For More Than Four Decades After Gaining Independence, India, With Its Massive Size And Population, Staggering Poverty And Slow Rate Of Growth, Was Associated With The Plodding, Somnolent Elephant, Comfortably Resting On Its Achievements Of Centuries Gone By. Then In The Early 1990S The Elephant Seemed To Wake Up From Its Slumber And Slowly Begin To Change Until Today, In The First Decade Of The Twenty-First Century, Some Have Begun To See It Morphing Into A Tiger. As India Turns Sixty, Shashi Tharoor, Novelist And Essayist, Reminds Us Of The Paradox That Is India, The Elephant That Is Becoming A Tiger: With The Highest Number Of Billionaires In Asia, It Still Has The Largest Number Of People Living Amid Poverty And Neglect, And More Children Who Have Not Seen The Inside Of A Schoolroom Than Any Other Country. So What Does The Twenty-First Century Hold For India? Will It Bring The Strength Of The Tiger And The Size Of An Elephant To Bear Upon The World? Or Will It Remain An Elephant At Heart? In More Than Sixty Essays Organized Thematically Into Six Parts, Shashi Tharoor Analyses The Forces That Have Made Twenty-

GATE MECHANICAL ENGINEERING, Second Edition

In 2014, Dr. K. Radhakrishnan was named one of the top ten scientists in the world by Nature magazine—the first Indian scientist to be so honoured. Earlier that year, the Indian Space Research Organization (ISRO) successfully ran the Mars Orbiter Mission, popularly known as the ‘Mangalyaan’ mission. ISRO’s Moon Rover, scheduled for 2018, is also Radhakrishnan’s brainchild. Witness to the transformation of India’s space programme in the early 1980s, Radhakrishnan cut his teeth with the SLV-3 project, the country’s first satellite launch vehicle. He worked with stalwarts like Dr Vikram Sarabhai, Dr A.P.J. Abdul Kalam, Prof. Satish Dhawan and Mr Y.S. Rajan, wearing several different hats during his illustrious and challenging career. Radhakrishnan eventually turned major setbacks into roaring successes by his unfailing belief in human endeavour and a commitment to excellence. Packed with invaluable information and insights, this fascinating memoir takes us behind the scenes of India’s cutting-edge world of scientific achievement.

MECHANICAL AND RAC ENGINEERING (ISRO SCIENTIST-C)

ISRO pioneer R. Aravamudan narrates the gripping story of the people who built India's space research programme and how they did it - from the rocket engineers who laid the foundation to the savvy young engineers who keep Indian spaceships flying today. It is the tale of an Indian organization that defied international bans and embargos, worked with laughably meagre resources, evolved its own technology and grew into a major space power. Today, ISRO creates, builds and launches gigantic rockets which carry the complex spacecraft that form the neural network not just of our own country but those of other countries too. This is a made-in-India story like no other.

NASA's Strategic Direction and the Need for a National Consensus

On 21 November 1963, the first rocket took off from Thumba, a fishing hamlet near Thiruvananthapuram, announcing the birth of India's space programme. The rocket, the payload, the radar, the computer, the helicopter - all that was required for the launch - came from outside the country. Fifty years later, on 5 November 2013, when ISRO launched its Mars Orbiter Mission (MOM) from the Satish Dhawan Space Centre, Sriharikota, all of it had been indigenously

manufactured. Ten months after the launch, on 24 September 2014, India became the first country in the world to put a satellite around the Red Planet in the very first attempt. From Fishing Hamlet to Red Planet tracks this stupendous journey through articles, interviews and reminiscences with contributions from intellectual giants like Dr Vikram Sarabhai, Satish Dhawan, M.S. Swaminathan, Jacques Blamont, Dr A.P.J. Abdul Kalam, U.R. Rao and Dr K. Kasturirangan, among others, this is the story of India's space journey from its modest beginnings to its rendezvous with Mars.

