cherished stories of all time, *To Kill a Mockingbird* has been translated into more than forty languages, sold more than forty million copies worldwide, served as the basis for an enormously popular motion picture, and was voted one of the best novels of the twentieth century by librarians across the country. A gripping, heart-wrenching, and wholly remarkable tale of coming-of-age in a South poisoned by virulent prejudice, it views a world of great beauty and savage inequities through the eyes of a young girl, as her father—a crusading local lawyer—risks everything to defend a black man unjustly accused of a terrible crime.

Introduction to part 2

To Kill a Mockingbird

This book discusses the common principles of morality and ethics derived from divinely endowed intuitive reason through the creation of al-fitr' a (nature) and human intellect (al-'aql). Biomedical topics are presented and ethical issues related to topics such as genetic testing, assisted reproduction and organ transplantation are discussed. Whereas these natural sources are God's special gifts to human beings, God's revelation as given to the prophets is the supernatural source of

divine guidance through which human communities have been guided at all times through history. The second part of the book concentrates on the objectives of Islamic religious practice – the maqa' sid – which include: Preservation of Faith, Preservation of Life, Preservation of Mind (intellect and reason), Preservation of Progeny (al-nasl) and Preservation of Property. Lastly, the third part of the book discusses selected topical issues, including abortion, assisted reproduction devices, genetics, organ transplantation, brain death and end-of-life aspects. For each topic, the current medical evidence is followed by a detailed discussion of the ethical issues involved.

Meet Asher - a teenager who self-harms to manage their feelings when it all feels like too much. The latest in the best-selling Can I Tell You About series describes what self-harm is, along with the wide range of behaviours that qualify, why teens do it, and how to get help if you feel the need to self-harm. Reflecting on the different aspects of self-harming behaviour, including treatment of injuries and scars, this concise introduction dispels common myths and offers helpful resources to break the cycle of self-harm. By initiating the conversation around self-harm, this guide will offer alternative avenues for children and young adults to pursue when dealing with big feelings, such as professional counselling, distraction, and friends and family. This easy-to-read guide is suitable for readers 7+, along with

Ethics, Conflict and Medical Treatment for Children E-Book

A visionary investigation that will change the way we think about health care: how and why it is failing, why expanding coverage will actually make things worse, and how our health care can be transformed into a transparent, affordable, successful system. In 2007, David Goldhill's father died from infections acquired in a hospital, one of more than two hundred thousand avoidable deaths per year caused by medical error. The bill was enormous—and Medicare paid it. These circumstances left Goldhill angry and determined to understand how world-class technology and personnel could coexist with such carelessness—and how a business that failed so miserably could be paid in full. *Catastrophic Care* is the eye-opening result. Blending personal anecdotes and extensive research, Goldhill presents us with cogent, biting analysis that challenges the basic preconceptions that have shaped our thinking for decades. Contrasting the Island of health care with the Mainland of our economy, he demonstrates that high costs, excess medicine, terrible service, and medical error are the inevitable consequences of our insurance-based system. He explains why policy efforts to fix these problems have invariably produced perverse results, and how the new Affordable Care Act is more likely to deepen than to solve these issues. Goldhill steps outside the incremental and wonkish

debates to question the conventional wisdom blinding us to more fundamental issues. He proposes a comprehensive new way, where the customer (the patient) is first—a system focused on health and maintaining it, a system strong and vibrant enough for our future. If you think health care is interesting only to institutes and politicians, think again: Catastrophic Care is surprising, engaging, and brimming with insights born of questions nobody has thought to ask. Above all it is a book of new ideas that can transform the way we understand a subject we often take for granted.

