### **An Aid to the MRCP PACES**

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

The MRCP Part 2 Oral and Clinical component was replaced by PACES (Practical Assessment of Clinical Examination Skills) in June 2001. This text aims to match the content and level of difficulty of this examination. It contains chapters that cover all five PACES stations - respiratory and abdominal; history taking; cardiovascular and neurological; communication skills; and skin, locomotor, eyes and endocrine - and presents the ten most common diagnoses in each station. The book presents detailed information on relevant points of examination, summary of presentation, causes of the diagnosis, investigations and brief management. A communication skills chapter contains information on informing patients about diagnosis, relevant features of a disease, complications, prognosis, investigations and management.

### **How to Pass MRCP PACES in 8 Weeks**

Neurology: A Queen Square Textbook is a remarkable fusion of modern neuroscience with traditional neurology that will inform and intrigue trainee and experienced neurologists alike. Modern neuroscience has penetrated exciting and diverse frontiers into the causes, diagnosis, and treatment of neurological disease. Clinical neurology, whilst greatly enhanced by dramatic advances in molecular biology, genetics, neurochemistry and physiology, remains deeply rooted in practical traditions: the history from the patient and the elicitation of physical signs. Neurologists, neuroscientists and neurosurgeons working at Queen Square,

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

and advised by an international editorial team, have combined their expertise and experience to produce this unique text. The synthesis of clinical neurology with translational research provides a fresh perspective which is Practical Multidisciplinary Translational Integrative The blend of new science and proven practice underpins this creative approach towards investigating and improving the care of patients suffering from neurological diseases. About Queen Square The world-renowned National Hospital for Neurology & Neurosurgery and UCL Institute of Neurology, based in Queen Square, London, have an international reputation for training, research and patient care. Research at both institutions leads developments in translational medicine that are transforming the treatment of neurological disease.

### **MRCP 2**

### **Examination Paediatrics**

Covering all aspects of the syllabus, Crash Course offers students a fast way to recap on what they need to know to get through the exams with ease. Styled in an easy-to-follow, readily accessible format, each book is prepared by senior medical students or junior doctors - under faculty supervision - to give them the correct

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

level of information perfectly tailored to current curricula requirements. The series now includes improved pedagogic features and a fully revised self-assessment section, updated to meet current examination needs. Provides the exam syllabus in one place! Written by senior medical students or junior doctors – authors WHO REALLY UNDERSTAND today’s exam situation! Senior Faculty Advisors ensure complete accuracy of the text! Full artwork programme, improved ‘Hints and Tips’ boxes, and ‘Communication’ boxes help you remember the key points! Self-Assessment section – fully updated to reflect new curriculum requirements – helps you maximise your grade! Solid, accurate, user-friendly coverage provides enough detail even for those aiming at distinction! Fully updated self-assessment section – ideal for current examination practice! Includes useful ‘Learning Objectives’ at the start of each chapter. Pharmacological and disease management information updated in line with current best practice guidelines. Includes recent research findings. Discusses key aspects of patient communication – presented in easy ‘Communication’ boxes. Fully updated to include feedback from hundreds of students!

### **Neurology, ophthalmology and psychiatry**

This book is the essential revision guide for neurology in the Membership of the Royal College of Physicians (MRCP). Neurology has been rated as the most difficult subject in MRCP examinations and there has been no concise and easy-to-use

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

revision guide to help candidates through the exams until now. Neurology for MRCP is written by two experienced neurologists who have taught both the written (Part 1 and Part 2) and clinical (PACES) sections of the exam. This pioneering new book will also be useful for medical students sitting for their final examinations and for doctors who are preparing for the PLAB examination.