In 1999, when hardly anyone in India transacted on the Internet, K. Vaitheeswaran co-founded India's first e-commerce company. Yet, years later, when e-commerce was exploding in India-despite enjoying first-mover advantage-Indiaplaza shut down. What went wrong? Lack of funding? Wrong strategies? Or was it 'something else'? For the first time ever, Vaitheeswaran reveals that it was indeed something else-a set of inexplicable events that destroyed what could have been a profitable business (an extreme rarity among technology start-ups). He bares his extraordinary trials and tribulations while dealing with

A top scientist is falsely accused of selling space technology secrets. A police inspector's misadventure with a Maldivian woman results in a fabricated espionage case. A faction within a political party capitalises on the case to bring down a government. An intelligence agency obligingly plays into the hands of vested interests to slow down India's space programme. And a complex investigation finally proves the allegations untrue. In this riveting book, Isro scientist S Nambi Narayanan - who was falsely accused of espionage in ISRO spy case of the 1990s - and senior journalist Arun Ram meticulously unpick

the ISRO spy case, revisit old material and discover new details to expose the international plot that delayed India's development of a cryogenic engine by at least a decade. It took four years for the CBI to exonerate Nambi, but his fight for justice to ensure action against the officers who faked the case and tortured him in custody continues. This book is as much a history of the early days of India's ambitious space programme as it is a record of one of the most sensational cases that enthralled the nation long before the era of online updates and 24-hour news cycles.

The SHROUDED SATANISM in FEUDAL LANGUAGES!

The book addresses the overall integrated design aspects of a space transportation system involving several disciplines like propulsion, vehicle structures, aerodynamics, flight mechanics, navigation, guidance and control systems, stage auxiliary systems, thermal systems etc. and discusses the system approach for design, trade off analysis, system life cycle considerations, important aspects in mission management, the risk assessment, etc. There are several books authored to describe the design aspects of various areas, viz., propulsion, aerodynamics, structures, control, etc., but there is no book which presents space transportation system (STS) design in an integrated manner. This book attempts to fill this gap by addressing systems approach for STS design, highlighting the integrated design aspects, interactions between various subsystems and interdependencies. The main focus is towards the complex integrated design to arrive at an optimum, robust and cost effective space transportation system. The orbital mechanics of satellites including different coordinate frames, orbital perturbations and orbital transfers are explained. For launching the satellites to meet specific mission requirements, viz., payload/orbit, design considerations, giving step by step procedure are briefed. The selection methodology for launch vehicle configuration, its optimum staging and the factors which influence the vehicle performance are summarized. The influence of external, internal and

dynamic operating environments experienced by the vehicle subsystems and the remedial measures needed are highlighted. The mission design strategies and their influence on the vehicle design process are elaborated. The various critical aspects of STS subsystems like flight mechanics, propulsion, structures and materials, thermal systems, stage auxiliary systems, navigation, guidance and control and the interdependencies and interactions between them are covered. The design guidelines, complexity of the flight environment and the reentry dynamics for the reentry missions are included. The book is not targeted as a design tool for any particular discipline or subsystem. Some of the design related equations or expressions are not attempted to derive from the first principle as this is beyond the scope of this book. However, the important analytical expressions, graphs and sketches which are essential to provide in-depth understanding for the design process as well as to understand the interactions between different subsystems are appropriately included.

ISRO: A Personal History

GATE Computer Science and Information Technology 2018

This book can be downloaded as a PDF file from here. This book I wrote, I presume, in 2013. It is a huge book of epic parameters. The basic underlying theme is the essential difference, planar-languages has with feudal-languages. Feudal languages are quite

Get Free Isro Previous Year Question Papers Mechanical

powerful, in that, the moment they are spoken, the social structure and human relationships change powerfully into a custom-design hierarchy, depending on the language. When planar-languages are spoken, the social system and human relationship shift towards a planar arrangement. For a planar-language social system to experience feudal-language communication is a very creepy experience. Individuals can go berserk. Mental trauma and emotional terrors, which cannot be understood by the native-English, will effect individuals selectively; with the others having no idea that some individuals among them have been effected. This is a very vital piece of information which all native-English nations should understand. For, youngsters, persons engaged in professions which are defined in pejorative usages in feudal-languages, and various others can literally go mentally ill, when accosted or connected with feudal-language speakers. The issue of Gun violence in the US in which innately decent and peaceful persons go homicidal can be directly or indirectly connected to the affliction caused by feudal languages. I very specifically mention the name of Adam Purinton in this connection. It is dangerous to allow bilingualism to run riot in native-English nations, if the other language is a feudal-language. For, feudal languages do have carnivorous codes. Inside feudal-language nations, people do keep a distance from lower-positioned persons and groups of persons, who can, if they want, bite them verbally, without the use of any abusive word, profanity or expletive. Simply change the indicant-word level of certain key words. The terrific damage is done. Modern psychology and psychiatry can be utter nonsense. They do not know