With a world steeped in materialism, environmental destruction, and injustice, what can one individual possibly do to change it? While the present obstacles we face may seem overwhelming, author and humane educator Zoe Weil shows us that change doesn't have to start with an army. It starts with you. Through her straightforward approaches to living a MOGO, or "most good," life, she reveals that the true path to inner peace doesn't require a retreat from the world. Rather, she gives the reader powerful and practicable tools to face these global issues, and improve both our planet and our personal lives. Weil explores direct ways to become involved with the community, make better choices as consumers, and develop positive messages to live by, showing readers that their simple decisions really can change the world. Inspiring and remarkably inclusive of the

interconnected challenges we face today, Most Good, Least Harm is the next step beyond "green" -- a radical new way to empower the individual and motivate positive change.

“An extraordinary book; I've read no other like it. Thank goodness Marc Hamer stopped killing moles and sat down to write.” —Sy Montgomery, author of *The Soul of an Octopus* At once a highly original memoir and an ode to the outdoors, this unexpected—and delightfully strange—book reveals, at its core, a rare vision of the natural world. Kneeling in a muddy field, clutching something soft and blue-black, Marc Hamer vows he will stop trapping moles—forever. In this earnest, understated, and sublime work of nonfiction literature, the molecatcher shares what led him to this strange career: from sleeping among hedges as a homeless teen, to toiling on the railway, to weeding windswept gardens in Wales. Hamer infuses his wanderings with radiant poetry and stark, simple observations on nature’s oft-ignored details. He also reveals how to catch a mole—a craft long kept secret by its masters—and burrows into the unusual lives of his muses. Moles, we learn, are colorblind. Their blood holds unusual amounts of carbon dioxide. Their vast tunnel networks are intricate and deceptive. And, like Hamer, they work alone.

'A passionate, provocative book. It isn't just a self-help book. It is a manifesto for a better society' Sunday Times 'One of the most rigorous articulations of the new mood of acceptancea persuasive demolition of many of our cultural stories about how we ought to live' Oliver Burkeman, Guardian Paul Dolan, the bestselling author of Happiness by Design, shows us how to escape the myth of perfection and find our own route to happiness. Be ambitious; find everlasting love; look after your health There are countless stories about how we ought to live our lives. These narratives can make our lives easier, and they might sometimes make us happier too. But they can also trap us and those around us. In Happy Ever After, bestselling happiness expert Professor Paul Dolan draws on a variety of studies ranging over wellbeing, inequality and discrimination to bust the common myths about our sources of happiness. He shows that there can be many unexpected paths to lasting fulfilment. Some of these might involve not going into higher education, choosing not to marry, rewarding acts rooted in self-interest and caring a little less about living forever. By freeing ourselves from the myth of the perfect life, we might each find a life worth living.

Better Never to Have Been argues for a number of related, highly provocative, views: (1) Coming into existence is always a serious harm. (2) It is always wrong to have children. (3) It is wrong not to abort fetuses at the earlier stages of gestation. (4) It would be better if, as a result of there being no new people, humanity became extinct. These views may sound unbelievable - but anyone who reads Benatar will be obliged to take them seriously.

How We Do Harm exposes the underbelly of healthcare today—the overtreatment of the rich, the under treatment of the poor, the financial conflicts of interest that determine the care that physicians' provide, insurance companies that don't demand the best (or even the least expensive) care, and pharmaceutical companies concerned with selling drugs, regardless of whether they improve health or do harm. Dr. Otis Brawley is the chief medical and scientific officer of The American Cancer Society, an oncologist with a dazzling clinical, research, and policy career. How We Do Harm pulls back the curtain on how medicine is really practiced in America. Brawley tells of doctors who select treatment based on payment they will receive, rather than on demonstrated scientific results; hospitals and pharmaceutical companies that seek out patients to treat even if they are not actually ill (but as long as their insurance will pay); a public primed to swallow the latest pill, no matter the cost; and rising healthcare costs for unnecessary—and

often unproven—treatments that we all pay for. Brawley calls for rational healthcare, healthcare drawn from results-based, scientifically justifiable treatments, and not just the peddling of hot new drugs. Brawley's personal history - from a childhood in the gang-ridden streets of black Detroit, to the green hallways of Grady Memorial Hospital, the largest public hospital in the U.S., to the boardrooms of The American Cancer Society—results in a passionate view of medicine and the politics of illness in America - and a deep understanding of healthcare today. *How We Do Harm* is his well-reasoned manifesto for change.