### **Stroke Medicine**

This title is written for MRCP candidates preparing for PACES exam in UK and rest of world. Clinical examinations in the OSCE style of marked stations are daunting for all students, whether undergraduates or MRCP candidates. The recent introduction of the 5-station PACES (Progressive Assessment of Clinical Examination Skills) exam inspired a great deal of apprehension, so the appearance of the first edition of Hall's PACES for MRCP was greatly welcomed by candidates and became an immediate success. This new edition builds on the book's reputation. It provides, in one colourful and attractive volume, complete coverage of all the most common medical cases that will be covered in PACES and similar exams. A one-volume text giving candidates complete preparation for the PACES exam within one portable volume 250 cases organised into the 5 stations of the PACES exam - respiratory and abdominal system, history taking, cardiovascular and nervous system, communication and ethics and skin, locomotion, eyes and endocrine systems Engaging question-and-answer approach at the end of each

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

case - excellent preparation for the exam Boxed tips highlight vital information - helps identify what is most important to remember Produced in full colour throughout Colour coding for each station Many more illustrations added - now over 300 clinical photographs and line drawings in colour Many more cases added, bringing the number up to 250 - 50 per station History-taking and communication skills stations now revised so that they exactly mimic the requirements of the exam

### **Neurology**

Neurology is primarily characterized by a variety of diseases which seem very similar and are therefore difficult to distinguish between. Skill at differential diagnosis is therefore absolutely paramount. Neurological Differential Diagnosis is a streamlined handbook of prioritized differential diagnosis, to be used both in clinical practice and for exam review. By presenting differential diagnosis in order of frequency and importance, this book provides a practical handbook for clinicians in training, as well as a potential resource for quick board review. Whilst the book covers the most important syndromes and disease entities, readers are referred to other texts for more exhaustive differentials. By limiting differentials in this way - to the most likely and most serious diagnoses - the reader can more easily recall relevant disease processes when faced with a particular clinical situation, whether it be a patient in the emergency room or a difficult question on the board

examination. The book specifically targets neurology residents and fellows, with overlap to neurosurgery and psychiatry. Internal medicine physicians with an interest in neurological problems and medical students looking for an edge in clinical neuroscience would also benefit from this text. The content is primarily mid-level material, in a pedagogic format. In order to organize the students' thought processes concise tables and line drawing templates are included. The book is organized into broad chapters by type of disorder and some overlap occurs between particular chapters.

## **Neurology and Pregnancy**

The second edition of Stroke Medicine incorporates considerable advances in the treatment of stroke that have occurred since the first edition published. This provides an up-to-date and easily accessible source of information on all aspects of stroke care, from acute care through to rehabilitation and secondary prevention. The new edition includes some additional updates on cardiac investigation of stroke, due to novel methods for detecting atrial fibrillation, and new trial data has been added to the chapter on Treatment of Stroke. The book includes numerous illustrations and tables presenting information in an easy-to-follow way and is designed to be used by the practising physician as a practical handbook of stroke care.

## **An Aid to the MRCP PACES**

### **PACES for the MRCP**

Covers various neurological conditions likely to be tested in the Station 3 and History Taking Station of the PACES (Practical Assessment of Clinical Examination Skills) exam. This book is divided into neurology and history taking stations, with more than 50 illustrations highlighting the important points.

### **The Neurology Short Case, Second edition**

Neurological disorders account for 10% of consultations in primary care and 20% of acute hospital admissions, yet there is good evidence that 'neurophobia' is common among medical students lost in unnecessary detail. This has led to neurology's long-established reputation as a difficult subject. This book is the antidote to neurophobia. It is divided into four sections: Section I introduces the reader to clinical neurology by summarising the basic aspects of a neurological consultation including history and examination; Section II covers neurological signs related to cranial nerves, motor and sensory system and peripheral nerve lesions; Section III comprises the major and common diseases such as headache, epilepsy,

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

stroke, Parkinson's disease and Multiple sclerosis; and Section IV addresses other main neurological problems. The scope of this book is limited to only the most fundamental principles and omits all superfluous detail - ideal for medical students needing a concise introduction to neurology and an overview for revision.

