Knowledge of God

Philosophy for A Level

This book treats the presence of God and the presence of persons. The experience of the presence of God is a well-recognized religious experience in theistic traditions. The experience of the presence of persons, this book argues, is an analogous moral experience. As it is possible for individuals to come into the presence of God – to have this phenomenal experience – so it is possible for them to come into the presence of persons. Kellenberger explores how coming into the presence of persons is structurally analogous with coming into the presence of God. Providing a highly focused analysis of the two seemingly distinct concepts, normally thought to fall under different subfields of philosophy, the chapters carefully draw parallels between them. Kellenberger then goes on show how, analogous to “the death of God,” a loss of the consciousness of the reality of God and his presence, is a “death of persons”, felt as a loss of the sense of the inherent worth of persons and their presence. This volume finishes with an examination of the concrete moral and religio-ethical implications of coming into the presence of persons, and in particular the implications of coming into the presence of all persons.

The Trinity and Theodicy

Faith and the Life of Reason

Plantinga examines the nature of epistemic warrant; whatever it is that when added to true belief yields knowledge. This volume surveys current contributions to the debate and paves the way for his own positive proposal in Warrant and Proper Function.

Reason, Metaphysics, and Mind

Although mammals and birds are widely regarded as the smartest creatures on earth, it has lately become clear that a very distant branch of the tree of life has also sprouted higher intelligence: the cephalopods, consisting of the squid, the cuttlefish, and above all the octopus. In captivity, octopuses have been known to identify individual human keepers, raid neighboring tanks for food, turn off lightbulbs by spouting jets of water, plug drains, and make daring escapes. How is it that a creature with such gifts evolved through an evolutionary lineage so radically distant from our own? What does it mean that evolution built minds not once but at least twice? The octopus is the closest we will come to meeting an intelligent alien. What can we learn from the encounter? In *Other Minds*, Peter Godfrey-Smith, a distinguished philosopher of science and a skilled scuba diver, tells a bold new story of how subjective experience crept into being—how nature became aware of itself. As Godfrey-Smith stresses, it is a story that largely occurs in the ocean, where animals first appeared. Tracking the mind's fitful development, Godfrey-Smith shows how unruly clumps of seaborne cells began living together and became capable of sensing, acting, and signaling. As these primitive organisms became more entangled with others, they grew more complicated. The first nervous systems evolved, probably in ancient relatives of jellyfish; later on, the cephalopods, which began as inconspicuous mollusks, abandoned their shells and rose above the ocean floor, searching for prey and acquiring the greater intelligence needed to do so. Taking an independent route, mammals and birds later began their own evolutionary journeys. But what kind of intelligence do cephalopods possess? Drawing on the latest scientific research and his own scuba-diving adventures, Godfrey-Smith probes the many mysteries that surround the lineage. How did the octopus, a solitary creature with little social life, become so smart? What is it like to have eight tentacles that are so packed with neurons that they virtually "think for themselves"? What happens when some octopuses abandon their hermit-like ways and congregate, as they do in a unique location off the coast of Australia? By tracing the question of inner life back to its roots and comparing human beings with our most remarkable animal relatives, Godfrey-Smith casts crucial new light on the octopus mind—and on our own.

Warrant

Michael Caputo, through years of exhaustive research, has discovered letters, writings, and quotes that reveal what the greatest artists, musicians, philosophers, scientists, and writers thought about the God of heaven. Through the pages of this timeless work, you will engage the thoughts of history's most celebrated people: Mozart, Galileo, Descartes, Shakespeare, Einstein, Michelangelo, and many more. Did great intellect and creativity lead brilliant men and women of the past to agnosticism and atheism, or did it lead them to believe in and submit to a Creator God? The answer to that question lies in the pages of this intriguing book. As you read and experience how the greatest minds of history viewed God, you will find an overwhelming consensus that the God of the universe does indeed exist and that He has impacted and shaped those who have influenced our world. Michael Caputo, through years of exhaustive research, has discovered letters, writings, and quotes that reveal what the greatest artists, musicians, philosophers, scientists, and writers thought about the God of heaven. Through the pages of this timeless

work, you will engage the thoughts of history's most celebrated people: Mozart, Galileo, Descartes, Shakespeare, Einstein, Michelangelo, and many more. Open the pages of this book and discover what those who have shaped history thought about the God of eternity.

