Volume 28 in the series of Side Effects of Drugs Annuals (<http://www.elsevier.com/locate/series/seda>) continues to serve its primary goal: to provide clinicians and medical investigators with a reliable and critical yearly survey of new data and trends in the area of Adverse Drug Reactions and Interactions. An international team of specialists has reviewed new data and trends by selecting from the year's writing all that is truly new and informative, by critically interpreting it, and by pointing to whatever is unproven or misleading. The use of the book is enhanced by separate indexes, allowing the reader to access the text via drug name, adverse effect, or drug interaction. The current annual includes an essay by the editor, Dr Jeffrey Aronson, entitled 'Classifying Drug Adverse Reactions in the 21st Century.' In it he describes how the modern approach to classifying adverse drug reactions takes into account the dose that causes the reaction, the time-course of the reaction, and the susceptibility factors that increase the individual patient's risk, and shows how this analysis can facilitate regulatory decision making. Provides a critical yearly survey of new data and trends Includes an essay that describes the modern approach to classifying adverse drug reactions Special reviews in this Annual include, among other topics: Antipsychotic drugs and now-onset diabetes mellitus, Treating asthma during pregnancy, and MMR vaccine and autism

Neonatal Formulary

Pharmacopoeia of India

Neonatal Formulary is a unique publication that provides comprehensive guidance on the safe use of all the drugs prescribed during pregnancy and commonly given to babies during labour, delivery, and the first year of life. This new edition provides improved and detailed coverage of the many drugs that are given to women during pregnancy and during lactation where the baby's welfare must be borne in mind as well as that of the mother. Thus the whole 'pregnancy through to parenthood' journey is treated as a continuous event with information about drug use and the effects of drugs at all stages of the development from fetus to infant. Containing far more detail than is available in the British National Formulary for Children and with a companion website featuring updates related to specific drugs and dosing, Neonatal Formulary is an essential guide for neonatologists, neonatal nurses, hospital pharmacists, obstetric staff, advanced nurse practitioners and for all health care professionals caring for pregnant women and their infants in the first year of life.

Thanks to remarkable advances in modern health care attributable to science, engineering, and medicine, it is now possible to cure or manage illnesses that were long deemed untreatable. At the same time, however, the United States is facing the vexing challenge of a seemingly uncontrolled rise in the cost of health care. Total medical expenditures are rapidly approaching 20 percent of the gross domestic product and are crowding out other priorities of national importance. The use of increasingly expensive prescription drugs is a significant part of this problem, making the cost of biopharmaceuticals a serious national concern with broad political implications. Especially with the highly visible and very large price increases for prescription drugs that have occurred in recent years, finding a way to make prescription medicines and health care at large more affordable for everyone has become a socioeconomic imperative. Affordability is a complex function of factors, including not just the prices of the drugs themselves, but also the details of an individual's insurance coverage and the number of medical conditions that an individual or family confronts. Therefore, any solution to the affordability issue will require considering all of these factors together. The current high and increasing costs of prescription drugs coupled with the broader trends in overall health care costs is unsustainable to society as a whole. Making Medicines Affordable examines patient access to affordable and effective therapies, with emphasis on drug pricing, inflation in the cost of drugs, and insurance design. This report explores structural and policy factors influencing drug pricing, drug access programs, the emerging role of comparative effectiveness assessments in payment policies, changing finances of medical practice with regard to drug costs and reimbursement, and measures to prevent drug shortages and foster continued innovation in drug development. It makes recommendations for policy actions that could address drug price trends, improve patient access to affordable and effective treatments, and encourage innovations

that address significant needs in health care.

This book is a leading source of paediatric drug information. Compiled with the advice of clinical experts, this book provides essential information for all healthcare professionals involved in the prescribing, dispensing, monitoring & administration of medicines to children. It encourages the safe, effective and appropriate use of medicines in the management of childhood conditions. Updated in print every twelve months, the BNFC reflects current best practice, as well as legal and professional guidelines relating to the use of medicines. The BNF is also available online as part of Medicines Complete, on PDA and on also CD-ROM for intranets. 70 per cent of healthcare professionals have become more aware of suitable medicines & treatments as a result of using BNFC. Whereas the 'standard' BNF deals with the use of medicines for individuals of all ages, BNFC is able to focus specifically on the use of medicines in children. This is important because children respond to ill health and drug treatment in a different way to adults. BNFC deals with the drug management of childhood conditions more extensively. Infantile spasms, acute asthma, pulmonary hypertension, congenital metabolic disorders, and paediatric emergencies are just a few examples of this. BNFC covers the drug treatment of rare childhood diseases such as type 2 diabetes whose incidence is increasing. BNFC provides more information on unlicensed use of medicines ranging from fluoxetine for childhood depression to levamisole for nephrotic syndrome. BNFC includes more guidance on specialist paediatric interventions, ranging from caffeine for neonatal apnoea to intravenous ibuprofen for closure of ductus arteriosus. BNFC includes details of those medicines that are used in children in a different way to adults. While nitrazepam may be used for infantile spasms in children, it is used as a hypnotic in adults. Administering medicines to children is a challenge in itself and so BNFC provides more practical advice on this. BNFC provides more space for clearer and more comprehensive presentation of paediatric doses including neonatal doses and makes special reference to the cautions, contra-indications, side-effects, and drug interactions of medicines used in children. BNFC includes algorithms for acute paediatric life support and nomograms for calculating body surface area. BNFC includes details of unlicensed medicines that can be imported, manufactured by 'special-order', or prepared extemporaneously. BNFC provides information on the drug management of conditions that are relevant to children. Parkinson's disease and dementia, for example, are dealt with by the BNF.

