Peter Pan has enchanted children and the young-at-heart ever since it debuted on the English stage. Like its ageless hero, this is a fantasy that will live forever. Wide-eyed readers will follow Peter and the Darling children to Neverland, that wonderful place ""second to the right and straight on to morning, where they'll meet such unforgettable characters as the jealous fairy Tinkerbell, the evil Captain Hook, Tiger Lily, and the Lost Boys. Also included in this edition is Peter Pan in Kensington Gardens, the touching fairy tale in which Barrie first introduced Peter. Illustrations by the legendary Arthur Rackham and F.D. Bedford. The world's greatest works of literature are now available in these beautiful keepsake volumes. Bound in real cloth, and featuring gilt edges and ribbon markers, these beautifully produced books are a wonderful way to build a handsome library of classic literature. These are the essential novels that belong in every home. They'll transport readers to imaginary worlds and provide excitement, entertainment, and enlightenment for years to come. All of these novels feature attractive illustrations and have an unequalled period feel that will grace the library, the bedside table or bureau.

"Support structures is a manual for what bears, sustains, props and holds up. It is the culminations of many endeavours. The first is the collaborative project "Support Structures" by Céline Condorelli and Gavin Wade from 2003-2009. The second is a critical enquiry by Condorelli that exposes an almost complete absence of literature or theory of what constitutes "support". This book is itself articulated as a supporting structure, a manual for engagement in and with its subject, which attempts both functionally and structurally to operate much like it."--Foreword.

Fibonacci's Liber Abaci

A strong, bitter comedy about women scorned in Minnesota and the really, really nice gangsters—Norwegian hit men—they hire to whack their ex-boyfriends. Olive is a transplant from Texas and Betty is a transplant from Kentucky, but neither of them was prepared for the Norwegian men they would fall in love with there: the practical, warm, thoughtful, destructive, evil, jilting kind. If you're a hit man in Minnesota, 83% of your clients want to take out their ex (oofda!). Betty has referred Olive to Gus and Tor, a partnership in the whacking business. What Tor doesn't know is that Gus has been sleeping with the clients. What Olive doesn't know is that Gus is Betty's own ex, and she has already put out a hit on him with a Swiss firm. Can Betty call off the job in time to let Gus do his? Should she?

Foundation and Earth

A gripping supernatural mystery and romance set in post-Katrina New Orleans. Rebecca couldn't feel more out of place in New Orleans. She's staying in a creepy house with her aunt, who reads tarot cards. And at the snooty prep school, a pack of filthy-rich girls treat Rebecca like she's invisible. Only gorgeous, unavailable Anton Grey gives Rebecca the time of day, but she wonders if he's got a hidden agenda. Then one night, among the oak trees in Lafayette Cemetery, Rebecca makes a friend. Sweet, mysterious Lisette is eager to show Rebecca the nooks and crannies of New Orleans. There's just one catch. Lisette is a ghost.

This book is a collection of over 200 problems that David Singmaster has composed since 1987. Some of the math problems have appeared in his various puzzle columns for BBC Radio and TV, Canadian Broadcasting, Focus (the UK popular science magazine), Games and Puzzles, the Los Angeles Times, Micromath, the Puzzle a Day memo pad and the Weekend

Telegraph. While some of these are already classics, many of the puzzles have not been published elsewhere previously. Puzzle enthusiasts of all ages will find here arithmetic problems, properties of digits; monetary problems; alpha-metics; Diophantine problems; magic figures; sequence problems; logical problems; geometric problems; physics problems; combinatorial problems; geographic problems; calendar problems; clock problems; dissection problems and verbal problems. Many of the puzzles could be used as warm-up exercises to engender creative atmosphere in a math class. I am sure that many a math teacher will agree with this assessment." Calibre Manual

This edited volume seeks to critically engage with the diversity of feminist and post-colonial theory to counter hegemonic Western knowledge in mainstream community psychology. In doing so, it situates paradigms of thought and representation that capture the lived experiences of those in the global South. Specifically, the book takes an intersectional approach towards its reshaping of community psychology, centering African, black, postcolonial, and decolonial feminist critiques in its 1) critique of existing hegemonic Euro-American community psychology concepts, theories, and practice, 2) proposal of new feminist, indigenous, and decolonial methodological approaches, and 3) real-life examples of engagement, research, dialogue, and reflexive qualitative psychology practice. The book concludes with an agenda for theorization and research for future practice in postcolonial contexts. The volume is relevant to researchers, practitioners, and students in psychology, anthropology, sociology, public health, development studies, social work, urban studies, and women's and gender studies across global contexts.

Problems for Metagrobologists

ARM designs the cores of microcontrollers which equip most "embedded systems" based on 32-bit processors. Cortex M3 is one of these designs, recently developed by ARM with microcontroller applications in mind. To conceive a particularly optimized piece of software (as is often the case in the world of embedded systems) it is often necessary to know how to program in an assembly language. This book explains the basics of programming in an assembly language, while being based on the architecture of Cortex M3 in detail and developing many examples. It is written for people who have never programmed in an assembly language and is thus didactic and progresses step by step by defining the concepts necessary to acquiring a good understanding of these techniques.