Black Fatigue

How do otherwise considerate human beings do cruel things and still live in peace with themselves? Drawing on his agentic theory, Dr. Bandura provides a definitive exposition of the psychosocial mechanism by which people selectively disengage their moral self-sanctions from their harmful conduct. They do so by sanctifying their harmful behavior as serving worthy causes; they absolve themselves of blame for the harm they cause by displacement and diffusion of responsibility; they minimize or deny the harmful effects of their actions; and they dehumanize those they maltreat and blame them for bringing the suffering on themselves. Dr. Bandura's theory of moral disengagement is uniquely broad in scope. Theories of morality focus almost exclusively at the individual level. He insightfully extends the disengagement of morality to the social-system level through which wide-spread

inhumanities are perpetrated. In so doing, he offers enlightening new perspectives on some of the most provocative issues of our time, addressing: Moral disengagement in all aspects of the death penalty—from public policy debates, to jury decisions, to the processes of execution The social and moral justifications of major industries—including gun manufacturers, the entertainment industry, tobacco companies, and the world of "too big to fail" finance Moral disengagement in terrorism, and how terrorists rationalize the use of violence as a means of social change Climate change denial, and the strenuous efforts by some to dispute the overwhelming scientific consensus affirming the impact of human behavior on the environment "Al Bandura is the most cited individual in the history of psychology for the depth, breadth and originality of his ideas and writings. Now with his groundbreaking new contribution, Moral Disengagement, his reach extends not only to teachers and students but also to the general public --making them aware of everyday evils in many spheres of daily life that must be counteracted by mindful moral engagement." ----Phil Zimbardo, Ph.D. Author, The Lucifer Effect; President, The Heroic Imagination Project "The authoritative statement by the world's most-cited living psychologist, laying out his influential theory. Plunge into these fascinating historical and modern case studies of moral disengagement—morality tales for all time, illuminated by the psychology of how people do harm to themselves and others."-- Susan T. Christopher Hitchens, described in the London Observer as “one of the most prolific, as well as brilliant, journalists of our time” takes on his biggest subject yet—the increasingly dangerous role of religion in the world. In the tradition of Bertrand Russell’s *Why I Am Not a Christian* and Sam Harris’s recent bestseller, *The End Of Faith*, Christopher Hitchens makes the ultimate case against religion. With a close and erudite reading of the major religious texts, he documents the ways in which religion is a man-made wish, a cause of dangerous sexual repression, and a distortion of our origins in the cosmos. With eloquent clarity, Hitchens frames the argument for a more secular life based on science and reason, in which hell is replaced by the Hubble Telescope’s awesome view of the universe, and Moses and the burning bush give way to the beauty and symmetry of the double helix. Nine Pints

From a nationally recognized expert, an exposé of the worst excesses of our zeal for medical testing. Going against the conventional wisdom reinforced by the medical establishment and Big Pharma that more screening is the best preventative medicine, Dr. Gilbert Welch builds a compelling counterargument that what we need are fewer, not more, diagnoses. Documenting the excesses of American medical practice that labels far too many of us as sick, Welch examines the social, ethical, and economic ramifications of a health-care system that unnecessarily diagnoses and treats patients, most of whom will not benefit from treatment, might be harmed by it, and would arguably be better off without screening. Drawing on twenty-five years of medical practice and research on the effects of medical testing, Welch explains in a straightforward, jargon-free style how the cutoffs for treating a person with "abnormal" test results have been drastically lowered just when technological advances have allowed us to see more

