Pedagogic Research in Geography Higher Education

This innovative book exemplifies the importance of sophisticated and intelligent spatial analysis techniques in dealing with the range of location, distribution and channel management issues which face today's retail and service businesses. Explores some of the trends taking place within the broad consumer-retailing sector, drawing on research undertaken in grocery, supermarket retailing, financial services, travel and leisure in Europe, North America and Australasia Numerous global case studies are used to show key issues Details how retailers can begin to develop information and analytical frameworks to better understand what is happening in the retail environment Describes how retailers can plan their cross channel network strategy for the future

Qualitative Research Methods in Human Geography

In eighteenth- and nineteenth-century Britain, books of travel and exploration were much more than simply the printed experiences of intrepid authors. They were works of both artistry and industry—products of the complex, and often contested, relationships between authors and editors, publishers and printers. These books captivated the reading public and played a vital role in creating new geographical truths. In an age of global wonder and of expanding empires, there was

no publisher more renowned for its travel books than the House of John Murray. Drawing on detailed examination of the John Murray Archive of manuscripts, images, and the firm's correspondence with its many authors—a list that included such illustrious explorers and scientists as Charles Darwin and Charles Lyell, and literary giants like Jane Austen, Lord Byron, and Sir Walter Scott—Travels into Print considers how journeys of exploration became published accounts and how travelers sought to demonstrate the faithfulness of their written testimony and to secure their personal credibility. This fascinating study in historical geography and book history takes modern readers on a journey into the nature of exploration, the production of authority in published travel narratives, and the creation of geographical authorship—a journey bound together by the unifying force of a world-leading publisher.

Rediscovering Geography

There are many books about teaching in Geography, but this is the first dealing specifically with Pedagogic Research, its methods and practices. Pedagogy research concerns the processes of learning and the development of learners. It is a learner-centred activity that aims to evaluate and improve the ways that students learn and learn to manage, control and comprehend their own learning processes, first as Geographers in Higher Education but equally as future educated citizens. This book collects together some key research papers from the Journal of Geography in Higher Education. They concern original research and critical perspectives on how Geographers learn, critical evaluations of both new and traditional frameworks and methods used for Pedagogic research in Geography, and some case studies on the promotion of self-authorship, learner autonomy, in key Geography Higher Education contexts such as fieldwork and undergraduate project work. This book is a compilation of articles from various issues of the Journal of Geography in Higher Education.

Geography

This book is concerned with the spatial aspects of the distributive trades. It provides a comprehensive insight into the relationship between consumer demand and retail supply in the context of both recent business trends and increasing planning controls. It unites a wide variety of theories and techniques to the practical problems confronting businessmen and planners and draws together the findings of a vast research literature on the geography of retailing. Extensive comparisons are drawn between conditions in North America and Western Europe. Originally published 1976. 'A valuable and welcome undergraduate textbook.' Environment and Planning 'Recommended unreservedly to managers and planners in the distributive trades and to all those who are concerned with the implications of current trends in the provision of shopping facilities.' Retail Distribution and Management

Research Paper

A penetrating look at the geographical framework of the contemporary world using the geographic perspective and geography's spatial terminology to investigate the globe's great geographic regions. Features complete, balanced and in-depth coverage of human culture, historical, physical and economic geography along with the very latest developments and implications. As in previous editions, this one contains outstanding illustrative materials including over 200 detailed maps.

Marketing Geography

Ever since humans sketched primitive maps in the dirt, the quest to understand our surroundings has been fundamental to our survival. Studying geography revealed that the earth was round, showed our ancestors where to plant crops, and helped them appreciate the diversity of the planet. Today, the world is changing at an unprecedented pace, as a result of rising sea levels, deforestation, species extinction, rapid urbanization, and mass migration. Modern technologies have brought people from across the globe into contact with each other, with enormous political and cultural consequences. As a subject concerned with how people, environments, and places are organized and interconnected, geography provides a critical window into where things happen, why they happen where they do, and how geographical context influences environmental processes and human affairs. These perspectives make the study of geography more relevant than ever, yet it remains little understood. In this engrossing book, Alexander B. Murphy explains why geography is so important to the current moment.