Dawn of the White Rose

Office Management in all business and human organization activity is simply the act of getting people together to accomplish desired goals. Office management comprises planning organizing, staffing, leading or directing, and controlling and organization (a group of one or more people or entities), deployment and manipulation of human resources, financial resources, technological resources, and natural resources or effort for the purpose of accomplishing a goal. This present

modest-work has been prepared to provide students a comprehensive coverage of this subject and certain characterstics specific to office management. Every important topic has been covered in a simple and pragmatic language so that students can understand the subject well.

The Definitive Guide to the ARM® Cortex®-M0 and Cortex-M0+ Processors, Second Edition explains the architectures underneath ARM's Cortex-M0 and Cortex-M0+ processors and their programming techniques. Written by ARM's Senior Embedded Technology Manager, Joseph Yiu, the book is packed with examples on how to use the features in the Cortex-M0 and Cortex-M0+ processors. It provides detailed information on the instruction set architecture, how to use a number of popular development suites, an overview of the software development flow, and information on how to locate problems in the program code and software porting. This new edition includes the differences between the Cortex-M0 and Cortex-M0+ processors such as architectural features (e.g. unprivileged execution level, vector table relocation), new chapters on low power designs and the Memory Protection Unit (MPU), the benefits of the Cortex-M0+ processor, such as the new single cycle I/O interface, higher energy efficiency, better performance and the Micro Trace Buffer (MTB) feature, updated software development tools, updated Real Time Operating System examples using KeilTM RTX with CMSIS-RTOS APIs, examples of using various Cortex-M0 and Cortex-M0+ based microcontrollers, and much more. Provides detailed information on ARM® Cortex®-M0 and Cortex-M0+ Processors, including their architectures, programming model, instruction set, and interrupt handling Presents detailed information on the differences between the Cortex-M0 and Cortex-M0+ processors Covers software development flow, including examples for various development tools in both C and assembly languages Includes in-depth coverage of design approaches and considerations for developing ultra low power embedded systems, the benchmark for energy efficiency in microcontrollers, and examples of utilizing low power features in microcontrollers

The Last Word 2

"Ashes of the Sun is fantasy at its finest"--Nicholas Eames, author of Kings of the Wyld Long ago, a magical war destroyed an empire, and a new one was built in its ashes. But still the old grudges simmer, and two siblings will fight on opposite sides to save their world in the start of Django Wexler's new epic fantasy trilogy. Gyre hasn't seen his beloved sister since their parents sold her to the mysterious Twilight Order. Now, twelve years after her disappearance, Gyre's sole focus is revenge, and he's willing to risk anything and anyone to claim enough power to destroy the Order. Chasing rumors of a fabled city protecting a powerful artifact, Gyre comes face-to-face with his lost sister. But she isn't who she once was. Trained to be a warrior, Maya wields magic for the Twilight Order's cause. Standing on opposite sides of a looming civil war,

the two siblings will learn that not even the ties of blood will keep them from splitting the world in two.

We are living in a world full of innovations for the elderly and people with special needs to use smart assistive technologies and smart homes to more easily perform activities of daily living, to continue in social participation, to engage in entertainment and leisure activities, and to enjoy living independently. These innovations are inspired by new technologies leveraging all aspects of ambient and pervasive intel- gence with related theories, technologies, methods, applications, and services on ub- uitous, pervasive, AmI, universal, mobile, embedded, wearable, augmented, invisible, hidden, context-aware, calm, amorphous, sentient, proactive, post–PC, everyday, autonomic computing from the engineering, business and organizational perspectives. In the field of smart homes and health telematics, significant research is underway to enable aging and disabled people to use smart assistive technologies and smart homes to foster independent living and to offer them an enhanced quality of life. A smart home is a vision of the future where computers and computing devices will be available naturally and unobtrusively anywhere, anytime, and by different means in our daily living, working, learning, business, and infotainment environments. Such a vision opens tremendous opportunities for numerous novel

services/applications that are more immersive, more intelligent, and more interactive in both real and cyber spaces.

Archaeological Networks and Social Interaction focuses on conceptualisations of human interaction, human-thing entanglement, material affordances and agency. Network concepts in the archaeological discipline are ubiquitous these days. They range from loose concepts, used as metaphors to address a notion of connectivity, to highly formal and mathematically complex predictions of human behaviour. These different networked worlds sometimes clash and rarely converge. Archaeologists interested in network analysis, however, have achieved a much better understanding of the implications of adopting formal methods for studying social interaction and there have been theoretical advancements realising a better synergy between different theoretical perspectives. These nascent concerns are explored further in this volume with regional specialists exploring case studies from Prehistory to the Middle Ages throughout the Ancient and New Worlds, outlining how formal network approaches contribute to studying social interaction archaeologically. This book will be of interest to archaeologists wishing to access the latest research on networks and interconnectivity and how these approaches have been productively modified to archaeological research.