Download Ebook How We Do Harm A Doctor Breaks Ranks About Being Sick In America Otis Webb Brawley

and more "abnormalities," many of which will pose fewer health complications than the procedures that ostensibly cure them. Citing studies that show that 10 percent of two thousand healthy people were found to have had silent strokes, and that well over half of men over age sixty have traces of prostate cancer but no impairment, Welch reveals overdiagnosis to be rampant for numerous conditions and diseases, including diabetes, high cholesterol, osteoporosis, gallstones, abdominal aortic aneurysms, blood clots, as well as skin, prostate, breast, and lung cancers. With genetic and prenatal screening now common, patients are being diagnosed not with disease but with "pre-disease" or for being at "high risk" of developing disease. Revealing the economic and medical forces that contribute to overdiagnosis, Welch makes a reasoned call for change that would save us from countless unneeded surgeries, excessive worry, and exorbitant costs, all while maintaining a balanced view of both the potential benefits and harms of diagnosis. Drawing on data, clinical studies, and anecdotes from his own practice, Welch builds a solid, accessible case against the belief that more screening always improves health care.

Financial Times Best Book of the Year An Economist Best Book of the Year A Washington Post Notable Book of the Year What is it like to be a brain surgeon? How does it feel to hold someone's life in your hands, to cut into the stuff that creates thought, feeling, and reason? How do you live with the consequences of performing a potentially lifesaving operation when it all goes wrong? In neurosurgery, more than in any other branch of medicine, the doctor's oath to "do no harm" holds a bitter irony. Operations on the brain carry grave risks. Every day, leading neurosurgeon Henry Marsh must make agonizing decisions, often in the face of great urgency and uncertainty. If you believe that brain surgery is a precise and exquisite craft, practiced by calm and detached doctors, this gripping, brutally honest account will make you think again. With astonishing compassion and candor, Marsh reveals the fierce joy of operating, the profoundly moving triumphs, the harrowing disasters, the haunting regrets, and the moments of black humor that characterize a brain surgeon's life. Do No Harm provides unforgettable insight into the countless human dramas that take place in a busy modern hospital. Above all, it is a lesson in the need for hope when faced with life's most difficult decisions.

narrative leaves no space for discussion around the potential adverse outcomes of medical treatment. Through research and interviews with physicians, nurses, administrators, and many patients, Dr. Ofri explores the causes of medical error, and points to the changes needed to reduce risk of negative outcomes—including death. She advocates for changes as small (and proven) as checklists and as large as full-scale culture shifts in the relationship between medical staff and their patients. Woven through the book is the particularly harrowing tale of one patient, Jay, whose experience with a seemingly innocuous mistake likely cost him his life. These stories force us to reconsider what happens when the medical system does us harm.

Doing Harm

This is the first book to define and explore Black fatigue, the intergenerational impact of systemic racism on the physical and psychological health of Black people—and explain why and how society needs to collectively do more to combat its pernicious effects. Black people, young and old, are fatigued, says award-winning diversity and inclusion leader Mary-Frances Winters. It is physically, mentally, and emotionally draining to continue to experience inequities and even atrocities, day after day, when justice is a God-given and legislated right. And it is exhausting to have to constantly explain this to white people, even—and especially—well-meaning white people, who fall prey to white fragility and too

Download Ebook How We Do Harm A Doctor Breaks Ranks About Being Sick In America Otis Webb Brawley

often are unwittingly complicit in upholding the very systems they say they want dismantled. This book, designed to illuminate the myriad dire consequences of “living while Black,” came at the urging of Winters's Black friends and colleagues. Winters describes how in every aspect of life—from economics to education, work, criminal justice, and, very importantly, health outcomes—for the most part, the trajectory for Black people is not improving. It is paradoxical that, with all the attention focused over the last fifty years on social justice and diversity and inclusion, little progress has been made in actualizing the vision of an equitable society. Black people are quite literally sick and tired of being sick and tired. Winters writes that “my hope for this book is that it will provide a comprehensive summary of the consequences of Black fatigue, and awaken activism in those who care about equity and justice—those who care that intergenerational fatigue is tearing at the very core of a whole race of people who are simply asking for what they deserve.”