Geographic Perspectives in Migration Research

Geography, Study Guide

As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. Rediscovering Geography presents a broad overview of geography's renewed importance in a changing world. Through discussions and highlighted case studies, this book illustrates geography's impact on international trade, environmental change, population growth, information infrastructure, the condition of cities, the spread of AIDS, and much more. The committee examines some of the more significant tools for data collection, storage, analysis, and display, with examples of major contributions made by geographers. Rediscovering Geography provides a blueprint for the future of the discipline, recommending how to strengthen its intellectual and institutional foundation and meet the demand for geographic expertise among professionals and the public.

Practising Human Geography

Reading this book is your first step to becoming a competent human geography researcher. Whether you are a novice needing practical help for your first piece of research or a professional in search of an accessible guide to best practice, Conducting Research in Human Geography is a unique and indispensable book to have at hand. The book provides a broad overview of theoretical underpinnings in contemporary human geography and links these with the main research methodologies currently being used. It is designed to guide the user through the complete research process, whether it be a one day field study or a large project, from the nurturing of ideas and development of a proposal, to the design of an enquiry, the generation and analysis of data, to the drawing of conclusions and the presentation of findings.

Geography and Development

This book offers a comprehensive, accessible, and practical guide on how to conduct qualitative research in human geography. Enhanced and greatly expanded by nine new chapters, the latest edition shows students how to plan, conduct, interpret, and communicate qualitative research.

Integrated Models in Geography (Routledge Revivals)

- Guides students in the preparation of literature reviews for term projects, theses, and dissertations.
- Most chapters are

conveniently divided into easy-to-follow guidelines, sequential steps, or checklists. Numerous examples throughout the book show students what should and should not be done when writing reviews. • Emphasizes critical analysis of reports of empirical research in academic journals—making it ideal as a supplement for research methods courses. This book makes it possible for students to work independently on a critical literature review as a term project. • Nine model literature reviews at the end of the book provide the stimulus for homework assignments and classroom discussions. • The activities at the end of each chapter keep students moving toward their goal of writing a polished, professional review of academic literature. • Most examples include material from recently published research. Includes nine model literature reviews for discussion and evaluation.

Studies in Geography

Practising Human Geography is critical introduction to disciplinary debates about the practice of human geography, that is informed by an inquiry into how geographers actually do research. In examining those methods and practices that are integral to doing geography, the text presents a theoretically-informed reflection on the construction and interpretation of geographical data - including factual and "fictional" sources; the use of core research methodologies; and the interpretative role of the researcher. Framed by an historical overview how ideas of practising human geography have changed, the following three sections offer an comprehensive and integrated overview of research methodologies. Illustrated throughout, the te

Perception of the Freeze Hazard in Florida

First published in 1967, this book explores the theme of geographical generalization, or model building. It is composed of five of the chapters from the original *Models in Geography*, published in 1967. The first chapter broadly outlines this theme and examines the nature and function of generalized statements, ranging from conceptual models to scale models, in a geographical context. The following chapters deal with mixed-system model building in geography, wherein data, techniques and concepts in both physical and human geography are integrated. The book contains chapters on organisms and ecosystems as geographical models as well as spatial patterns in human geography. This text represents a robustly anti-idiographic statement of modern work in one of the major branches of geography.

Designed with New York State high school students in mind. CliffsTestPrep is the only hands-on workbook that lets you study, review, and answer practice Regents exam questions on the topics you're learning as you go. Concise answer explanations immediately follow each question--so everything you need is right there at your fingertips. After going through the practice questions, you can use the workbook again as a refresher to prepare for the Regents exam by taking a full-length practice test. You'll get comfortable with the structure of the actual exam while also pinpointing areas where you need further review. About the contents: Inside this workbook, you'll find sequential, topic-specific test questions with fully explained answers for each of the following subjects: World History Geography Economics Civics, Citizenship, and Government A full-length practice test at the end of the book is made up of questions culled from multiple past Regents

exams. Use it to identify your weaknesses, and then go back to those sections for more study. It's that easy! The only review-as-you-go workbook for the New York State Regents exam.

