Connect with Santrock 6th edition and connect with success. Informed and driven by research. At McGraw-Hill, we have spent thousands of hours with you and your students, working to understand the key needs and concerns you face in Human Development courses. The most common topics raised include managing the vast amount of content inherent to a Lifespan course and ensuring the dependability of the assigned material--is it current and accurate? The result of this research is John Santrock's A Topical Approach to Lifespan Development 6e. Santrock 6e ensures students complete and understand the assigned material in a number of ways. Santrock's hallmark Learning Goals pedagogy provides a comprehensive roadmap to the text material, clearly pointing out the core concepts fundamental to students' learning and performance. An adaptive learning system increases students' efficiency in studying by identifying what they know and don't know and providing in-the-moment guides to learning what they do not. The research and development of the 6th edition indicated that students said that highlighting connections among the different aspects of life-span development would help them to better understand the concepts. This recurring theme of connections--Developmental Connections, Topical Connections, Connecting Development to Life, Connecting with Careers, and Connections through Research--ties together concepts from across chapters to reinforce the learning process and connects the material to students' everyday lives and future aspirations. And the new Milestones video and assessment program helps bring the course material to life, so your students can witness development as

it unfolds. And of course, all of this material is informed by our unique board of expert contributors--a who's who of developmental psychology--who ensure the material is as accurate and up-to-date as possible.

The Promise of Adolescence

The Oxford Handbook of Stress, Health, and Coping is an essential reference work for students, practitioners, and researchers across the fields of health psychology, medicine, and palliative care. Featuring 22 topic-based chapters -- including two by Folkman -- this volume offers unprecedented coverage of the two primary research topics related to stress and coping: mitigating stress-related harms and sustaining well-being in the face of stress. Both topics are addressed within their relevant contexts, including chronic illness, calamity, bereavement, and social hardship. This handbook is sure to serve as the benchmark publication in this growing field for years to come.

Psychology in Action

An authoritative, up-to-date guide for psychologists, psychiatrists, pediatricians and other professionals working with vulnerable and at-risk children Child Psychology and Psychiatry, Third Edition is an indispensable resource for psychologists and psychiatrists in training, as well as experienced clinicians who want to stay abreast of important recent developments in the field. Comprehensive in

Psychology 2e

The third edition of Life Span Human Development helps students gain a deeper understanding of the many interacting forces affecting development from infancy, childhood, adolescence and adulthood. It includes local, multicultural and indigenous issues and perspectives, local research in development, regionally relevant statistical information, and National guidelines on health. Taking a unique integrated topical and chronological approach, each chapter focuses on a domain of development such as physical growth, cognition, or personality, and traces developmental trends and influences in that domain from infancy to old age. Within each chapter, you will find sections on four life stages: infancy, childhood, adolescence and adulthood. This distinctive organisation enables students to comprehend the processes of transformation that occur in key areas of human development. This text also includes a MindTap course offering, with a strong suite of resources, including videos and the chronological sections within the text can be easily customised to suit academic and student needs.

This fully updated second edition is written

specifically for health science and nursing students in Australia and New Zealand. Authored by the highly regarded Patricia Barkway, with a diverse range of expert contributors, this Elsevier e-book interprets psychology for nurses, as well as for students of paramedicine, occupational therapy, physiotherapy, public health, pharmacy, psychology, social work and midwifery. Psychology for Health Professionals 2e e-book examines essential psychological theories, placing them within a social context. Acknowledging increasing awareness that behaviour is influenced as much by external factors as biological and psychological ones, the book's first half outlines psychological, lifespan and social theories, then applies them to contemporary health issues in later chapters. A key focus of this leading psychology e-book is examining individual personality and psychological theory within the social context of people's lives. New content includes current, evidence-based research, references and clinical examples relevant to interdisciplinary, contemporary healthcare practice. Issues of cultural safety and awareness have been strengthened throughout; there is a new section on chronic illness and a focus on recovery. This introductory psychology e-book does not assume its readers will have prior 'psychology' knowledge, yet it can easily be used well beyond first-year university.

Lifespan, 2nd Edition is ideal for occupational therapy, physical therapy, and other rehabilitation disciplines. It provides a broad, occupation-based viewpoint of development and performance throughout all life stages with an emphasis on the factors that influence daily participation and optimal performance of desired daily life tasks. The authors use a life course conceptual model as an organizational foundation for clinical reasoning to help readers understand how to implement the activity- and participation-based goals and outcomes for therapy. Written by an occupational therapist and a physical therapist, the book incorporates chapters by leading experts in human development, giving users cutting-edge information and a wide range of perspectives. By integrating information from the International Classification of Function and Disability (ICF) with a developmental life-task perspective, the book gives both newcomers and experienced professionals an essential, contemporary frame of reference. Educational Psychology

Adolescenceâ€"beginning with the onset of puberty and ending in the mid-20sâ€"is a critical period of development during which key areas of the brain mature and develop. These changes in brain structure, function, and connectivity mark adolescence as a period of opportunity to discover new vistas, to form relationships with peers and adults, and to explore one's developing identity. It is also a period of resilience that can ameliorate childhood setbacks and set the stage for a thriving trajectory over the life course. Because adolescents comprise nearly one-fourth of the entire U.S. population, the nation needs policies and practices that will better leverage these developmental opportunities to harness the promise of adolescenceâ€"rather than focusing myopically on containing its risks. This report examines the neurobiological and socio-behavioral science of adolescent development and outlines how this knowledge can be applied, both to promote adolescent well-being, resilience, and development, and to rectify structural barriers and inequalities in opportunity, enabling all adolescents to flourish.

This thorough revision of the highly successful first edition of Life-Span Development offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasises that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters Leonie Sugarman outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Levinson and Gould. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of developmental tasks; as a series of key life events and transitions or as a narrative construction which creates a sense of dynamic continuity. A final chapter looks at how people cope, the resources that are available and the theoretical and practical issues regarding interventions to assist them in the process. New to this edition is increased coverage of the topical issue of successful ageing and a new chapter on the increasingly popular narrative approach to

lifespan development. This edition is also more student-friendly with exercises in self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work.

The Oxford Handbook of Stress, Health, and Coping

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for

care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Psychology for health professionals

This title is directed primarily towards health care professionals outside of the United States. It is written specifically to meet the needs of nursing students undertaking the common foundation programme. It aims to explain how and why sensitive, holistic and evidence-based nursing care is carried out. Therefore it is relevant to students who will enter all branches of nursing and includes material that is both common to all and specific to each branch. The book aims to provide all students on foundation nursing and health care programmes with material of sufficient depth/breadth to achieve the NMC outcomes required for entry into the branch programmes. There is an emphasis not only on the theory that underpins nursing practice in the common foundation programme but also on nursing skills which form an increasingly emphasized part of the programme. The chapters have been reviewed by experts from each branch and also clinical skills to ensure the content reflects each branch accurately and appropriately. Emphasis on clinical skills & lifelong learning Realistic
