'I believe that 'emotion' is where it's at' Tom Peters For far too long, emotions have been ignored in favour of rationality and efficiency, but breakthroughs in brain science have revealed that people are primarily emotional decision-makers. Many companies have not yet accepted that fact, much less acted on it. In this fully revised edition, Emotionomics will help you to understand emotions in terms of business opportunities - both in the marketplace and in the workplace. In today's highly competitive marketplace where many products look alike, it is the emotional benefit that can make the difference. At the same time, companies with engaged, productive work forces will undoubtedly achieve competitive advantage. Dan Hill's book draws on insights gathered through facial coding, the single best viable means of measuring and managing the emotional response of customers and employees, to help you to leverage emotions for business success in terms of branding, product design, advertising, sales, customer satisfaction, leadership and employee management. Emotions matter and Emotionomics will help you to step closer to customers and employees, but step ahead of your competitors.

While social and emotional learning (SEL) is most familiar as compartmentalized programs separate from academics, the truth is, all learning is social and emotional. What teachers say, the values we express, the materials and activities we choose, and the skills we prioritize all influence how students think, see themselves, and interact with content and with others. If you teach kids rather than standards, and if you want all kids to get what they need to thrive, Nancy Frey, Douglas Fisher, and Dominique Smith offer a solution: a comprehensive, five-part model of SEL that's easy to integrate into everyday content instruction, no matter what subject or grade level you teach. You'll learn the hows and whys of Building students' sense of identity and confidence in their ability to learn, overcome challenge, and influence the world around them. Helping students identify, describe, and regulate their emotional responses. Promoting the cognitive regulation skills critical to decision making and problem solving. Fostering students' social skills, including teamwork and sharing, and their ability to establish and repair relationships. Equipping students to becoming informed and involved citizens. Along with a toolbox of strategies for addressing 33 essential competencies, you'll find real-life examples highlighting the many opportunities for social and emotional learning within the K-12 academic curriculum. Children's social and emotional development is too important to be an add-on or an afterthought, too important to be left to chance. Managing Through the One Card System

Are the risks of smoking exaggerated? Has there been an open and rational discussion about the risks of smoking? This book attempts to answer these and many other questions about smoking. It provides a detailed empirical presentation on smoking behavior as a risky consumer decision. Using new empirical data based on several national and regional surveys, Viscusi addresses several issues, including: the sources of information that people have about the risks of smoking, the accuracy of their perceptions of risks associated with smoking, and the consistency of smoking decisions with other risky behavior--scrutinizing issues such as whether smokers value risk differently than those who wear safety belts. Viscusi also looks at the differences in age groups and how they assess these risks

based on public information. He provides new insight into the degree to which individuals understand smoking risks and take these risks into account in their smoking behavior. With its detailed empirical data and its examination of individual decision-making processes, this work will interest researchers in public health, public policy analysis, psychology, and economics, as well as anyone concerned with this important issue.