When We Do Harm

An eye-opening exploration of blood, the lifegiving substance with the power of taboo, the value of diamonds and the promise of breakthrough science Blood carries life, yet the sight of it makes people faint. It is a waste product and a commodity pricier than oil. It can save lives and transmit deadly infections. Each one of us has roughly nine pints of it, yet many don't even know their own blood type. And for all its ubiquitousness, the few tablespoons of blood discharged by 800 million women are still regarded as taboo: menstruation is perhaps the single most demonized biological event. Rose George, author of *The Big Necessity*, is renowned for her intrepid work on topics that are invisible but vitally important. In *Nine Pints*, she takes us from ancient practices of bloodletting to the breakthrough of the "liquid biopsy," which promises to diagnose cancer and other diseases with a simple blood test. She introduces Janet Vaughan, who set up the world's first system of mass blood donation during the Blitz, and Arunachalam Muruganatham, known as "Menstrual Man" for his work on sanitary pads for developing countries. She probes the lucrative business of plasma transfusions, in which the US is known

as the “OPEC of plasma.” And she looks to the future, as researchers seek to bring synthetic blood to a hospital near you. Spanning science and politics, stories and global epidemics, *Nine Pints* reveals our life's blood in an entirely new light. *Nine Pints* was named one of Bill Gates recommended summer reading titles for 2019.

In this shocking, hard-hitting expose in the tradition of Naomi Klein and Barbara Ehrenreich, the editorial director of *Feministing.com*, reveals how inadequate, inappropriate, and even dangerous treatment threatens women’s lives and well-being. Editor of the award-winning site *Feministing.com*, Maya Dusenbery brings together scientific and sociological research, interviews with experts within and outside the medical establishment, and personal stories from women across the country to provide the first comprehensive, accessible look at how sexism in medicine harms women today. Dusenbery reveals how conditions that disproportionately affect women, such as autoimmune diseases, chronic pain conditions, and Alzheimer’s disease, are neglected and woefully under-researched. “Contested” diseases, such as fibromyalgia and chronic fatigue syndrome, that are 70 to 80 percent female-dominated are so poorly understood that they have not yet been fully accepted as “real” conditions by the whole of the profession. Meanwhile, despite a wealth of evidence showing the impact of biological difference between the sexes in everything from drug responses to symptoms to

risk factors for various diseases—even the symptoms of a heart attack!—medicine continues to take a one-size-fits-all approach: that of a 70 kilogram white man. In addition, women are negatively impacted by the biases and stereotypes that dismiss them as "chronic complainers," leading to long delays—often years long—to get diagnosed. The consequences are catastrophic. Offering a clear-eyed explanation of the root causes of this insidious and entrenched bias and laying out its effects, *Doing Harm* will change the way we look at healthcare for women.

(The original edition has sold more than 110,000 copies.) Restorative Justice, with its emphasis on identifying the justice needs of everyone involved in a crime, is a worldwide movement of growing influence that is helping victims and communities heal, while holding criminals accountable for their actions. This is not soft-on-crime, feel-good philosophy, but rather a concrete effort to bring justice and healing to everyone involved in a crime. In *The Little Book of Restorative Justice*, Zehr first explores how restorative justice is different from criminal justice. Then, before letting those appealing observations drift out of reach into theoretical space, Zehr presents Restorative Justice practices. Zehr undertakes a massive and complex subject and puts it in graspable form, without reducing or trivializing it. This resource is also suitable for academic classes and workshops, for conferences and trainings, as well as for the layperson interested in understanding this innovative and influential movement.