Minds, Brains, Souls and Gods

This is a reissue of a book which is an exploration and defence of the notion of modality 'de re', the idea that objects have both essential and accidental properties. It is one of the first full-length studies of the modalities to emerge from the debate to which Saul Kripke, David Lewis, Ruth Marcus and others have contributed. The argument is developed by means of the notion of possible worlds, and ranges over key problems including the nature of essence, trans-world identity, negative existential propositions, and the existence of unactual objects in other possible worlds. In the final chapters Professor Plantinga applies his logical theories to the clarification of two problems in the philosophy of religion - the Problem of Evil and the Ontological Argument.

Developing Rural India

We all take it for granted that we are typically in a position to know about the thoughts and feelings of other people. But we might naturally wonder how we acquire this kind of knowledge. *Knowing Other Minds* brings together ten original chapters, written by internationally renowned researchers, on questions that arise from our everyday social interaction with others. Can we have direct perceptual knowledge of another person's thoughts? How do we acquire general conceptions of mental states? What lessons can be drawn from experimental work in developmental psychology? Are there fundamental differences between the ways in which we acquire knowledge of our own minds and the ways in which we acquire knowledge of someone else's mind? What sort of cognitive processing underlies our everyday social understanding? How should we best think of the relationship between our complex social life and moral value? The chapters in this volume convey a variety of different perspectives and make a number of novel contributions to the existing literature on these questions, thereby opening up new avenues of inquiry. Furthermore, they illustrate how questions in philosophy and questions from empirical cognitive science overlap and mutually inform one another.

Return to Reason

One of the most outstanding books ever written on philosophy. It touches the questions of God and the human soul logically and seeks truth in science. This literary piece of art is written with a distinct and carefully chosen voice of narrator which leads the reader through the meditation. Magnificent and incredible!

God Seen Through the Eyes of the Greatest Minds

Is belief in God epistemically justified? That's the question at the heart of this volume in the Great Debates in Philosophy series, with Alvin Plantinga and Michael

Tooley each addressing this fundamental question with distinctive arguments from opposing perspectives. The first half of the book contains each philosopher's explanation of his particular view; the second half allows them to directly respond to each other's arguments, in a lively and engaging conversation Offers the reader a one of a kind, interactive discussion Forms part of the acclaimed Great Debates in Philosophy series

Can We See the Invisible Mind of God?

The Analytic Theist

This collection of essays and excerpts gives a comprehensive overview of Alvin Plantinga's seminal work as a Christian philosopher of religion.

God and Other Minds

For anyone who has wondered, "What have the greatest minds in human history thought of God?" This charmingly-illustrated compendium of quotes will inspire, comfort, and delight anyone who has contemplated the higher power. Throughout history, humans have been fascinated by the idea a divine, omnipotent being. This curiosity has captivated all of us, including civilization's most brilliant thinkers. God is a compilation of 48 carefully-chosen quotes from history's most interesting minds-including Homer, Galileo, Einstein, Pope Francis, and Maya Angelou-specifically on what they had to say when they pondered the higher power. The quotes are paired with delightful illustrations from famed New Yorker cartoonist R.O. Blechman, grounding this varied group of perspectives in a common visual language that is sure to amuse and delight readers.