### **Crash Course: Neurology E-Book**

Get Through MRCP Part 1: BOFs provides over 600 questions and answers, allowing the reader to test their knowledge in preparation for the MRCP Part 1 examination. Questions are presented in the style used in the real examination, and answers are supplemented with useful additional explanatory material to help the reader understand why their answer was right, or wrong. The book offers a useful review of all elements of the syllabus, so the reader can feel fully prepared when they enter the examination room.

### **Medicine for MRCP**

Differential diagnosis texts for the MRCP can overload candidates with detailed information, making revision seem difficult and overwhelming. In contrast, this book avoids exhaustive lists of often rare causes and concentrates instead on a maximum of five of the most common causes in terms of prevalence for each

scenario, making revision more structured and manageable. The book includes diagnostic hints - clinical or lab clues that point towards a specific diagnosis - and a unique chapter on key ECG causes and features. Although primarily intended for MRCP Part I & II and FCPS (Pakistan) Part II candidates, this book will also be useful for undergraduate students preparing for finals.

## **Transient Global Amnesia**

You will find 792 questions of different formats, distributed into 3 chapters. The 215 multiple choice questions of chapter one will surf you onto a rapid review of information to consolidate your background knowledge of neuro-anatomy, neuro-physiology, neuro-pharmacology, neuro-pathology, etc. In addition, testing the clinical aspects of various diseases is also included. Chapter two will self-assess you in terms of how to make a provisional diagnosis, what features refute or confirm your preliminary diagnosis, how to investigate, what to do next, the best treatment option, and the prognosis of various diseases. The photographic materials are found in chapter three. You will encounter various neurological complications/manifestations/signs of system diseases as well. Brain CT scan, MRI, MRV, and EEG images, etc of common diseases will test your ability to interpret/read/analyze their diagnosis and management. Good luck!

## **A Dictionary of Neurological Signs**

Have you ever wondered why some candidates effortlessly clear MRCP PACES on their first attempt whilst others struggle? How can you harness the power of Parkinson's Law and many other practical concepts to pass MRCP PACES in just eight weeks? And what is the PACES Triangle? The answers to all these questions and more are in How to Pass MRCP PACES in 8 Weeks. In this concise guide, Dr Rory Chan takes you through all the non-clinical aspects you need to consider when tackling MRCP PACES. Although numerous great books exist to help you learn clinical information, this is the very first book to our knowledge that provides PACES-specific strategy and is a must-read prior to one of the most important exams of your medical career. We estimate that after reading this guide, you'll certainly increase your chances of passing MRCP PACES by at least 30%.

## **The Clinical Science of Neurologic Rehabilitation**

"Although it has been mooted whether the dramatic technological advances in neurological practice, (i.e., neuroimaging) might render the physical exam redundant, others maintain the central importance of neurological examination in patient management. A Dictionary of Neurological Signs seeks to elucidate the interpretation of neurological signs ("neurosemiology"): their anatomical,

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

physiological, and pathological significance." (from the Preface) The structured entries in this practical, clinical resource provide a snapshot of a wide range of neurological signs. Each entry includes: definition of the sign; brief account of the clinical technique required to elicit the sign; description of the other signs which may accompany the index sign. Where known, the entries also include neuroanatomical basis of the sign; explanation of pathophysiological and/or pharmacological background; neuropathological basis; differential diagnosis; and brief treatment details. The Dictionary provides practical, concise answers to complex clinical questions.

### **The Illustrated MRCP PACES Primer**

The forerunner to this book - Ryder, Mir & Freeman's 'An Aid to the MRCP Short Cases' - rapidly established itself as a classic and has sold over 30,000 copies. The new Progressive Assessment of Clinical Examination Skills (PACES) has replaced the old short case exam and, as a result, the authors have revised, reworked and extended their highly successful text so that it continues to address the study needs of candidates. This new revision aid is now presented in two volumes: An Aid to the MRCP PACES Volume 1: Stations 1, 3 and 5 An Aid to the MRCP PACES Volume 2: Stations 2 and 4 This Volume covers Station 2 'History Taking' and Station 4 'Communication Skills'. In the 'History Taking' section at least 50 examples of each type of question and case are included, together with scenarios

