Equipment Maintenance Log Book

Designed for the required course on hydraulics found in diesel technology and heavy equipment programs, **MOBILE EQUIPMENT HYDRAULICS: A SYSTEMS AND TROUBLESHOOTING APPROACH**, takes a practical approach to the understanding of fluid power / hydraulic systems. Instead of concentrating on the design issues of fluid power systems this book approaches hydraulics more like a technician would to approach a system that requires maintenance or troubleshooting. Nearly all aspiring diesel technicians receive training in this subject, which is one of seven areas of study recognized by ASE Education Foundation in diesel technology. Coverage includes a study of terminology, industrial standards, symbols and basic circuitry design as related to fluid power. Examples are drawn from actual equipment that is relevant to the program of study, whether it be heavy truck, earth-moving, or agricultural equipment. This analysis identifies tasks that a qualified heavy duty equipment mechanic is called upon to perform in Canada. The equipment is typically found in the fields of construction, transportation, natural resources, and materials handling. The analysis identifies tasks and sub-tasks performed by such a mechanic, arranged in blocks of distinct operations relevant to that occupation. These blocks include workplace safety, work practices and procedures, and tasks related to internal combustion engines, power trains, electrical and electronic systems, hydraulic and hydrostatic drive systems, pneumatics, steering systems, suspension and braking systems, frames, chassis, wheels and tracks, attachments, and ground-engaging and working tools. For each task, the document outlines the element of skill and knowledge needed to perform the task adequately, identifies any shifts or changes in technology that affect the task, lists tools and equipment required for the task, and provides an indication of whether the task has been validated by each province and territory. The

appendix includes a list of tools and equipment used in the occupation, and a tabulation of the percentage of time a worker spends performing each block and task in a given year (by province/territory and for Canada as a whole).