Loving God with All Your Mind Growth and Study Guide

This is the eBook version of the printed book. This Element is an excerpt from Invisible Forces and Powerful Beliefs: Gravity, Gods, and Minds (9780137075454) by the Chicago Social Brain Network. Available in print and digital formats. How do people understand others' minds...God's, yours, anyone's? Shortly after taking off from LaGuardia, the engines of US Airways Flight 1549 failed. The pilots glided onto the Hudson River, where all the passengers were rescued. Explained one passenger, "God was certainly looking out for us." To psychologists, such statements reveal one of the social brain's most impressive capacities--the ability to "see" what other minds see.

Where the Conflict Really Lies

Why does God permit the great suffering and evil that we see in our world? This basic question of human existence receives a fresh answer in this book as the mystery of evil is explored in the context of the mystery of the Trinity. God's permission of evil and the way in which suffering can lead human persons into the life of the Trinity are discussed in dialogue with the great Swiss theologian Hans Urs von Balthasar. In the light of Balthasar's model of the Trinity as divine self-

Access Free God And Other Minds A Study Of The Rational Justification Of Belief In God Cornell Paperbacks

giving love, we gain a profound grasp of the nature of suffering in human life by placing our suffering in the context of the divine life of the Triune God.

God, Freedom, and Evil

Completely revised and updated, this new edition of *Terror in the Mind of God* incorporates the events of September 11, 2001 into Mark Juergensmeyer's landmark study of religious terrorism. Juergensmeyer explores the 1993 World Trade Center explosion, Hamas suicide bombings, the Tokyo subway nerve gas attack, and the killing of abortion clinic doctors in the United States. His personal interviews with 1993 World Trade Center bomber Mahmud Abouhalima, Christian Right activist Mike Bray, Hamas leaders Sheik Yassin and Abdul Azis Rantisi, and Sikh political leader Simranjit Singh Mann, among others, take us into the mindset of those who perpetrate and support violence in the name of religion.

Other Minds

The Mind Club

More than 190,000 copies of Elizabeth George's Growth and Study Guides have been sold! Her newest one, based on her encouraging book *Loving God with All Your Mind* (more than 200,000 copies sold), provides insights and thoughtful questions to help women— focus on God and His principles for life turn daily struggles over to God apply God's truths to everyday life recognize and live God's purpose for their lives find peace in all circumstances Drawing on biblical wisdom, Elizabeth helps women sort through their emotions and find inner strength and peace by focusing on what is true and godly. For group or personal study.

The God Delusion. 10th Anniversary Edition

At the height of what was known as the New Thought Movement, the great thinker, writer and leader Ernest Holmes published his *The Science of Mind*, which details the tenets of the spiritual movement which he founded—Religious Science. Holmes was a popular speaker in his time, filling auditoriums with listeners eager to learn his methods for forging a new relationship with the Christian God. He covers the basics in *The Science of Mind*, along with applicable habits like meditation and prayer, in order to put readers in touch with their God and on a healing path.

Minds and Gods

!--StartFragment-- In her most popular bestseller ever, the beloved author and minister Joyce Meyer shows readers how to change their lives by changing their minds. Joyce Meyer teaches how to deal with thousands of thoughts that people think every day and how to focus the mind the way God thinks. And she shares the

trials, tragedies, and ultimate victories from her own marriage, family, and ministry that led her to wondrous, life-transforming truth--and reveals her thoughts and feelings every step of the way. Download the free Joyce Meyer author app.

Other Minds

In May 2010, philosophers, family and friends gathered at the University of Notre Dame to celebrate the career and retirement of Alvin Plantinga, widely recognized as one of the world's leading figures in metaphysics, epistemology, and the philosophy of religion. Plantinga has earned particular respect within the community of Christian philosophers for the pivotal role that he played in the recent renewal and development of philosophy of religion and philosophical theology. Each of the essays in this volume engages with some particular aspect of Plantinga's views on metaphysics, epistemology, or philosophy of religion. Contributors include Michael Bergman, Ernest Sosa, Trenton Merricks, Richard Otte, Peter VanInwagen, Thomas P. Flint, Eleonore Stump, Dean Zimmerman and Nicholas Wolterstorff. The volume also includes responses to each essay by Bas van Fraassen, Stephen Wykstra, David VanderLaan, Robin Collins, Raymond VanArragon, E. J. Coffman, Thomas Crisp, and Donald Smith.