National Formulary of Unani Medicine

The purpose of this book, says the author, is to show the effect of Indian medicinal practices on white civilization. Actually it achieves far more. It discusses Indian theories of disease and methods of combating disease and even goes into the question of which diseases were indigenous and which were brought to the Indian by the white man. It also lists Indian drugs that have won acceptance in the Pharmacopoeia of the United States and the National Formulary. The influence of American Indian healing arts on the medicine and healing and pharmacology of the white man was considerable. For example, such drugs as insulin and penicillin were anticipated in rudimentary form by the aborigines. Coca leaves were used as narcotics by Peruvian Indians hundreds of years before Carl Koller first used cocaine as a local anesthetic in 1884. All together, about 170 medicines, mostly botanical, were contributed to the official compendia by Indians north of the Rio Grande, about 50 more coming from natives of the Latin-American and Caribbean regions. Impressions and attitudes of early explorers, settlers, physicians, botanists, and others regarding Indian curative practices are reported by geographical regions, with British, French, and Spanish colonies and the young United States separately treated. Indian theories of disease—sorcery, taboo violation, spirit intrusion, soul loss, unfulfilled dreams and desires, and so on -and shamanistic practices used to combat them are described. Methods of treating all kinds of injuries-from fractures to snakebite-and even surgery are included. The influence of Indian healing lore upon folk or domestic medicine, as well as on the "Indian doctors" and patent medicines, are discussed. For the convenience of the reader, an index of botanical names is provided, together with a wide variety of illustrations. The disproportionate attention that has been given to the superstitious and unscientific features of aboriginal medicine has tended to obscure its real contributions to American civilization.

Meyler's Side Effects of Herbal Medicines

In the early modern Atlantic World, pharmacopoeias—official lists of medicaments and medicinal preparations published by municipal, national, or imperial governments—organized the world of healing goods, giving rise to new and valuable medical commodities such as cinchona bark, guaiacum, and ipecac. Pharmacopoeias and related texts, developed by governments and official medical bodies as a means to standardize therapeutic practice, were particularly important to scientific and colonial enterprises. They served, in part, as tools for making sense of encounters with a diversity of peoples, places, and things provoked by the commercial and colonial expansion of early modern Europe. *Drugs on the Page* explores practices of recording, organizing, and transmitting information about medicinal substances by artisans, colonial officials, indigenous peoples, and others who, unlike European pharmacists and physicians, rarely had a recognized role in the production of official texts and medicines. Drawing on examples across various national and imperial contexts, contributors to this volume offer new and valuable insights into the entangled histories of knowledge resulting from interactions and negotiations between Europeans, Africans, and Native Americans from 1500 to 1850.

Making Medicines Affordable

We all feel uncomfortable about the role of profit in healthcare, we all have a

vague notion that the global \$600bn pharmaceutical industry is somehow evil and untrustworthy, but that sense rarely goes beyond a flaky, undifferentiated new age worldview. Bad Pharma puts real flesh on those bones, revealing the rigged evidence used by drug companies. Bad information means bad treatment decisions, which means patients suffer and die: there is no climactic moment of villainy, but drugs are used which are overpriced, less effective, and have more side effects. There are five cheap, easy things we can do to fix the problem. Bad Pharma takes a big dirty secret out into the open, and will provide a single focus for concerns people have both inside and outside medicine.

India: Who's who

Regulatory affairs and pharmacological drug safety issues of Ayurvedic medicine has been overlooked by practitioners for many years. Research in Ayurveda is now a world-wide phenomenon, and several large pharmaceutical corporations are investing money for novel drug discovery from Ayurvedic sources. This book examines the regulatory and pharmacological aspects and includes extensive data on scientific evaluation carried out on Ayurvedic formulations. It will also serve as a reference book on standardization, pre-clinical studies, and clinical and toxicological studies on Ayurvedic formulations.

American Indian Medicine

The International Pharmacopoeia. -- 1981-

The VA National Formulary generated controversy, which motivated congressional scrutiny and a directive to the VA to commission this report reviewing the experience with the National Formulary and formulary system. This Institute of Medicine committee was pleased to assist the Congress with this review, in part because the committee saw in the VHA example an opportunity to understand and anticipate problems that all publicly funded programs are likely to encounter in this new age of pharmaceuticals. The Congress asked the committee to review the restrictiveness of the National Formulary, its impact on the costs and quality of care in the VHA, and how it compared to formularies and drug management practices in the private sector and in other public programs, especially Medicaid. Detailed in the pages that follow, the committee's findings and conclusions on these questions are, the committee believes, highly instructive, though not always in the ways that we anticipated.
