Fly toward pilot certification with these real-world scenario exercises Although PC-based flight simulations have been available for 30 years, many pilots, instructors, and flight schools don't understand how best to use these tools in real-world flight training and pilot proficiency programs. This invaluable reference bridges the gap between simulation tools and real-world situations by presenting hands-on, scenario-based exercises and training tips for the private pilot certificate and instrument rating. As the first of its kind based on FAA-Industry Training Standards (FITS), this book steers its focus on a scenario-based curriculum that emphasizes real-world situations. Experienced pilot and author Bruce Williams ultimately aims to engage the pilot, reinforce the "realistic" selling point of PC-based flight simulations, while also complementing the FAA-approved FITS syllabi. Serves as essential reading for pilots who want to make effective use of simulation in their training while expanding their skill level and enjoyment of flying Covers private pilot real-world scenarios and instrument rating scenarios Includes a guide to recommended websites and other resources Features helpful charts as well as a glossary You'll take off towards pilot certification with this invaluable book by your

side.

This overview of interactive videodisc technology is designed to assist educators in finding the appropriate equipment and software for any specific application. The

handbook may also serve as a starting point for many educators who know nothing of the technology and assist them in deciding whether this technology is worth pursuing as an educational tool in specific situations. Although not comprehensive, the listings reflect a good portion of the videodisc-related products available today and the prices provide a good indication of the general price range of specific items. The handbook contains 10 chapters: (1) Introduction to Videodiscs; (2) Overview of Laser Disc Systems; (3) Selecting a Laser Videodisc Player; (4) Video Playback Units; (5) Videodisc Interface Units; (6) Disc Player Peripherals; (7) Videodisc System Packages; (8) Educational Videodisc Software; (9) Interactive Videodisc Authoring Languages; and (10) Videodisc Care and Maintenance. Appendices include directories of laser disc players; television monitors and projects; laser disc interfaces; laser disc peripherals; laser disc system packages; videodisc software (listed by subject area); videodisc mastering options; interactive authoring languages; service information; and videodisc resources, which includes a manufacturer's index.
