Porsche 911 Performance Handbook

The previously untold story of the Zenith Trans-Oceanic, the world's most romantic and expensive series of portable radios. Long a companion of kings, presidents, transoceanic yachtsmen and world explorers, the Trans-Oceanic was also carried into battle by American troops in three wars. Its great popularity in spite of a very high price can be laid at the feet of several generations of armchair travelers who used the shortwave capabilities of the Trans-Oceanic as a window on the world. With access to the Zenith corporate archives and their long experience as radio enthusiasts and writers for both the popular and scholarly press, Professors Bryant and Cones present the engrossing stories of the development and use of the Trans-Oceanic throughout its forty year life. They present a wealth of never-before published photographs, documents and information concerning these fascinating radios, their collection, preservation and restoration.

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation

process. Ming, James E. Goddard Space Flight Center

The power of the Oedipus legend is apparent not only in its interpretations but even more so in its variations. As Edmunds writes, "Translations, adaptations, and performances still come forth in a never-ending stream. Again and again, playwrights have tried their hand at new shapings of the Sophoclean Oedipuses and often a country's Oedipus forms a whole chapter in the history of its literature." Drawing on more than seventy works that dispersed the Oedipus legend from Greece to Asia, Africa, and the Americas, Edmunds provides a foundation for discussion of the lasting appeal of this legend, for claims of its universality, and for its uses as a vehicle for personal and cultural expression.

With more than 300, 000 built, the Triumph Spitfire is the bestselling Triumph sports car model ever produced. As the values of these cars have risen significantly in recent years, interest in these affordable sports cars has also

increased. This concise but comprehensive book is therefore the ideal guide for those who want to read about the history and development of these iconic sports cars. Introduced at the London Motor Show in 1962, the Triumph Spitfire was designed to compete in the small sports car market against models such as the Austin-Healey Sprite. Based on an adapted Triumph Herald chassis, the Triumph Spitfire's swooping lines were designed by Italian designer Giovanni Michelotti. In this highly readable book, John Nikas describes all the technical and design developments that took the Triumph Spitfire through five separate models, from the Triumph Spitfire 4 (Mark 1) to the Triumph Spitfire 1500. The book also covers the competition models.

Riley

A trace element (TE) is a chemical element presented below ~0.1 wt. % and required in minute quantities to maintain proper physical functioning. TE analysis in clinical samples (plasma, urine, cerebro-spinal fluid, full-term placenta, hair, nails, buccal mucosa, semen, biopsy specimens) has received increasing attention. Based on 62 sources, current effort presents comparative knowledge about the attempts to accurately trace TE in clinical samples through Vis/NIR, PIXE, TXRF, GFAAS, ICP-MS. It informs the need for further research adjustments to reveal the reciprocal states of certain TE (Cu/Zn, Ca/Mg, Fe/ Pb) in correlation with their real-time counts in both maternal and neonatal umbilical cord plasma, and in relation to augmented oxidative stress. This would help to achieve consistency in interpreting obstetrical complications (preeclampsia, prematurity, or gestational diabetes). Generated hypotheses should target plausible mechanisms behind TE alterations and their stage-sensitive measures in gynecological cancer. New prospects are discussed in management and prognosis of endometriosis and premature ovarian failure (POF).
