Fire & Ice presents the educational inquiry process to school practitioners and aspiring leaders. The context for this study is unusual because it addresses inquiry learning at both the master's and doctoral level and within group settings. The picture that emerges illustrates ways for mentors to engage graduate students in learning, writing, and research through collaborative structures, with an emphasis on learning communities as the primary vehicle for growth and success. In the book, graduate students have served as research participants, focus group members, and survey respondents in their dual role as peer mentor. Because graduate education is being challenged to meet the changing needs of the twenty-first century, the influence of the professions on academic degrees has meant that students must develop as scholar practitioners instead of strictly intellectual academics. Metaphorically, the fire (possibility, desire, and content) and ice (restraint, structure, and form) of scholarly inquiry is used as a literary device to capture what it might mean for students to perform inquiry.

During the 1960s, a bushel of B-movies were produced and aimed at the predominantly teenage drive-in movie audience. At first teens couldn't get enough of the bikini-clad beauties dancing on the beach or being wooed by Elvis Presley, but by

1966 young audiences became more interested in the mini-skirted, go-go boot wearing, independent-minded gals of spy spoofs, hot rod movies and biker flicks. Profiled herein are fifty sexy, young actresses that teenage girls envied and teenage boys desired including Quinn O'Hara, Melody Patterson, Hilarie Thompson, Donna Loren, Pat Priest, Meredith MacRae, Arlene Martel, Cynthia Pepper, and Beverly Washburn. Some like Sue Ane Langdon, Juliet Prowse, Marlyn Mason, and Carole Wells, appeared in major studio productions while others, such as Regina Carrol, Susan Hart, Angelique Pettyjohn and Suzie Kaye were relegated to drive-in movies only. Each biography contains a complete filmography. Some also include the actresses' candid comments and anecdotes about their films, the people they worked with, and their feelings about acting. A list of web sites that provide further information is also included.

Welcome to the Snow and Ice Games where competition is not the only thing that is heating up! The fourth book in bestselling Tamsen Parker's romance series continues with two female skaters from opposite sides of the rink. Blaze Bellamy is the bad girl of the short track speed skating world. Looking like a roller derby bruiser when she's not in her Team USA uniform, she's an unlikely American heroine. She's got a punk attitude to match her provocative dress and her dyed hair, and she's determined to get onto the front pages of the papers regardless of how she has to do it. Maisy Harper is the workhorse of the Canadian women's figure skating team. Serious, modest, and above all, polite, Maisy would prefer to win her victory on the ice rather than in the press, and is exasperated by Blaze's antics. When she's not lusting after her anyway. After they both failed to make the medal podium at the last Snow and Ice Games, they drowned themselves in gin—and each other. Despite their hookup being drunken, they both harbor fond memories of their night together and are keen for a repeat. But they've got different ways of going about getting what they want, and Blaze's willingness to go to any lengths for the spotlight could ruin any chance she has with Maisy.

Exploring the science in George R. R. Martin's fantastical world, from the physics of an ice wall to the genetics of the Targaryens and Lannisters. Game of Thrones is a fantasy that features a lot of made-up science—fabricated climatology (when is winter coming?), astronomy, metallurgy, chemistry, and biology. Most fans of George R. R. Martin's fantastical world accept it all as part of the magic. A trained scientist, watching the fake science in Game of Thrones, might think, “But how would it work?” In *Fire, Ice, and Physics*, Rebecca Thompson turns a scientist's eye on Game of Thrones, exploring, among other things, the science of an ice wall, the genetics of the Targaryen and Lannister families, and the biology of beheading. Thompson, a PhD in physics and an enthusiastic Game of Thrones fan, uses the fantasy science of the show as a gateway to some interesting real science, introducing GOT fandom to a new dimension of appreciation. Thompson starts at the beginning, with winter, explaining seasons and the very elliptical orbit of the Earth that might cause winter to come (or not come). She tells us that ice can behave like ketchup, compares regular steel to Valyrian steel, explains that dragons are “bats, but with fire,” and considers Targaryen inbreeding. Finally she offers scientific explanations of the various types of fatal justice meted out, including beheading, hanging, poisoning (reporting that the effects of “the Strangler,” administered to Joffrey at the Purple Wedding, resemble the effects of strychnine), skull crushing, and burning at the stake. Even the most faithful Game of Thrones fans will learn new and interesting things about the show from Thompson's entertaining and engaging account. *Fire, Ice, and Physics* is an essential companion for all future bingeing.

Perfect for fans of *I, Tonya* starring Margot Robbie and Allison Janney, this first full scale biography of Tonya Harding explores one of the most provocative figures in figure skating at the height of the controversy—centered on the 1994 attack on Nancy Kerrigan—that made Harding a household name. Championship figure skating, despite its surface appearance of pristine elegance, is a ferociously competitive sport, full of bitter rivalry and personal antagonism. Olympic glory means everything: fame, money, and the admiration of millions. Every skater who goes for the gold has drive and tremendous competitive spirit, but few more than Tonya Harding. In *Fire on Ice*, you will learn about Harding’s hardscrabble childhood—a childhood racked by abuse, money problems, and unceasing pressure and belittlement by her mother. And you will learn how Tonya Harding made herself into one of America’s best skaters. Here is a young woman whose fierce ambition was, in the end, her downfall. Her story is a tale of sacrifice and overcoming obstacles, of the strength of competition and the blindness of ambition. In the thin ice over which Tonya Harding always glided, we could not help but see an American story, and all of America was watching.

Seattle investigator J. P. Beaumont is working a series of murders in which six young women have been wrapped in tarps,

doused with gasoline, and set on fire. Their charred remains have been scattered around various dump sites, creating a grisly pattern of death across western Washington. At the same time, thousands of miles away in the Arizona desert, Cochise County sheriff Joanna Brady is looking into a homicide in which the elderly caretaker of an ATV park was run over and left to die. All the man has left behind is his dog, who is the improbable witness to some kind of turf warfare—or possibly something more sinister. Then a breakthrough in Beaumont's case leads him directly to the Southwest and into Brady's jurisdiction. When the two met on a joint investigation years earlier, sparks flew. Under different circumstances, both of them admit, even more could have happened. But here, as the threads of their two seemingly separate cases wind together, Beaumont and Brady must put aside echoes of their shared past as they are once again drawn into an orbit of deception. Except this time it's not just their own lives that are in danger but those of the people closest to them as well.
