Methods in Computational Physics, Volume 16: Controlled Fusion considers the full variety of computer models needed for the simulation of realistic fusion devices. These computer models include time-dependent magnetohydrodynamics, plasma transport in a magnetic field, MHD and guiding-center equilibria, MHD stability of confinement systems, Vlasov and particle models, and multispecies Fokker-Planck codes. This volume is divided into 11 chapters. The first three chapters discuss various aspects of the numerical solution of the equations of magnetohydrodynamics (MHD). The subsequent chapters present the more realistic models, including the thermal conductivity and electrical resistivity. Other chapters describe two-dimensional codes with various choice of coordinate systems, such as fixed Eulerian grid, Lagrangian descriptions, and the use of magnetic flux surfaces as coordinate surfaces. The discussion then shifts to models on the inclusion of neutrals and impurities, as well as the use of empirical transport coefficients. A chapter surveys the development of time-dependent codes to support the design and operation of major CTR experiment. The final chapters explore the electromagnetic codes in the nonradiative limit (Darwin model) where the equations are nonrelativistic and displacement currents are neglected. This book is an invaluable source for geoscientists, physicists, and mathematicians.

Lightbearer

This issue offers the latest information regarding the transmission of hepatitis viruses in various healthcare settings. It delves with a very timely and interesting patient safety subject that specifically targets healthcare professionals, gastroenterologists, hepatologists, oncologists, dentists and all healthcare workers to adopt and share a variety of best practices to prevent this adverse event. Well known faculty in liver disease, infection control as well as a medical practice in a legal setting have been assembled to produce a comprehensive and concise edition that highlights the latest information regarding hepatitis B and C transmission in healthcare. It aims to provide an overview on the molecular epidemiology, the outbreak reports, the transmission in hemodialysis, endoscopy, dental, oncology, management, legal aspects and the infection prevention measures to reduce the risk of needless exposure of patients to these blood borne pathogens.

Agrindex

This issue of Clinics in Geriatric Medicine focuses on the pharmacological, non-pharmacological, and device therapies in the medical management of cardiac rhythm disorders in the elderly population. It also reviews the epidemiology of arrhythmias and conduction disorders in older adults, atrial fibrillation and atrial flutter: stroke prevention, bradyarrhythmias and conduction disorders, and comorbidities, quality of life, and end-of-life issues in older patients with heart rhythm disorders.

Photonics, Volume 1

With the numerous advances that have been made in treatment of heart disease over the past 20 years, physicians are now emphasizing more than ever the prevention of heart disease. This issue provides cardiologists with practical state-of-the-art information on prevention that can be easily applied to their patients. Topics covered include diabetes, lipid-lowering therapy, RAAS blockade, emerging therapies for atherosclerosis prevention, and heart disease in women.

Covering the full spectrum of health conditions seen in the primary care of children, *Pediatric Primary Care, 5th Edition* emphasizes both prevention and management from the unique perspective of the Nurse Practitioner. Written by an expert editor/contributor team, it provides in-depth, evidence-based guidance for assessing and managing health problems in children from infancy through adolescence. Other key topics include developmental theory, the health status of children today, issues of daily living, and cultural considerations. Four-part organization includes an introductory unit, plus units on child development, the health management of children, and diseases and disorders common to childhood. UNIQUE! Functional health patterns framework in Unit Three provides a lens for discussing health promotion through the various components of healthy living. UNIQUE! ICD framework in Unit Four addresses the classification used to code diseases in both hospital and outpatient settings. UNIQUE! Practice management chapter provides need-to-know information on managing a private healthcare practice, including issues of productivity, compliance with applicable laws, quality-of-care indicators, and successful business practices. UNIQUE! Environmental health chapter offers evidence-based content on the effects of environmental toxicants, such as tobacco smoke, heavy metals, and air pollutants. An 8-page color insert presents over 40 photos that visually demonstrate key assessment findings for ear, skin, and other conditions. NEW! Pediatric Pain Management chapter addresses the increased recognition of pain as the "fifth vital sign" with expanded coverage of acute and chronic pain management in children. Extensively revised and updated genetics chapter presents a new paradigm for addressing genetic considerations in clinical practice, including an introduction to epigenetics. Increased emphasis on health disparities explores the growing health disparities among children in the U.S and worldwide and provides strategies to help patients and parents gain accessibility to health care resources. NEW! Content on implementing a "medical home" explores the trend toward family-centered coordinated health care and fosters appropriate treatment for children with chronic

disease. NEW! Updated coverage takes a more global approach, exploring the health status of children outside the U.S. Expanded imaging content offers valuable guidance on using various imaging modalities, including how to prepare the child for diagnostics.

Ultrathin Magnetic Structures I

Groups IV, V, and VI Transition Metals

Bibliotheca Americana: Catalogue of American Publications, Including Reprints and Original Works, from 1820 to [Jan. 1861]

The ability to understand and control the unique properties of interfaces has created an entirely new field of magnetism, with profound impact in technology and serving as the basis for a revolution in electronics. Our understanding of the physics of magnetic nanostructures has also advanced significantly. This rapid development has generated a need for a comprehensive treatment that can serve as an introduction to the field for those entering it from diverse fields, but which will also serve as a timely overview for those already working in this area. The four-volume work Ultra-Thin Magnetic Structures aims to fulfill this dual need. The original two volumes – now available once more – are An Introduction to the Electronic, Magnetic and Structural Properties (this volume) and "Measurement Techniques and Novel Magnetic Properties." Two new volumes, "Fundamentals of Nanomagnetism" and "Applications of Nanomagnetism," extend and complete this comprehensive work by presenting the foundations of spintronics.

