One of the features of the Criteria that is required of a secure system is the enforcement of discretionary access control (DAC). DAC is a means of restricting access to objects based on the identity of subjects and/or groups to which they belong. The controls are discretionary in the sense that a user or process given discretionary access to information is capable of passing that information along to another subject. This guide discusses issues involved in designing, implementing and evaluating DAC mechanisms. Its primary purpose is to provide guidance to manufacturers on how to select and build effective DAC mechanisms.

Science and belief are both very important for us in our 21st century society, so is it really necessary to choose between them? The view that science and belief are in conflict is a major stumbling block for many students today, with further confusion fuelled by the ongoing debate in the press and media. Adding clarity to the situation, Michael Poole explores the interaction between science and religious belief, facing dilemmas and finding unexpected solutions. A substantially rewritten and updated account of a best selling book, the User's Guide to Science and Belief is a clear and concise

introduction to the relationship between science and faith.