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

with simulated patients. The focus of the book is very much on the examiners' expectations so that candidates have a true picture of the areas on which they are being tested. Station 4 'Communication Skills' also covers the ethical issues in the doctor-patient relationship, such as managing organ transplantation, consenting for hospital post-mortem, etc. Also included in this Volume is the 'Experiences and Anecdotes' chapter providing real quotes from both candidates and examiners - this helps the candidate to avoid the more common pitfalls of the exam.

### **The MRCP PACES Handbook**

The forerunner to this book - Ryder, Mir & Freeman's 'An Aid to the MRCP Short Cases' - rapidly established itself as a classic and has sold over 30,000 copies. The new Progressive Assessment of Clinical Examination Skills (PACES) has replaced the old short case exam and, as a result, the authors have revised, reworked and extended their highly successful text so that it continues to address the study needs of candidates. This new revision aid is now presented in two volumes: An Aid to the MRCP PACES Volume 1: Stations 1, 3 and 5 An Aid to the MRCP PACES Volume 2: Stations 2 and 4 This Volume covers Station 1 'Respiratory and Abdominal Systems', Station 3 'Cardiovascular and Neurological Systems' and Station 5 'Skin, Locomotor, Eyes and the Endocrine System'. The 200 cases have been written in accordance with the new examining and marking schemes used for the exam. They provide an invaluable training and revision aid for all candidates.

## **Get Through MRCP Part 1: BOFs**

This new book is a highly structured case-based text to help candidates pass the new MRCP PACES (Practical Assessment of Clinical Examination Skills) examination. Its contents correspond to the five clinical stations of the exam and the systems that each contains. Each system is covered in a structured way, providing an examination scheme followed by a series of detailed case-based clinical scenarios. The book also covers the communication and history-taking skills and ethics stations which are new to this exam. Designed to thoroughly prepare candidates for the Practical Assessment of Clinical Examination Skills (PACES). Written as a systematic text which exactly complements the format of the exam:

Station 1: Respiratory System, Abdominal System  
Station 2: History Taking Skills  
Station 3: Cardiovascular System, Nervous System  
Station 4: Communication Skills and Ethics  
Station 5: Skin, Locomotor System, Eyes, Endocrine

Uses a practical, user-friendly, case-based format Each system in Stations 1,3 and 5 starts with a detailed examination scheme followed by a unique Recognition-Interpretation-Discussion format for each case. This has been carefully designed to make preparing for PACES efficient and maximise marks on the day of the exam. Stations 2 and 4 both start with introductions to the history taking and communication skills tested in the exam. Cases then follow, each comprising boxed history taking or communication skills/ethics points relating to the case followed by questions and answers The book is an up to date, detailed medical text for PACES candidates,

striking the balance between the need to be concise and the needs to carefully explain concepts which candidates find difficult. Suitable as a 'ward adjunct' in the months and weeks prior to PACES, and may also be used for quick reference close to the exam Recognises the needs of busy doctors preparing for the exam Suitable for medical students approaching final MB Suitable also for PLAB candidates, FRACP, etc

## **PACES for the MRCP**

Medical students, junior doctors in training, non-neurological specialists and general practitioners will all be faced with patients exhibiting neurological symptoms at some point in their career. This book describes a number of simple approaches to examining patients with common neurological problems seen in both the clinical setting, and in college examinations such as the MRCP here in the UK and the FRACP in Australia. The neurological examination is different from the examination of most other body systems in one important respect - there is no single approach which is appropriate for all cases. This poses a particular problem to the inexperienced clinician - how to tailor their examination to the problem in hand. In this book, the reader will find a sensible and practical approach to what most non-neurologists find daunting, and hints on the most useful things to do when assessing a patient with neurological signs. The second edition will include general updates throughout and completely new chapters on involuntary

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

movements and apraxia. It will be accompanied by a companion CD of video clips illustrating much of what is dealt with in the text, and allowing improved coverage of complex topics such as speech, eye movements and gait.