Other Minds

How do we know whether there are other minds besides our own? The problem of other minds raises many questions which are at the root of all philosophical investigations - how it is we know, what is the mind and can we be certain about any of our beliefs? In this compelling analysis of 'other minds' Anita Avramides traces the question from the Ancient Sceptics through to Descartes, Malebranche, Locke, Berkeley, Reid and Wittgenstein. The second part of the book explores the views of influential contemporary philosophers such as Strawson, Davidson, Nagel and Searle. Other Minds provides a clear insightful introduction to one of the most important problems in philosophy. It will prove invaluable to all students of philosophy.

Terror in the Mind of God

This book brings together ideas and materials which we have discussed together over the years as friends and colleagues. We draw on four papers published by us both as co-authors and on several more papers published by King-Farlow alone. We wish to thank the editors and publishers of the following journals for permission to make use of matter or points which have appeared in their pages in the years indicated: The Philosophical Quarterly (1957, 1962, 1971); The Thomist (1958, 1971, 1972); The International Philosophical Quarterly (1962); Theoria (1963); The Southern Journal of Philosophy (1963); Sophia (1965, 1967, 1969, 1971); Philosophical Studies of Eire (1968, 1970, 1971); Philosophy and Phenomenological Research (1968); Analysis (1970); Religious Studies (Cambridge University Press, 1971; we acknowledge a debt to H. D. Lewis, Editor, on page 20). This book is not, however, a collection of reprinted articles. It is a continuous work which deals with a vital cluster of problems in the philosophy of religion. In this work we attempt to utilize both our earlier thoughts, often considerably revised, and our very recent ones in

order to argue for the good sense and rationality of making certain strong forms of commitment to some basic elements of primary wisdom in the Judaeo Christian tradition. While pursuing the investigations which have led to the writing of this book we have found ourselves becoming indebted to many individuals and institutions.

Knowledge and Christian Belief

Two Dozen (or so) Arguments for God

Battlefield of the Mind

Charting a "middle way" between the extremes represented by Alvin Plantinga and Richard Swinburne, Garth Hallett explores the thesis that if belief in other minds is rational and true (as it surely is), so too is belief in God. He makes a strong case that when this parity claim is appropriately restricted to a single, sound other-minds belief, belief in God and belief in other minds do prove epistemically comparable. This result, and the distinctive path that leads to it, will interest students and scholars in philosophy of religion and theology.

Emerson and Other Minds

Philosophy for A Level is an accessible textbook for the new 2017 AQA Philosophy syllabus. Structured closely around the AQA specification this textbook covers the two units, Metaphysics of God and Metaphysics of Mind, in an engaging and student-friendly way. With chapters on 'How to do philosophy', exam preparation providing students with the philosophical skills they need to succeed, and an extensive glossary to support understanding, this book is ideal for students studying philosophy. Each chapter includes: argument maps that help to develop students' analytical and critical skills comprehension questions to test understanding discussion questions to generate evaluative argument explanation of and commentary on the AQA set texts 'Thinking harder' sections cross-references to help students make connections bullet-point summaries of each topic. The companion website hosts a wealth of further resources, including PowerPoint slides, flashcards, further reading, weblinks and handouts, all structured to accompany the textbook. It can be found at www.routledge.com/cw/alevelphilosophy.

