example, in most Western countries, corporate directors and senior executives are legally responsible for the content and quality of publicly reported accounting statements, yet typically have no accounting background or experience to help in the discharge of these responsibilities. The theme of the book is financial reporting as an essential and significant part of corporate governance. There is continuous pressure on companies from government and stakeholder groups to improve their governance and accountability structures and procedures. This book reveals how financial statements and related disclosures assist in good governance and accountability by providing relevant and reliable accounting signals of managerial performance.

Corporate Finance

This book is concerned with the financial accounting and reporting of publicly owned corporations to their shareholders. It examines the origins of financial accounting and reporting, external influences on accounting and reporting practices as well as the measurement process.

Accounting and Corporate Reporting

This—revised and enhanced—book examines the role of finance in supporting other functional areas while fostering an understanding of how financial decisions can create value. Corporate Finance covers areas related to estimating divisional cost of capital; executing a financing strategy; establishing debt and dividend policies consistent with the company's strategy and environment; choosing between dividends and stock repurchases; managing high growth and managing working capital. Its new topics include: - Corporate Financial Flexibility (Real options) - New Financial Instruments - Project Finance - Acquisitions and Control -

Performance Measurement and Incentive Compensation The goal of this book is to provide a thorough understanding of how and why firms make their financial decisions the way they do and their impact on shareholder value. The central theme of the book is Value Based Management, which assumes that maximizing shareholder value is the governing objective of a firm. Each chapter of this new edition has detailed and real-life cases to help students easily understand and grasp concepts. The author has also provided the case-map of the Harvard Business School to make this book more user-friendly in classrooms. The inclusion of several new topics/cases, extensive pedagogical tools and a finance-for-non-finance approach make this book ideal for MBA/CA/CFA/ICWA students and executive education programs.

Corporate Financial Reporting

The adoption by the Accounting Standards Board of its Statement of Principles for Financial Reporting in December 1999 means that we now have an authoritative conceptual framework which should govern the production of British financial statements. Yet while the text of the Statement is directed at members of the accounting profession, students of accounting will need to understand the framework and its repercussions. An Introduction to Modern Financial Reporting Theory explains the content of the Statement in an accessible language, specifically for the student of accounting and finance. This text will be of direct and practical interest to students who need to understand the contents of the new framework, which helps to explain: why and how financial reporting is carried out; why financial statements are prepared in the way that they are; why accounting standards specify one method rather than another; how the methods specified by accounting standards relate to each other; how practice has developed and will continue to develop. Brian Rutherford emphasizes and enlarges on the key features of the framework, provides many more examples, shows how the framework applies in practice and also offers some criticisms of its content. The book clarifies to students why various methods and practices in accounting have evolved, while illustrating how they relate to each other and to the underlying function of financial reporting. This text will be essential reading on university and professional courses in advanced financial accounting, particularly courses on Accounting Theory and Financial Reporting. Brian Rutherford is Professor of Accounting at Canterbury Business School, University Kent at Canterbury.

Financial Accounting Theory

Statement on Accounting Theory and Theory Acceptance

This textbook provides a comprehensive overview of international corporate reporting which enhances students' understanding of diversity and convergence in the field. Other key elements explored throughout the book include assurance through auditing and corporate governance, narrative reporting, strategic and corporate social responsibility, group accounting, current accounting issues and taxation in corporate reports. Indicative research examples show how the methods used in research papers may be understood and applied. This book offers a rigorous, yet accessible, treatment of contemporary financial reporting practice. Examples are drawn from a broad range of companies to illustrate key concepts. Particular emphasis is given to the latitude and flexibility granted to managers in reporting financial performance, and the steps that financial statement readers can take to identify potential trouble areas in the accounts. Topics include the analysis and interpretation of the three principal financial statements, revenue recognition, inventory accounting,

receivables and bad debts, accounting for long-term assets, provisions and contingencies, income taxes, and the accounting for mergers and acquisitions. A unique feature of this book is the seamless way in which it deals with differences in U.S. GAAP and IFRS. Both regimes are covered simultaneously, i.e. when a topic is discussed, including the relevant journal entries and disclosures, the discussion applies equally to GAAP companies and to IFRS companies. It doesn't matter whether the company used in a given example is from the U.S., Europe, or elsewhere. Thanks to the ongoing GAAP/IFRS convergence project, the two regimes are close enough to allow for a somewhat generic approach that allows for coverage of both regimes at the same time. In this way, the examples that are covered in the book are relevant to all readers, regardless of which regime dominates in their business environment. The content of this book has been classroom tested over the past 20 years at INSEAD with the MBA class which has students from 80 different countries.

Financial Reporting and Corporate Governance

`This is a book which should be read by all students, whether undergraduate and postgraduate. It also provides a succinct guide for the manager who wishes to come to grips with this topic, or the accountant nostalgic to recollect the non too praiseworthy and indecisive history of this topic' - Managerial Auditing Journal

Corporate Financial Reporting critically examines contemporary corporate financial reporting. The complexity of the reporting process and the myriad of issues facing the directors, accountants and auditors can only be successfully understood from a firm conceptual base. Recent financial scandals clearly highlight the interrelationships between all the themes explored in this book, from financial reporting to auditing, from management's motivations to fraud. Special features of this book include: - A critical examination of accounting 'theory' - Senior practitioners' insights on 'a true and fair view' - An exploration of 'the financial reporting expectations gap' - A discussion of the nature of 'corporate performance' - An examination of corporate fraud - An examination of the implications of 'real-time' reporting by companies - Discussion questions at the end of each chapter

The book will be relevant to advanced undergraduate as well as postgraduate and MBA students.