### **Neurology**

The Membership of the Royal College of Physicians Practical Assessment of Clinical Examination Skills examination (MRCP PACES) is a rigorous assessment of the ability to diagnose and treat a wide variety of conditions. Candidates must have the capacity to recall knowledge immediately - identifying possibilities, narrowing their findings and making a correct analysis. This book offers an innovative approach to revision for candidates. It clearly presents a wide variety of conditions in pictorial format, prompting recall with both visual and verbal mnemonics. Each colour page offers a different condition and outlines only the details essential to diagnosis and treatment; a concise, refreshing approach to tackling the vast number of topics required

### **PACES for the MRCP**

This brief, accessible book covers all aspects of transient global amnesia (TGA). First, it deals with the history of TGA before moving on to clinical and diagnostic

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

features, and differential diagnosis. The investigation and management of TGA is then discussed, followed by treatment and prognosis. Each of the chapters is devoted to a practical and structured overview of the particular topic, with use of case studies to illustrate the material. Based in part on the author's experience of TGA cases over 15 years and in part on a review of the published literature, this book will hopefully enlighten clinicians from a broad range of medical backgrounds on the clinical features, investigation, and pathogenesis of TGA. Transient Global Amnesia is aimed at any clinician with an interest in, or who encounters patients with, acute amnesia: neurologists, general physicians, old age psychiatrists, geriatricians, clinical neuropsychologists, and primary care physicians, as well as other professions allied to medicine with similar interests, such as members of memory assessment teams.

### **Neurology in Tropics (e-Book)**

### **MRCP 2**

Neurology has a reputation as a difficult area in the MRCP examinations, with the clinical neurology stations (PACES and traditional short cases) being especially feared by candidates. This book aims to demystify the subject, and help candidates

avoid becoming bogged down in unnecessary detail and to clarify their thoughts and expression. The book is divided into three major sections covering areas of the body, each organised according to the possible instructions that candidates are likely to encounter in the exam. They include summaries of essential examination steps to be undertaken, possible clinical findings, brief discussions in question and answer format, and tips and pitfalls. Concise, clear and engaging, this is an essential aid for candidates preparing for the MRCP clinical neurology stations.

## **The Black Book of Clinical Examination**

Pregnancy complicated by neurological disorders is a challenging area for both obstetricians and neurologists. Treatment of the maternal condition often needs to be adjusted because of concerns for the fetus, and some conditions have a major impact on the method, mode, and timing of delivery. Many of the clinical problems that arise in pregnant women with a neurological disease have not been the subject of clinical trials, so management must often be based on what published evidence is available and a good understanding of the likely interactions between the condition and pregnancy and vice versa. The editors and contributors represent a team with considerable experience in this area. They offer their "best practice" advice as how to treat the mother effectively, ensuring fetal safety, as well as embracing a philosophy that the pregnancy of a woman with a neurological disease should be made as enjoyable and rewarding for her as is possible.

## **The MRCP PACES Handbook**

The forerunner to this book - Ryder, Mir & Freeman's 'An Aid to the MRCP Short Cases' - rapidly established itself as a classic and has sold over 30,000 copies. The new Progressive Assessment of Clinical Examination Skills (PACES) has replaced the old short case exam and, as a result, the authors have revised, reworked and extended their highly successful text so that it continues to address the study needs of candidates. This new revision aid is now presented in two volumes: An Aid to the MRCP PACES Volume 1: Stations 1, 3 and 5 An Aid to the MRCP PACES Volume 2: Stations 2 and 4 This Volume covers Station 1 'Respiratory and Abdominal Systems', Station 3 'Cardiovascular and Neurological Systems' and Station 5 'Skin, Locomotor, Eyes and the Endocrine System'. The 200 cases have been written in accordance with the new examining and marking schemes used for the exam. They provide an invaluable training and revision aid for all candidates.