God and Other Minds

"Compelling, and so beautifully written... 'The Mind Club' deftly brings the most up-to-date research about other minds to readers of all backgrounds. It may cause you to think differently about crime and punishment, about business transactions and health care, and even about the upcoming elections. Things might just start looking up."—The Wall Street Journal From dogs to gods, the science of understanding mysterious minds—including your own. Nothing seems more real than the minds of other people. When you consider what your boss is thinking or

whether your spouse is happy, you are admitting them into the "mind club." It's easy to assume other humans can think and feel, but what about a cow, a computer, a corporation? What kinds of mind do they have? Daniel M. Wegner and Kurt Gray are award-winning psychologists who have discovered that minds—while incredibly important—are a matter of perception. Their research opens a trove of new findings, with insights into human behavior that are fascinating, frightening and funny. The Mind Club explains why we love some animals and eat others, why people debate the existence of God so intensely, how good people can be so cruel, and why robots make such poor lovers. By investigating the mind perception of extraordinary targets—animals, machines, comatose people, god—Wegner and Gray explain what it means to have a mind, and why it matters so much. Fusing cutting-edge research and personal anecdotes, The Mind Club explores the moral dimensions of mind perception with wit and compassion, revealing the surprisingly simple basis for what compels us to love and hate, to harm and to protect. From the Hardcover edition.

God Soul Mind Brain

For fans of Deepak Chopra, Rudy Tanzi, and Andrew Newberg. A renowned behavioral neurologist provides insights to some of the most curious spiritual questions we all face. Is there a God? It's a question billions of people have asked since the dawn of time. You would think by now we'd have a satisfactory, universal answer. No such luck...Or maybe we do and we just need to look in the right place. For Dr. Jay Lombard that place is the brain, and more importantly the mind, that center of awareness and consciousness that creates reality. In *The Mind of God*, Dr. Lombard employs case studies from his own behavioral neurology practice to explore the spiritual conundrums that we all ask ourselves: What is the nature of God? Does my life have purpose? What's the meaning of our existence? Are we free? What happens to us when we die? For Lombard, these metaphysical questions are a jumping-off point for exploring the brain in search of the seat of the soul. It is neuroscience, the author contends, and how we and our brains interpret what's going on around us that can lead us to a deeper and more fulfilling faith. Mixing his personal experiences in the medical field (including compelling cases such as the male patient who really thought he was pregnant and a woman who literally scared herself to death) along with his own visionary insight into spiritual experience, Lombard has much to tell us about the nature and power of belief—and what we can do to focus our beliefs in a positive direction. If you want to find more meaning in your life or are searching for a deeper understanding of why we believe what we believe, then this book can lead to an exciting transformation in the way you see and understand the world around you. With cutting-edge research and provocative case studies, renowned behavioral neurologist provides insights to some of the most curious spiritual questions of mortality.

Meditations of First Philosophy

Science and (not versus) religion: a neuroscientific account of how the brain's social machinery creates consciousness, soul, spiritualism, and God.

God

In *Emerson and Other Minds*, Michael J. Colacurcio traces the long arc of Ralph Waldo Emerson's writings. While Emerson's seldom argues academically in his essays, he intends the essays to be primary acts of philosophy. The essays are also highly wrought literary performances, and so they need to be closely read in the New Critical manner. Colacurcio proposes that Emerson is one of modernity's central writers on the question of privacy: the unsettling epistemological fact that even though people have the ability to share through language the experiences that shape their version of the world, no one else can fully experience another's process of creating and evaluating the world. Emerson may imagine a transparent eyeball, but never a universal retina. This ineluctable privacy underwrites the famous moral doctrine of self-reliance, but it also helps to explain the painful problems of love and friendship. Colacurcio's close reading results in a two-volume compilation that reminds us of the importance of encountering and remembering Emerson for more than his famous sentences. Conversing with himself and other powerful minds on fundamental questions of human knowledge and behavior, Emerson produced brilliant essays--both philosophical and literary in the fullest sense--that are certainly worth reading closely and with new eyes. --Eric Sundquist, Andrew W. Mellon Professor Emeritus of the Humanities, Johns Hopkins University

The Science of Mind

God and Other Minds

In this long-awaited book, pre-eminent analytical philosopher Alvin Plantinga argues that the conflict between science and theistic religion is actually superficial, and that at a deeper level they are in concord.