Go beyond gamification's badges and leaderboards with the new edition of the book, first published in 2011, that helped transform education. Going far beyond the first edition of The Multiplayer Classroom, forthrightly examining what worked and what didn't over years of development, here are the tools to design any structured learning experience as a game to engage your students, raise their grades, and ensure their attendance. Suitable for use in the classroom or the boardroom, this book features a reader-friendly style that introduces game concepts and vocabulary in a logical way. Also included are case studies, both past and present, from others teaching in their own multiplayer classrooms around the world. You don't need any experience making games or even playing games to use this book. You don't even need a computer. Yet, you will join many hundreds of educators who have learned how to create multiplayer games for any age on any subject. Lee Sheldon began his writing career in television as a writer-producer, eventually writing more than 200 shows ranging from Charlie's Angels (writer) to Edge of Night (head writer) to Star Trek: The Next Generation (writer-producer). Having written and designed more than 40 commercial and applied video games, Lee spearheaded the first full writing for games concentration in North America at Rensselaer Polytechnic Institute and the second writing concentration at Worcester Polytechnic Institute, where he is now a professor of practice. Lee is a regular lecturer and consultant on game design and writing in the United States and abroad. His most recent commercial game, the award-winning The Lion's Song, is currently on Steam.

Peter Pan

In this smart, relevant, unputdownable psychological thriller, a woman cop is on the hunt for a killer while battling violent secrets of her own. "My name is Nina Karim. I am a single thirty-one-year-old woman who likes cats, Ryan Reynolds movies, beautiful sunsets, walking on a wintry beach holding hands with a tall, caring, lightly bearded third-wave feminist. Yeah, right." Nina is a tough Queens detective with a series of cold case homicides on her desk – men whose widows had the same alibi: they were living in Artemis, a battered women's shelter, when their husbands were killed. Nina goes undercover into Artemis. Though she is playing the victim, she's anything but. Nina knows about violence and the bullies who rely on it because she's experienced it in her own life. In this heart-pounding thriller Nina confronts the violence of her own past in Artemis where she finds solidarity with a community of women who deal with abusive and lethal men in their own way. For the women living in Artemis there is no absolute moral compass, there is the law and there is survival. And, for Nina, who became a cop so she could find the man who murdered her father, there is only revenge.

Paediatric Rheumatology is an indispensible resource for the identification and management of specific rheumatological disorders. As well as covering common and rare rheumatological problems, there are also chapters on investigations and emergencies, designed for quick reference. The handbook includes dedicated topics on systemic diseases affecting rheumatology; the relevant clinical guidelines and information needed for a rheumatologist to successfully management a young patient; and, a coloured section for guidance on rash-related investigations. Paediatric Rheumatology is also fully endorsed by the British Society for Paediatric and Adolescent Rheumatology and the UK Paediatric Rheumatology Clinical Studies Group.

The fifth novel in Isaac Asimov's classic science-fiction masterpiece, the Foundation series Golan Trevize, former Councilman of the First Foundation, has chosen the future, and it is Gaia. A superorganism, Gaia is a holistic planet with a common consciousness so intensely united that every dewdrop, every pebble, every being, can speak for all--and feel for all. It is a realm in which privacy is not only undesirable, it is incomprehensible. But is it the right choice for the destiny of mankind? While Trevize feels it is, that is not enough. He must know. Trevize believes the answer lies at the site of humanity's roots: fabled Earth . . . if it still exists. For no one is sure where the planet of Gaia's first settlers is to be found in the immense wilderness of the Galaxy. Nor can anyone explain why no record of Earth has been preserved, no mention of it made anywhere in Gaia's vast world-memory. It is an enigma Trevize is determined to resolve, and a quest he is determined to undertake, at any cost.

Features inexpensive ARM® Cortex®-M4 microcontroller development systems available from Texas Instruments and STMicroelectronics. This book presents a hands-on approach to teaching Digital Signal Processing (DSP) with real-time examples using the ARM® Cortex®-M4 32-bit microprocessor. Real-time examples using analog input and output signals are provided, giving visible (using an oscilloscope) and audible (using a speaker or headphones) results. Signal generators and/or audio sources, e.g. iPods, can be used to provide experimental input signals. The text also covers the fundamental concepts of digital signal processing such as analog-to-digital and digital-to-analog conversion, FIR and IIR filtering, Fourier transforms, and adaptive filtering. Digital Signal Processing Using the ARM® Cortex®-M4: Uses a large number of simple example programs illustrating DSP concepts in real-time, in an electrical engineering laboratory setting Includes examples for both STM32F407 Discovery and the TM4C123 Launchpad, using Keil MDK-ARM, on a companion website Example programs for the TM4C123 Launchpad using Code Composer Studio version 6 available on companion website Digital Signal Processing Using the ARM® Cortex®-M4 serves as a teaching aid for university professors wishing to teach DSP using laboratory experiments, and for students or engineers wishing to study DSP using the inexpensive ARM® Cortex®-M4.
