Central Asia has emerged as potentially the most important new hydrocarbon province in decades. Among the countries whose natural resources are now the focus of world attention, Kazakhstan is very much in the front rank. The scale and strategic importance of its reserves mean that it is set to become one of the key players in the global market. Realising that potential depends on many factors, not least its legal treatment of the oil and gas industry. The contributors to this volume consider the various dimensions of that legal treatment, including investment and contractual issues, dispute settlement, transport and refining, environmental issues, and taxation. The importance of the international context for Kazakhstan's domestic law is a key feature of this book, as is a concern with identifying existing problems and suggesting the most fruitful direction for reform. The book will be of interest to practitioners and academics working in the specific field as well as in the more general area of legal relations between the oil and gas industry and transition economies. Ilias Bantekas is Reader in Law at the University of Westminster, London, UK. He has written widely in the field of international law and won

the International Committee of the Red Cross Paul Reuter prize in 2000. Visiting Fellow at Harvard Law School (2003-04). John Paterson is Reader in Law at the University of Westminster, London, UK. He has written on the regulation of the oil and gas industry and acts as a consultant to the OECD Nuclear Energy Agency. Maidan Suleimenov is Professor of Law at the Kazakh State Academy of Law and Adilet Higher Law School, Almaty, Kazakhstan. He was directly involved in Kazakhstan's accession to the Energy Charter Treaty and has also been responsible for legislative drafting in the field.

Joanne Limburg is a woman who thinks things she doesn't want to think, and who does things she doesn't want to do. As a

small child, she would chew her hair all day and lie awake at night wondering if heaven had a ceiling; a few years later, when she should have been doing her homework, she was pacing her bedroom, agonising about the unfairness of life as a woman, and the shortness of her legs. By the time she was an adult, obsessive thoughts and compulsive behaviours had come to dominate her life. She knew that something was wrong with her, but it would take many years before she understood what that something was. The Woman Who Thought Too Much follows Limburg's quest to understand her Obsessive-Compulsive Disorder and to manage her symptoms. She takes the reader on a journey through consulting rooms, libraries and internet sites, as she learns about rumination, scrupulosity, avoidance, thought-action fusion, fixed-action patterns, anal fixations, schemas, basal ganglia, tics and synapses. Meanwhile, she does her best to come to terms with an illness which turns out to be common and even - sometimes - treatable. This vividly honest memoir is a sometimes shocking, often humorous revelation of what it is like to live with so debilitating a condition. It is also an exploration of the inner world of a poet and an intense evocation of the persistence and courage of the human spirit in the face of mental illness.

Property and the Law in Energy and Natural Resources

Oil, an integral part of the contemporary global economy, is considered a driving force behind the 2003 invasion of Iraq. Hydrocarbon reserves in Iraq have a significant role to play in global supply, with oil revenue accounting for more than 90% of Iraqi government income. This book provides a comprehensive insight into the key foundations of Iraq's oil industry and assists in the development of a core area of domestic law to promote economic recovery following years of instability. It

addresses the development of oil legislation and the formation of contracts since the US and allied occupation of Iraq in 2003. Legislation is assessed against the framework of the constitution along with the different types of oil agreements and their terms. The book looks at three main aspects of oil legislation, beginning with the validity and interpretation of the constitution as any subsequent legislation governing oil policy will be based upon this. The work then discusses whether the draft oil and gas law of 2007 and any subsequent oil legislation, including the law implemented by the Kurdish Regional Government in 2007, is valid. Finally, the book analyses the legitimacy of oil agreements entered into by the central and regional governments and whether these contain terms beneficial to the state and contracting party. Providing an in-depth analysis of the origins and development of the legal framework of the oil industry in Iraq, the book acts as both a reference source and a springboard for future research across a range of legal, economic and policy perspectives. It will appeal to practitioners and academics working in energy law and international investment law, as well as policy-makers, legal advisors and those working in governments and energy companies.

The petroleum industry is highly specialised. Over the centuries, it has developed a large number of standard petroleum arrangements and contracts that are not familiar to all across the industry - and even less to the outside world. Each has its own detailed terms and provisions. This new major work uniquely combines an encyclopaedia with commentary for the entire chain of petroleum activities. The second volume deals exclusively with midstream and downstream activities. The topics it covers include energy policies; the relevant players in the sector - from governmental authorities to national oil companies; gas storage; the regulatory and contractual frameworks governing gas and sales agreements; liquefied natural gas; pipelines; distribution networks; refineries; trading and gas stations. The book also discusses concerns and regulations regarding the environment and taxation. This approach enables all those involved in the petroleum industry to master the necessary legal terms in one publication. Both volumes feature chapters by leading experts across the globe in order to provide the best industry practices and standards. The encyclopaedia will serve as a valuable tool for lawyers, industry professionals, consultants, academics, engineers and geologists who are interested in understanding the key legal terms and provisions of the oil and gas industry.

Cases and Materials on Oil and Gas Law

Examining local content law and policy in the oil and gas industry, this book uses Nigeria as a primary case study,

comparing its approach to countries such as Brazil and Norway which have also adopted local content laws in relation to their gas and oil industries. In considering various aspects of local content law and policy as they apply to the oil and gas industry, the book examines the factors behind the formulation of local content policies by petroleum producing states, and the various strategies they have employed to implement them. It analyses arguments against local content requirements from the perspective of international trade and investment law, and from liberal market economic theorists, who argue against its overall usefulness. The book highlights salient aspects of the oil and gas industry such as regulation, national oil companies, treatment of minorities, and policy formulation and implementation.

The principal function of this forms manual is to illustrate the exceptional importance of specific language to all contract-based transactions. Unintended ambiguities or carelessness in wording may result in the loss of properties worth millions of dollars. Additionally, differences in state law, regional custom, the identity and interests of the client, and the peculiarities of the specific transaction require a lawyer to choose carefully which form to use as the basis of the transaction. For this reason, there are often included several forms for the same transaction.