Conducting Research in Human Geography

This report provides guidance to the Gulf Ecosystem Monitoring (GEM) program to help ensure that it is based on a science plan that is robust, far-reaching, and scientifically sound. The report commends the Trustee Council for its foresight in setting aside funds to create a trust fund to provide long-term research support; it notes that the GEM program offers an unparalleled opportunity to increase understanding of how large marine ecosystems function and change over time. The report outlines elements of a sound long-term science plan, including conceptual foundation, scope and geographic focus, organizational structure, community involvement, data and information management, and synthesis, modeling, and evaluation.

Gilbert F. White is the preeminent geographer of natural resources, hazards, and the human environment. During fifty years of professional work as civil servant, scientist, and educator, he authored numerous books and papers. This volume is the first collection of White's work, spanning his interests and career from 1934 to 1984. Individual introductions by the editors place each selection in historical perspective and assay its significance. With the companion volume, *Theme from the Work of Gilbert F. White*, White's writings, and the work that he inspired, are now readily accessible to all who share his concern for the stewardship of the earth.

Doing Children's Geographies provides a useful resource for all those embarking on research with young people. Drawing on reflections from original cutting-edge research undertaken across three continents, the book focuses on the challenges researchers face when working with children, youth and their families. The book is divided into three sections. The first section provides alternatives to some of the difficulties researchers face and highlights methodological innovations as geographers uncover new and exciting ways of working. The second part specifically addresses the issues surrounding children and youth's participation providing critiques of current practice and offering alternatives for increasing young

people's involvement in research design. Finally, the book broadens to a consideration of wider areas of concern for those working with children and youth. This section discusses the nature of childhood in relation to research, the place of emotions in research with young people and the process of undertaking applied research. This book was previously published as a special issue of *Children's Geographies*

Doing Children's Geographies

A Century of Ecosystem Science

"I cannot imagine a better guide to the transition between school and undergraduate geography than this short, informative and confidently-argued book. Written without fuss but based on solid learning and clear thinking, it tackles head-on a question many professional academic geographers would rather avoid." - Alisdair Rogers, University of Oxford "A beautiful little book that helps to introduce the core concepts of geography and provides an ideal framework for relating other fields of knowledge and academia." - Stefan Zimmermann, University of Osnabruck

What is Geography? Geography is a fundamental fascination with, and a crucial method for, understanding the way the world works. This text offers readers a short and highly accessible account of the ideas and concepts constituting geography. Drawing out the key themes that define the subject, *What is Geography?* demonstrates how and why these themes - like environment and geopolitics- are of fundamental importance. Including discussion of both the human and the natural realms, the text looks at key themes like environment, space, and place - as well as geography's methods and the history of the discipline. Introductory but not simplified, *What is Geography?* will provide students with the ability to understand the history and context of the subject without any prior knowledge. Designed as a key transitional text for students entering undergraduate courses, this book will be of interest to all readers interested in and intrigued by the "geographical imagination".

Qualitative Approaches in Social and Geographical Research

Originally published in 1969, *Behavioral Problems in Geography* unpacks and identifies elements of behavioral models and theories. The book seeks to examine their specific effects on spatial activity and to operationalize some of the concepts previously used in a subjective and descriptive manner. All papers, are united by a common concern for the building of geographic theory regarding human behavior. Contributions in the volume vary a great deal in their emphasis ranging from philosophy and review, to theorizing and operationalization. Each paper recognizes the importance of examining the behavioural basis of spatial activity. This book will appeal to scholars of geography and psychology alike.