## **Essential Revision Notes in Clinical Neurology**

This monograph translates neuroscientific research to illuminate ongoing and future practices for the rehabilitation of patients with neurologic diseases. The author dissects fundamental concepts, current practices, and clinical trials to define what clinicians and researchers need to consider as they pursue best

practices and areas ripe for exploration. Remarkable studies from functional anatomy, neural repair, physiologic imaging of the brain, and brain-machine interfaces reveal how the structure and function of the nervous system may respond to therapeutic manipulations for walking, grasping, and cognition. These concepts are brought forward into treating the medical complications and the impairments and disabilities of patients across neurologic diseases.

## **Neurology for MRCP PACES**

### **Neurology: Self Assessment for Mrcpuk and Mrcpi**

The 3rd edition of PACES for the MRCP has been fully revised and updated throughout to retain its pole position as the textbook to accompany core medical training (CMT) and prepare candidates for success in the Practical Assessment of Clinical Examination Skills and a future specialty career. Features Fully revised for the new Station 5 and completely updated throughout. Promotes understanding and deeper learning of modern medicine applicable to PACES and the specialist registrar. Emphasis on clinical assessment - history-taking, examination and communication skills - equipping candidates with appropriate differential diagnoses from which to develop the right diagnosis. Encourages candidates to

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

question why a diagnosis has arisen and consider its consequences. For example, 'Heart failure' is not a diagnosis until a candidate has considered the differential diagnoses of breathlessness and decided why heart failure is most likely, and then considered its cause (not always ischaemic heart disease), its presentation (acute, chronic, left or right ventricular or both) and, most importantly, the effects of it and its treatments on a patient's life. This 3rd edition of PACES for the MRCP continues to provide fully revised, up-to-date, evidence-based coverage of investigations and treatments. Whilst the emphasis of PACES is on clinical skills, candidates who understand when, for example, a patient with rheumatoid arthritis might benefit from a biologic agent and how this will influence inflammatory disease, is better equipped for success. From reviews of the previous edition: 'Hall's PACES for the MRCP is excellent. It is easy to follow, carefully laid out and covers all conditions likely to appear in each station of the exam. The author not only explains examination techniques and clinical signs, but also goes that step further to ensure the reader really understands each topic, using clinical examples, question and answer/discussion sections as well as detailed illustrations. Where this text also outshines the others is with the inclusion of chapters covering the History Taking and Communication/Ethics stations of the exam. The scenarios are "spot on" and give the reader plenty of examples to work through. The Neurology section is brilliant.' Overall: An excellent and up-to-date text, this is the new MRCP "Bible" - don't sit your exam without it. 'Looking through the book is a visual delight and there is lots of excellent information there.' 'Well laid out, easy to read and utterly

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

relevant. Also serves as a useful reference tool post-membership too. Buy it!' Really good book. The clinical stations are well covered - in particular this book is worth buying just for the neuro section alone which is really easy to read and understand and gives you a great framework for approaching clinical cases (this is also what countless colleagues of mine have cited as the book's main selling point!) 'This is an excellent book. It is very well-written, clear, factually correct and actually means that you know enough to hold a conversation with the examiners. Apparently most people assume they will pass the Hx and comm stations but commonly fail them and this book is excellent for those with lots of information and cases to practice. I really feel that this book has transformed the paces market as it is so much better than the others.' 'Hall's refreshingly relevant and readable textbook is vital to successful PACES preparation and covers all sections faced in the exam with good detail.' A one-volume text giving candidates complete preparation for the PACES exam within one portable volume 250 cases organised into the 5 stations of the PACES exam - respiratory and abdominal system, history taking, cardiovascular and nervous system, communication and ethics and skin, locomotion, eyes and endocrine systems Engaging question-and-answer approach at the end of each case - excellent preparation for the exam Boxed tips highlight vital information - helps identify what is most important to remember Fully revised for the new Station 5 and completely updated throughout.