Get Free Isro Previous Year Question Papers Mechanical

about these things. Verbal signals can trigger various kinds of switch-on and switch-off effects in others. Instead of focusing on the person who has been affected, it would be more intelligent and effective to find out who is sending the switch-on and switch-off signals. And send them home to their home-lands. Feudal languages can create mutation in physical features, emotional balance, human relationships, national economy, and stature of professions, and in many more things about which native-English nations have no information on. It is dangerous for the native-English to learn feudal-languages, when living in the midst of feudal-language speakers. It would only have the effect of allowing the feudal-language speakers to place a powerful grip on them, physically and mentally. In fact, the feudal languages speakers would literally be able to control the emotional stability of the native-English speakers, if they can be made to understand feudal languages. It would be like string-puppetry. The native-English who have learned feudal languages can literally be made to dance, yell and jump as per the pull and push that can be conveyed by means of the holding strings of the verbal codes in feudal-languages. At the same time, for feudal language speakers, knowing English is a great advantage. It would give a very powerful pathway and bridge for them to crossover the various gorges in their own communication code and enter into the placid native-English locations. As of now, almost all native-English nations are simply getting dismantled and disarrayed by the spread of feudal-language speakers inside their vital areas. Things are going into various errors. Much worse is in the offing, unless effective steps are taken to forestall them. I

wrote this book some five years back. In this book, a bit of the personal experiments I have done many years ago on certain individuals has been mentioned. This book is not focused on the internal codes in feudal-languages. This book moves through the peripheral areas of many other items, including the English colonial rule in the subcontinent.

Ramanujan's Notebooks

This edition has been thoroughly revised and enlarged. It is still considered to be a must for all those sitting Civil Engineering examinations.

My Odyssey

Ready To Fire

During the years 1903-1914, Ramanujan recorded many of his mathematical discoveries in notebooks without providing proofs. Although many of his results were already in the literature, more were not. Almost a decade after Ramanujan's death in 1920, G.N. Watson and B.M. Wilson began to edit his notebooks but never completed the task. A photostat edition, with no editing, was published by the Tata Institute of Fundamental Research in Bombay in 1957. This book is the second of four volumes devoted to the editing of Ramanujan's Notebooks. Part I, published in 1985, contains an account of Chapters 1-9 in the second notebook as well as a description of Ramanujan's quarterly reports. In this volume, we examine Chapters 10-15 in Ramanujan's second notebook. If a result is known, we provide references in the literature where proofs may be found; if a result is not known, we attempt to prove it. Not only are the results fascinating, but, for the most part, Ramanujan's methods remain a mystery. Much work still needs to be done. We hope readers will strive to discover Ramanujan's thoughts and further develop his beautiful ideas.

Integrated Design for Space Transportation System

This book follows a logical concept building approach rather than only formula based, as offered by other books. The objective has been to structure a complete examination-oriented reference book covering the fundamental aspects of theory at a glance before proceeding to their relevant questions. The latest questions (2017 and 2018) from IES with their complete explanations have been given at the end of the text to impart a valuable insight into problem-solving approach.

Failing to Succeed

The National Aeronautics and Space Administration (NASA) is widely admired for astonishing accomplishments since its formation in 1958. Looking ahead over a comparable period of time, what can the nation and the world expect of NASA? What will be the agency's goals and objectives, and what will be the strategy for achieving them? More fundamentally, how will the goals, objectives, and strategy be established and by whom? How will they be modified to reflect changes in science, technology, national priorities, and available resources? In late 2011, the United States Congress directed the NASA Office of Inspector General to commission a "comprehensive independent assessment of NASA's strategic direction and agency management." Subsequently, NASA requested that the National Research Council (NRC) conduct this independent assessment. In the spring of