Advances in Solid State Physics

Covers modern photonics accessibly and discusses the basic physical principles underlying all the applications and technology of photonics. This volume covers the basic physical principles underlying the technology and all applications of photonics from statistical optics to quantum optics. The topics discussed in this volume are: Photons in perspective; Coherence and Statistical Optics; Complex

Light and Singular Optics; Electrodynamics of Dielectric Media; Fast and slow Light; Holography; Multiphoton Processes; Optical Angular Momentum; Optical Forces, Trapping and Manipulation; Polarization States; Quantum Electrodynamics; Quantum Information and Computing; Quantum Optics; Resonance Energy Transfer; Surface Optics; Ultrafast Pulse Phenomena. Comprehensive and accessible coverage of the whole of modern photonics Emphasizes processes and applications that specifically exploit photon attributes of light Deals with the rapidly advancing area of modern optics Chapters are written by top scientists in their field Written for the graduate level student in physical sciences; Industrial and academic researchers in photonics, graduate students in the area; College lecturers, educators, policymakers, consultants, Scientific and technical libraries, government laboratories, NIH.

Solubility is fundamental to most areas of chemistry and is one of the most basic of thermodynamic properties. It underlies most industrial processes. Bringing together the latest developments and ideas, *Developments and Applications in Solubility* covers many varied and disparate topics. The book is a collection of work from leading experts in their fields and covers the theory of solubility, modelling and simulation, industrial applications and new data and recent developments relating to solubility. Of particular interest are sections on: experimental, calculated and predicted solubilities; solubility phenomena in 'green' quaternary mixtures involving ionic liquids; molecular simulation approaches to solubility; solubility impurities in cryogenic liquids and carbon dioxide in chemical processes. The book is a definitive and comprehensive reference to what is new in solubility and is ideal for researcher scientists, industrialists and academics

Developments and Applications in Solubility

Practical and clinically focused, Abeloff's Clinical Oncology is a trusted medical reference book designed to capture the latest scientific discoveries and their implications for cancer diagnosis and management of cancer in the most accessible manner possible. Abeloff's equips everyone involved - from radiologists and oncologists to surgeons and nurses - to collaborate effectively and provide the best possible cancer care. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. Select the most appropriate tests and imaging studies for cancer diagnosis and staging of each type of cancer, and manage your patients in the most effective way possible by using all of the latest techniques and approaches in oncology. Enhance your understanding of complex concepts with a color art program that highlights key points and illustrates relevant scientific and clinical problems. Stay at the forefront of the latest developments in cancer pharmacology, oncology and healthcare policy, survivorship in cancer, and many other timely topics. See how the most recent cancer research applies to practice through an increased emphasis on the relevance of new scientific discoveries and modalities within disease chapters. Streamline clinical decision making with abundant new treatment and diagnostic algorithms as well as concrete management recommendations. Take advantage of the collective wisdom of preeminent multidisciplinary experts in the field of oncology, including previous Abeloff's editors John E. Niederhuber, James O. Armitage, and Michael B. Kastan as well as new editors James H. Doroshow from the National Cancer Institute and Joel E. Tepper of Gunderson & Tepper: Clinical Radiation Oncology. Quickly and effortlessly access the key information you need with the help of an even more user-friendly, streamlined format. Access the complete contents anytime, anywhere at Expert Consult, and test your mastery of the latest knowledge with 500 online multiple-choice review questions.

Neuroimmunomodulation

Comprehensive Biomaterials brings together the myriad facets of biomaterials into one, major series of six edited volumes that would cover the field of biomaterials in a major, extensive fashion: Volume 1: Metallic, Ceramic and Polymeric Biomaterials Volume 2: Biologically Inspired and Biomolecular Materials Volume 3: Methods of Analysis Volume 4: Biocompatibility, Surface Engineering, and Delivery Of Drugs, Genes and Other Molecules Volume 5: Tissue and Organ Engineering Volume 6: Biomaterials and Clinical Use Experts from around the world in hundreds of related biomaterials areas have contributed to this publication, resulting in a continuum of rich information appropriate for many audiences. The work addresses the current status of nearly all biomaterials in the field, their strengths and weaknesses, their future prospects, appropriate analytical methods and testing, device applications and performance, emerging candidate materials as competitors and disruptive technologies, and strategic insights for those entering and operational in diverse biomaterials applications, research and development, regulatory management, and commercial aspects. From the outset, the goal was to review materials in the context of medical devices and tissue properties, biocompatibility and surface analysis, tissue engineering and controlled release. It was also the intent both, to focus on material properties from the perspectives of therapeutic and diagnostic use, and to address questions relevant to state-of-the-art research endeavors.

Reviews the current status of nearly all biomaterials in the field by analyzing their strengths and weaknesses, performance as well as future prospects Presents appropriate analytical methods and testing procedures in addition to potential device applications Provides strategic insights for those working on diverse application areas such as R&D, regulatory management, and commercial development

The 2002 Spring Meeting of the "Deutsche Physikalische Gesellschaft" was held in Regensburg from March 25th to 29th, 2002. The number of conference attendees has remained remarkably stable at about 2800, despite the decreasing number of German PhD students. This can be taken as an indication that the program of the meeting was very attractive. The present volume of the "Advances in Solid State Physics" contains the written versions of most of the invited talks, also those presented as part of the Symposia. Most of these Symposia were organized by several divisions in collaboration and they covered fascinating selection of topics of current interest. I trust that the book reflects this year's status of the field in Germany. In particular, one notes a slight change in paradigms: from quantum dots and wires to spin transport and soft matter systems in the broadest sense. This seems to reflect the present general trend in physics. Nevertheless, a large portion of the invited papers as well as the discussions at the meeting concentrated on nanostructured matter.