## **Neurology and Clinical Neuroanatomy on the Move**

Examination Paediatrics is an essential guide for medical trainees undertaking paediatric clinical examinations. Aligned with current practice and examination format, this new edition provides guidance on history taking, examination procedure, relevant investigations, and management for the majority of chronic paediatric clinical problems encountered in paediatric hospital practice and community paediatric practice. Extended cardiology focus with over 50 colour images Catchy mnemonics to aid recall 5 new long cases, including hypopituitarism, neurofibromatosis type 1 and Rett syndrome 8 new short cases, including lymphadenopathy, ataxia and nystagmus Tips on body language, attitude and the motivation needed to pass your clinical exams

## **An Aid to the MRCP PACES**

MRCP PACES is a challenging examination requiring in-depth clinical knowledge, excellent clinical skills and the ability to present each case concisely and coherently. This revision guide helps candidates achieve these aims; it is compact enough for bedside use and sufficiently comprehensive for self-study. The new edition follows the structure of the current PACES exam and has an expanded section on Station 5. As well as a wealth of up-to-date questions for practice, it includes extensive new clinical information on new therapies and details of the latest investigations and management options. Each chapter has been reviewed by

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

senior clinicians within the specialty. • Presents all seven stations in one book • Provides practical hints and tips for success at each station • Presents much more comprehensive information in a compact and accessible format than other books • Provides evidence-based information, guidelines and questions mapping onto the latest examination format. This book teaches the candidate not only how to pass the PACES exam, leading the reader through each case and exactly what is expected of them, but also provides a succinct yet detailed clinical handbook for support on medical wards.

### **Neurological Differential Diagnosis**

Cases for PACES provides a concise study aid to Part II of the MRCP examination; the Practical Assessment of Clinical Examination Skills or PACES. The new edition of this very popular study guide has been completely updated, and now includes scenarios for Station 5, introduced in October 2009. Featuring a 'case study' format that matches the style of the exam, it includes all the essential information - perfect for on-the-ward revision and study. Written by authors who remember their own PACES examination, their experience in learning and teaching PACES is condensed to provide exactly what you need to know to pass. With its informal style, Cases for PACES is also ideal for self-directed learning in groups, and will help you hone your clinical skills and boost your confidence in the run-up to the examination. For more titles to help you prepare for MRCP examinations go

toahref="http://www.wileymedicalstudent.com/"www.wileymedicaleducation.com/a

## **Cases for PACES**

This brand-new revision aid has been designed specifically to help medical students and early post-graduate doctors learn and remember pertinent information about various neurological conditions through pictorial representation, and will be invaluable throughout medical studies and particularly useful in the pressured run-up to final and post-graduate examinations. The highly-structured information is presented in a consistent, double-page format. Each condition is represented by a characterful and memorable visual mnemonic, accompanied by a concise, high-yield review covering definition, aetiology, epidemiology, presentation, investigation, management, complications and prognosis. Over 40 common conditions are included, organized alphabetically for ease of reference. Neurology is often viewed as a challenging subject to learn. By utilising visual imagery to aid memory and recall of important information, the author brings a refreshing new approach to knowledge consolidation.

## **Case Presentations in Neurology**

Neurology is an exciting and evolving clinical science. The fact that many

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

previously untreatable diseases are now known to be not only treatable, but preventable, has raised new optimism for the probability that treatments will emerge for other currently incurable neurologic disorders. This book is written and illustrated for students of clinical neurology, neurologists-in-training, and practicing neurologists, who need ready access to a comprehensive, up-to-date, and evidence-based guide to the understanding, diagnosis, and management of common and important neurologic disorders. The book includes more than 800 illustrations, many of which are images taken from the authors' own practice.

