\*Winner of the Environmental Design Research Association 2016 Place Research Award!\* In *Cognitive Architecture*, the authors review new findings in psychology and neuroscience to help architects and planners better understand their clients as the sophisticated mammals they are, arriving in the world with built-in responses to the environment that have evolved over millennia. The book outlines four main principles---Edges Matter, the fact people are a thigmotactic or a 'wall-hugging' species; Patterns Matter, how we are visually-oriented; Shapes Carry Weight, how our preference for bilateral symmetrical forms is biological; and finally, Storytelling is Key, how our narrative proclivities, unique to our species, play a role in successful place-making. The book takes an inside-out approach to design, arguing that the more we understand human behavior, the better we can design for it. The text suggests new ways to analyze current designs before they are built, allowing the designer to anticipate a user's future experience. More than one hundred photographs and drawings illustrate its key concepts. Six exercises and additional case studies suggest particular topics - from the significance of face-processing in the human brain to our fascination with fractals - for further study.

The book invites readers to consider the theories and methods of three major traditions in critical discourse studies – discourse analysis, critical discourse analysis, and multimodal discourse analysis -- through the empirical work of leading scholars in the field. Beyond providing a useful overview, it contextualizes CDA in a wide range of learning environments and identifies how CDA can shed new insights on learning and social change. Detailed analytic procedures are included – to demystify the process of conducting CDA, to invite conversations about issues of trustworthiness of interpretations and their value to educational contexts, and to encourage researchers to build on the scholarship in

critical discourse studies. This edition features a new structure; a touchstone chapter in each section by a recognized expert (Gee, Fairclough, Kress); and a stronger international focus on both theories and methods. NEW! ## **Shapes, Reshape!**

A body-focused, trauma-informed art therapy that will appeal to art therapists, somatic experiencing practitioners, bodyworkers, artists, and mental health professionals While art therapy traditionally focuses on therapeutic image-making and the cognitive or symbolic interpretation of these creations, Cornelia Elbrecht instructs readers how to facilitate the body-focused approach of guided drawing. Clients draw with both hands and eyes closed as they focus on their felt sense. Physical pain, tension, and emotions are expressed without words through bilateral scribbles. Clients then, with an almost massage-like approach, find movements that soothe their pain, discharge inner tension and emotions, and repair boundary breaches. Archetypal shapes allow therapists to safely structure the experience in a nonverbal way. Sensorimotor art therapy is a unique and self-empowering application of somatic experiencing--it is both body-focused and trauma-informed in approach--and assists clients who have experienced complex traumatic events to actively respond to overwhelming experiences until they feel less helpless and overwhelmed and are then able to repair their memories of the past. Elbrecht provides readers with the context of body-focused, trauma-informed art therapy and walks them through the thinking behind and process of guided drawing--including 100 full-color images from client sessions that serve as helpful examples of the work.

## **The 7 Habits of Happy Kids**

The authors present a social linguistic/social interactional approach to the discourse analysis of classroom language and literacy events. Building on recent theories in interactional sociolinguistics, literary theory, social anthropology, critical discourse analysis, and the New Literacy Studies, they describe a microethnographic approach to discourse analysis that provides a reflexive and recursive research process that continually questions what counts as knowledge in and of the interactions among teachers and students. The approach combines attention to how people use language and other systems of communication in constructing classroom events with attention to social, cultural, and political processes. The focus of attention is on actual people acting and reacting to each other, creating and recreating the worlds in which they live. One contribution of the microethnographic approach is to highlight the conception of people as complex, multi-dimensional actors who together use what is given by culture, language, social, and economic capital to create new meanings, social relationships and possibilities, and to recreate culture and language. The approach presented by the authors does not separate methodological, theoretical, and epistemological issues. Instead, they argue that research always involves a dialectical relationship among the object of the research, the theoretical frameworks and methodologies driving the research, and the situations within which the research is being conducted.

*Discourse Analysis and the Study of Classroom Language and Literacy Events: A Microethnographic Perspective:* \*introduces key constructs and the intellectual and disciplinary foundations of the microethnographic approach; \*addresses the use of this approach to gain insight into three often discussed issues in research on classroom literacy events--classroom literacy events as cultural action, the social construction of identity, and power relations in and through classroom literacy events; \*presents transcripts of classroom literacy events to illustrate how theoretical constructs, the research issue, the research site, methods, research techniques, and previous studies of discourse analysis come together to constitute a discourse analysis; and \*discusses the complexity of "locating" microethnographic discourse analysis studies within the field of literacy studies and within broader intellectual movements. This volume is of broad interest and will be widely welcomed by scholars and students in the field language and literacy studies, educational researchers focusing on analysis of classroom discourse, educational sociolinguists, and sociologists and anthropologists focusing on face-to-face interaction and language use.