Some people suffer from chronic, debilitating disorders for which no conventional treatment brings relief. Can marijuana ease their symptoms? Would it be breaking the law to turn to marijuana as a medication? There are few sources of objective, scientifically sound advice for people in this situation. Most books about marijuana and medicine attempt to promote the views of advocates or opponents. To fill the gap between these extremes, authors Alison Mack and Janet Joy have extracted

critical findings from a recent Institute of Medicine study on this important issue, interpreting them for a general audience. *Marijuana As Medicine?* provides patients--as well as the people who care for them--with a foundation for making decisions about their own health care. This empowering volume examines several key points, including: Whether marijuana can relieve a variety of symptoms, including pain, muscle spasticity, nausea, and appetite loss. The dangers of smoking marijuana, as well as the effects of its active chemical components on the immune system and on psychological health. The potential use of marijuana-based medications on symptoms of AIDS, cancer, multiple sclerosis, and several other specific disorders, in comparison with existing treatments. *Marijuana As Medicine?* introduces readers to the active compounds in marijuana. These include the principal ingredient in Marinol, a legal medication. The authors also discuss the prospects for developing other drugs derived from marijuana's active ingredients. In addition to providing an up-to-date review of the science behind the medical marijuana debate, Mack and Joy also answer common questions about the legal status of marijuana, explaining the conflict between state and federal law regarding its medical use. Intended primarily as an aid to patients and caregivers, this book objectively presents critical information so that it can be used to make responsible health care decisions. *Marijuana As Medicine?* will also be a valuable resource for policymakers, health care providers, patient counselors, medical faculty and students--in short, anyone who wants to learn more about this important issue.

How We Do Harm

From the nation's leading experts in healthcare safety—the first comprehensive guide to delivering care that ensures the safety of patients and staff alike. One of the primary tenets among healthcare professionals is, “First, do no harm.” Achieving this goal means ensuring the safety of both patient and caregiver. Every year in the United States alone, an estimated 4.8 million hospital patients suffer serious harm that is preventable. To address this industry-wide problem—and provide evidence-based solutions—a team of award-winning safety specialists from Press Ganey/Healthcare Performance Improvement have applied their decades of experience and research to the subject of patient and workforce safety. Their mission is to achieve zero harm in the healthcare industry, a lofty goal that some hospitals have already accomplished—which you can, too. Combining the latest advances in safety science, data technology, and high reliability solutions, this step-by-step guide shows you how to implement 6 simple principles in your workplace.

1. Commit to the goal of zero harm.2. Become more patient-centric.3. Recognize the interdependency of safety, quality, and patient-centricity.4. Adopt good data and analytics.5. Transform culture and leadership.6. Focus on accountability and execution. In *Zero Harm*, the world's leading safety experts share practical, day-to-day solutions that combine the latest tools and technologies in healthcare today with the best safety practices from high-risk, yet high-reliability industries, such as aviation, nuclear power, and the United States military. Using these field-tested methods, you can develop new leadership initiatives, educate workers on the universal skills that can save lives, organize and train safety action teams, implement reliability management systems, and create long-term, transformational change. You'll read case studies and success stories from your industry colleagues—and discover the most effective ways to utilize patient data, information sharing, and other up-to-the-minute technologies. It's a complete workplace-ready program that's proven to reduce preventable errors and produce measurable results—by putting the patient, and safety, first.

Moral Disengagement

Examines the medical controversy surrounding the use and potential benefits of finasteride, a steroid drug shown to drastically cut incidents of prostate cancer among low risk men, as well as cause more aggressive cancers in a small subgroup of patients.

Hacking School Discipline

We all feel uncomfortable about the role of profit in healthcare, we all have a vague notion that the global \$600bn pharmaceutical industry is somehow evil and untrustworthy, but that sense rarely goes beyond a flaky, undifferentiated new age worldview. Bad Pharma puts real flesh on those bones, revealing the rigged evidence used by drug companies. Bad information means bad treatment decisions, which means patients suffer and die: there is no climactic moment of villainy, but drugs are used which are overpriced, less effective, and have more side effects. There are five cheap, easy things we can do to fix the problem. Bad Pharma takes a big dirty secret out into the open, and will provide a single focus for concerns people have both inside and outside medicine.

