The Handbook to IFRS Transition and to IFRS U.S. GAAP Dual Reporting

A concise FAQ guide to IFRS principles and practices Co-written by Steven Collings, winner of Accounting Technician of the Year at the British Accountancy Awards 2011, this book is a comprehensive guide to International Financial Reporting Standards (IFRS) which became mandatory in the EU in 2005, and they will almost certainly be adopted by most other developed countries in the near future. Unlike US-GAAP and other sets of standards, the IFRS are principles-based rather than rules-based, putting the onus of interpretation more on users than has previously been the case. Under IFRS users must understand the economic substance of operations, and they must be able to make assumptions, hypotheses, and estimations leading to an accounting treatment consistent with the general objectives of and principles behind IFRS financial reporting. In a handy, easy-to-navigate Q&A format, Frequently Asked Questions on IFRS provides accounting and finance professionals with the answers to some of the most commonly asked questions on the new standards. Covering the often complicated areas of accounting for financial instruments, tangible and intangible assets, provisions, and revenue recognition, the book also contains a valuable overview of the standards and the thinking behind them. Includes a comprehensive section on the new IFRS for small and medium enterprises Contains real-world examples from financial reports; a glossary of commonly used terms; and a 'Test Your Knowledge' section Provides a simple way to get up to speed on these often confusing, principles-based standards

The Balanced Scorecard translates a company's vision and strategy into a coherent set of performance measures. The four perspectives of the scorecard--financial measures, customer knowledge, internal business processes, and learning and growth--offer a balance between short-term and long-term objectives, between outcomes desired and performance drivers of those outcomes, and between hard objective measures and softer, more subjective measures. In the first part, Kaplan and Norton provide the theoretical foundations for the Balanced Scorecard; in the second part, they describe the steps organizations must take to build their own Scorecards; and, finally, they discuss how the Balanced Scorecard can be used as a driver of change.

IFRS Convergence

This guide is designed to assist all those who are responsible for providing or overseeing formal education or practical experience that forms part of the initial professional development of aspiring professional accountants, or the continuing professional development of professional accountants. It is particularly relevant to professional accountancy organizations. It is also intended for policy makers and regulators who determine which organizations are licensed to certify professional accountants and related specializations, for example, audit professionals. The purpose of the guide is to

- increase understanding of the gap between the current skills of many accountants in some regions and the skills that are relevant in increasingly digitized and globalized economies;
- convey the essential features of Competency-Based Accounting Education, Training, and Certification (CBAETC);
- provide a common reference framework for organizations pursuing CBAETC and the consultants working with them;
- assist countries in developing in-country plans and implementing in-country processes that produce accountants with higher-order skills relevant to their economy's rapidly evolving needs; and
- improve financial reporting, auditing, and regulation.

This guide complements and builds on International Education Standards (IES™) of the International Accounting Education Standards Board™ (IAESB™).

IFRS 9 and CECL Credit Risk Modelling and Validation covers a hot topic in risk management. Both IFRS 9 and CECL accounting standards require Banks to adopt a new perspective in assessing Expected Credit Losses. The book explores a wide range of models and corresponding validation procedures. The most traditional regression analyses pave the way to more innovative methods like machine learning, survival analysis, and competing risk modelling. Special attention is then devoted to scarce data and low default portfolios. A practical approach inspires the learning journey. In each section the theoretical dissertation is accompanied by Examples and Case Studies worked in R and SAS, the most widely used software

packages used by practitioners in Credit Risk Management. Offers a broad survey that explains which models work best for mortgage, small business, cards, commercial real estate, commercial loans and other credit products Concentrates on specific aspects of the modelling process by focusing on lifetime estimates Provides an hands-on approach to enable readers to perform model development, validation and audit of credit risk models

Wiley IFRS 2013

International Financial Reporting Standards (IFRS) are now mandatory in many parts of the world, including Europe, Australia and China. In addition, many countries are in the process of IFRS adoption. Lastly, foreign registrants in US companies no longer have to undertake a costly US-IFRS reconciliation. Therefore, it is clear that investors, analysts and valuers need to understand financial statements produced under IFRS to feed in to their valuations and broader investment decisions. Written by practitioners for practitioners, the book addresses valuation from the viewpoint of the analyst, the investor and the corporate acquirer. It starts with valuation theory: what is to be discounted and at what discount rate? It explains the connection between standard methodologies based on free cash flow and on return on capital. And it emphasizes that, whichever method is used, accurate interpretation of accounting information is critical to the production of sensible valuations. The authors argue that forecasts of cash flows imply views on profits and balance sheets, and that non-cash items contain useful information about future cash flows - so profits matter. The book then addresses the

implications for analysis and valuation of key aspects of IFRS including: - Pensions - Stock options - Derivatives - Provisions - Leases The text also sets out which countries use GAAP, as well as the key differences between IFRS and US GAAP treatments of these issues, in addition to their implications for analysis. A detailed case study is used to provide a step-by-step valuation of an industrial company using both free cash flow and economic profit methodologies. The authors then address a range of common valuation problems, including cyclical or immature companies, as well as the specialist accounting and modelling knowledge required for regulated utilities, resource extraction companies, banks, insurance and real estate companies. Accounting for mergers and disposals is first explained and then illustrated with a detailed potential acquisition using real companies.