The Mind of God

In this hypothetical correspondence, Malcolm Jeeves urges Christian students to enter the brave new world of neuroscience ready to have their faith examined and their experiences of God put to the test. When we do this, he argues, being mindful of oversimplifications as we go, the integration of Christianity and psychology becomes possible.

God and Other Minds

Around the world and throughout history, in cultures as diverse as ancient Mesopotamia and modern America, human beings have been compelled by belief in gods and developed complex religions around them. But why? What makes belief in supernatural beings so widespread? And why are the gods of so many different people so similar in nature? This provocative book explains the origins and persistence of religious ideas by looking through the lens of science at the common structures and functions of human thought. The first general introduction to the "cognitive science of religion," *Minds and Gods* presents the major themes, theories, and thinkers involved in this revolutionary new approach to human

religiosity. Arguing that we cannot understand what we think until we first understand how we think, the book sets out to study the evolutionary forces that modeled the modern human mind and continue to shape our ideas and actions today. Todd Tremlin details many of the adapted features of the brain -- illustrating their operation with examples of everyday human behavior -- and shows how mental endowments inherited from our ancestral past lead many people to naturally entertain religious ideas. In short, belief in gods and the social formation of religion have their genesis in biology, in powerful cognitive processes that all humans share. In the course of illuminating the nature of religion, this book also sheds light on human nature: why we think we do the things we do and how the reasons for these things are so often hidden from view. This discussion ranges broadly across recent scientific findings in areas such as paleoanthropology, primate studies, evolutionary psychology, early brain development, and cultural transmission. While these subjects are complex, the story is told here in a conversational style that is engaging, jargon free, and accessible to all readers. With *Minds and Gods*, Tremlin offers a roadmap to a fascinating and growing field of study, one that is sure to generate interest and debate and provide readers with a better understanding of themselves and their beliefs.

The Presence of God and the Presence of Persons

The *God Delusion* caused a sensation when it was published in 2006. Within weeks it became the most hotly debated topic, with Dawkins himself branded as either saint or sinner for presenting his hard-hitting, impassioned rebuttal of religion of all types. His argument could hardly be more topical. While Europe is becoming increasingly secularized, the rise of religious fundamentalism, whether in the Middle East or Middle America, is dramatically and dangerously dividing opinion around the world. In America, and elsewhere, a vigorous dispute between 'intelligent design' and Darwinism is seriously undermining and restricting the teaching of science. In many countries religious dogma from medieval times still serves to abuse basic human rights such as women's and gay rights. And all from a belief in a God whose existence lacks evidence of any kind. Dawkins attacks God in all his forms. He eviscerates the major arguments for religion and demonstrates the supreme improbability of a supreme being. He shows how religion fuels war, foments bigotry and abuses children. *The God Delusion* is a brilliantly argued, fascinating polemic that will be required reading for anyone interested in this most emotional and important subject.

The Nature of Necessity

Clark provides a penetrating critique of the Enlightenment assumption of evidentialism--that belief in God requires the support of evidence or arguments to be rational. His assertion is that this demand for evidence is itself both irrelevant and irrational. His work bridges the gap between technical philosopher and educated layperson.

Knowing Other Minds

A Middle Way to God

Thirty years ago, Alvin Plantinga gave a lecture called "Two Dozen (or so) Theistic Arguments," which served as an underground inspiration for two generations of scholars and students. In it, he proposed a number of novel and creative arguments for the existence of God which have yet to receive the attention they deserve. In *Two Dozen (or so) Arguments for God*, each of Plantinga's original suggestions, many of which he only briefly sketched, is developed in detail by a wide variety of accomplished scholars. The authors look to metaphysics, epistemology, semantics, ethics, aesthetics, and beyond, finding evidence for God in almost every dimension of reality. Those arguments new to natural theology are more fully developed, and well-known arguments are given new life. Not only does this collection present ground-breaking research, but it lays the foundations for research projects for years to come.