Bad Pharma

When his teenage son Christopher, brain-damaged in an auto accident, developed a 105-degree fever following weeks of unconsciousness, John Campbell asked the attending physician for help. The doctor refused. Why bother? The boy's life was effectively over. Campbell refused to accept this verdict. He demanded treatment and threatened legal action. The doctor finally relented. With treatment, Christopher's temperature—which had eventually reached 107.6

degrees—subsided almost immediately. Soon afterward the boy regained consciousness and was learning to walk again. This story is one of many Wesley J. Smith recounts in his award-winning classic critique of the modern bioethics movement, *Culture of Death*. In this newly updated edition, Smith chronicles how the threats to the equality of human life have accelerated in recent years, from the proliferation of euthanasia and the Brittany Maynard assisted suicide firestorm, to the potential for “death panels” posed by Obamacare and the explosive Terri Schiavo controversy. *Culture of Death* reveals how more and more doctors have withdrawn from the Hippocratic Oath and how “bioethicists” influence policy by posing questions such as whether organs may be harvested from the terminally ill and disabled. This is a passionate yet coolly reasoned book about the current crisis in medical ethics by an author who has made “the new thanatology” his consuming interest.

The Little Book of Restorative Justice

An American Cancer Society chief medical and scientific officer presents a call for the rational and skeptical practice of medicine that does not under-serve or favor patients based on wealth or insurance coverage and follows scientifically based protocols that do not kowtow to trendy drugs.

Bad Medicine

Doing harm seems much harder to justify than merely allowing harm. If a boulder is rushing towards Bob, you may refuse to save Bob's life by driving your car into the path of the boulder if doing so would cost you your own life. You may not push the boulder towards Bob to save your own life. This principle—the Doctrine of Doing and Allowing—requires defence. Does the distinction between doing and allowing fall apart under scrutiny? When lives are at stake, how can it matter whether harm is done or allowed? Drawing on detailed analysis of the distinction between doing and allowing, Fiona Woollard argues that the Doctrine of Doing and

Allowing is best understood as a principle that protects us from harmful imposition. Such protection against imposition is necessary for morality to recognize anything as genuinely belonging to a person, even that person's own body. As morality must recognize each person's body as belonging to her, the Doctrine of Doing and Allowing should be accepted. Woollard defends a moderate account of our obligations to aid, tackling arguments by Peter Singer and Peter Unger that we must give most of our money away and arguments from Robert Nozick that obligations to aid are incompatible with self-ownership.

The Final Act

What should happen when doctors and parents disagree about what would be best for a child? When should courts become involved? Should life support be stopped against parents' wishes? The case of Charlie Gard, reached global attention in 2017. It led to widespread debate about the ethics of disagreements between doctors and parents, about the place of the law in such disputes, and about the variation in approach between different parts of the world. In this book, medical ethicists Dominic Wilkinson and Julian Savulescu critically examine the ethical questions at the heart of disputes about medical treatment for children. They use the Gard case as a springboard to a wider discussion about the rights of parents, the harms of treatment, and the vital issue of limited resources. They discuss other prominent UK and international cases of disagreement and conflict. From opposite

sides of the debate Wilkinson and Savulescu provocatively outline the strongest arguments in favour of and against treatment. They analyse some of the distinctive and challenging features of treatment disputes in the 21st century and argue that disagreement about controversial ethical questions is both inevitable and desirable. They outline a series of lessons from the Gard case and propose a radical new 'dissensus' framework for future cases of disagreement. This new book critically examines the core ethical questions at the heart of disputes about medical treatment for children. The contents review prominent cases of disagreement from the UK and internationally and analyse some of the distinctive and challenging features around treatment disputes in the 21st century. The book proposes a radical new framework for future cases of disagreement around the care of gravely ill people.

From Charm to Harm:

Using the examples of Vioxx, Celebrex, cholesterol-lowering statin drugs, and anti-depressants, *Overdosed America* shows that at the heart of the current crisis in American medicine lies the commercialization of medical knowledge itself. Drawing on his background in statistics, epidemiology, and health policy, John Abramson, M.D., reveals the ways in which the drug companies have misrepresented statistical evidence, misled doctors, and compromised our health. The good news is that the best scientific evidence shows that reclaiming responsibility for your
