### **International Book Publishing: An Encyclopedia**

This exciting new textbook challenges the implicit notions inherent in most existing International Relations (IR) scholarship and instead presents the subject as seen from different vantage points in the global South. Divided into four sections, (1) the IR discipline, (2) key concepts and categories, (3) global issues and (4) IR futures, it examines the ways in which world politics have been addressed by traditional core approaches and explores the limitations of these treatments for understanding both Southern and Northern experiences of the "international." The book encourages readers to consider how key ideas have been developed in the discipline, and through systematic interventions by contributors from around the globe, aims at both transforming and enriching the dominant terms of scholarly debate. This empowering, critical and reflexive tool for thinking about the diversity of experiences of international relations and for placing them front and center

in the classroom will help professors and students in both the global North and the global South envision the world differently. In addition to general, introductory IR courses at both the undergraduate and graduate levels it will appeal to courses on sociology and historiography of knowledge, globalization, neoliberalism, security, the state, imperialism and international political economy.

This new book, from the editor of the highly successful Pharmaceutical Analysis, sets out to define the area of pharmaceutical chemistry as distinct from medicinal chemistry. It focuses less on prototypes of drugs that perhaps never came to market and more on the drugs currently in use. The emphasis in the book is on the physicochemical properties of drug molecules and, in so far as they are known, the way that these properties govern the interaction of the drug with its

target. Important physicochemical properties include pKa and partition coefficient and the properties of the structural elements within the drug which provide interactions with the target via a range of intermolecular forces. The last fifteen years has seen a great advance in the knowledge of protein structures and a strong emphasis is given to the interaction of drugs with proteins which shape the majority of drug mechanisms.