### **Essential Lists of Differential Diagnoses for MRCP**

Medicine for MRCP provides a comprehensive review of the material that you need to pass the MRCP Parts 1 and 2 written papers. The twenty-seven chapters mapped out to the RCP syllabus, cover all areas from molecular medicine and genetics, through to medical law and ethics. Written by specialist contributors and educational experts, the content is carefully crafted to build your understanding for both papers. Each chapter begins with the basic science required for Part 1, before covering clinical medicine for Part 1, Part 2 and the PACES examinations. To ensure effective revision, material is presented in short sections with bullet lists, tables, and boxes. Over 150 drawings and photos illustrate key principles and clinical topics making them easier to retain. References to evidence-based protocols and directions to further reading allow for deeper understanding. Candidates can

## Read Book Neurology For Mrcp Paces Author Hani T S Benamer Published On July 2010

review their progress via the 180 end-of chapter self-assessment questions. Drawing on the authors' expertise, Medicine for MRCP is the ideal companion for the MRCP as well as a useful reference guide for practicing medical doctors.

### **An Aid to the MRCP PACES**

A book of 75 cases which mimic the style and approach of the MRCP PACES exam. The book will equip the candidate attempting the MRCP PACES examination, but will also provide an overview of evidence-based medicine for competency-based training.

### **Neurology for Mrcp**

Case Presentations in Neurology presents a selection of case histories demonstrating how patients with often quite simple problems may present and to bring out aspects of their diagnosis and management. All the patients presented to the Department of Neurology including those with more obscure diagnoses. The book consists of 12 exercises, each of six cases broadly corresponding to the style of the MRCP (UK) written case history papers. Each case is set out with the history and physical findings given first. There follows either a series of questions or true/false statements on one side of the page which the reader should attempt

before continuing on to the answer section on the other side. There then follows a short discussion about each case and a single reference. This book is intended for those doctors studying for higher professional qualifications such as the MRCP, although it may be of interest and use to medical students approaching their final examinations.

## **Neurology Ophthalmology and Psychiatry**

The forerunner to this book - Ryder, Mir & Freeman's 'An Aid to the MRCP Short Cases' - rapidly established itself as a classic and has sold over 30,000 copies. The new Progressive Assessment of Clinical Examination Skills (PACES) has replaced the old short case exam and, as a result, the authors have revised, reworked and extended their highly successful text so that it continues to address the study needs of candidates. This new revision aid is now presented in two volumes: An Aid to the MRCP PACES Volume 1: Stations 1, 3 and 5 An Aid to the MRCP PACES Volume 2: Stations 2 and 4 This Volume covers Station 1 'Respiratory and Abdominal Systems', Station 3 'Cardiovascular and Neurological Systems' and Station 5 'Skin, Locomoter, Eyes and the Endocrine System'. The 200 cases have been written in accordance with the new examining and marking schemes used for the exam. They provide an invaluable training and revision aid for all candidates.

## **Clinical Neurology**

The MRCP (PACES) is a challenging examination as it requires both in-depth knowledge and the ability to present the selected case concisely and coherently. This essential revision aid is designed to help candidates achieve both aims whilst simultaneously being compact enough for ward use, and comprehensive enough for self-study. The book incorporates the new Station 5 (brief clinical encounters), clinical information on the increasingly widespread use of biological therapies, a bank of clinical pictures, details of the latest investigations and management options, and questions reflecting both the standard and detail required for the exam and the new MRCP PACES marking structure. Each chapter has been reviewed by consultants within the specialty, many of whom are Royal College examiners. The cases, which mirror those most frequently encountered in the examination, are all set out in a standardised format, and include hints and tips as well as a summary of consolidated key learning points. Each case contains a section on presentation which will aid the candidate in perfecting this skill. Although most appropriate for MRCP (PACES) examination candidates, the book's clear structure and balance of detail and clarity make it useful reading for medical students and trainee physicians. It will also be an excellent resource for clinicians involved in teaching students and doctors. The style is succinct, not minimalist but sufficient. The presentation is fresh and logical. The authors have done an outstanding job in introducing the setting for the PACES examination and the
