You want the best for your kids, but resources are limited and you're overloaded with information. From the moment your kids are born, the kiddie-perfecting complex is pushing you to buy-buy-buy. And playtime is no different. You feel pressured to sign the kids up for an ever-escalating array of classes and clinics, send them to the right sleep-away or math enrichment camp, soccer clinic, ballet, art, and music classes—or else they're doomed to fail. Right? Not so fast. Lifestyle guru Rosalyn Hoffman knows that kids need balance: time to be bored and find their own inner resources, time to ride their bikes and shoot hoops, time to experience the joy of free play. And when it's time to sign them up for organized activities, Hoffman offers sane guidance for navigating the world of lessons and programs, explaining how to get them in everything from art classes to music lessons to sports to camp—without breaking the bank.

The Smart Investor's Survival Guide

For today's shell-shocked individual investors, financial expert Charles B. Carlson offers hands-on advice on how to survive — and thrive — in a wildly fluctuating market. The economic recession of the past year, followed by the tragedy of September 11, sent a ripple of panic through investors in 2001. The market shed trillions of dollars in wealth, and hundreds of thousands of individual investors suffered substantial financial losses. The volatility we experienced last year was more than a fluke, argues investment expert Charles B. Carlson. With the ongoing changes in the economy, including changes in corporate reporting laws, instant availability of financial information, and the ability to buy and sell stocks with the touch of a keystroke, volatility is here to stay. But volatility isn't necessarily a bad thing. In fact, Carlson argues, if you know how to weather today stormy markets, investing in them can be very profitable. In *The Smart Investor's Survival Guide*, Carlson shows investors how to make volatility work to their advantage. First, he argues, it is critical that investors match their investment style — growth, value, buy and hold — to the kinds of stocks they pick. For long-term investors, Carlson recommends that a portion of their portfolio be invested in what he calls the calm eye of the storm, "easy hold" stocks that have consistent, steady growth, and very low volatility. Even in the terrible market downturn of 2000, when the Nasdaq lost 39 percent of its value and stocks like Lucent and Cisco saw their share price drop by 80 percent or more, a number of investment

sectors actually gained in value. The Dow Jones index, minus its technology stocks, broke even. In other words, even in the worst markets, not every stock or sector goes down. Through what he calls the nine essential laws of successful investing in a volatile market, Carlson reveals:

- How to diversify the portfolios across stock sectors and investment vehicles
- The critical importance of matching one's investment style — value, growth, buy and hold — to the kinds of stocks one invests in
- The importance of “easy hold” — no-brainer stocks — in a portfolio, stocks that will grow 10 to 12 percent a year with minimal volatility.

Written by one of the most trusted names in the financial community, *The Smart Investor's Survival Guide* shows investors how to master today's turbulent markets, and profit from them.

The Organized Teacher's Guide to Classroom Management, Grades K-8, Second Edition

Who benefits from smart technology? Whose interests are served when we trade our personal data for convenience and connectivity? Smart technology is everywhere: smart umbrellas that light up when rain is in the forecast; smart cars that relieve drivers of the drudgery of driving; smart toothbrushes that send your dental hygiene details to the cloud. Nothing is safe from smartification. In *Too Smart*, Jathan Sadowski looks at the proliferation of smart stuff in our lives and asks whether the tradeoff—exchanging our personal data for convenience and connectivity—is worth it. Who benefits from smart technology? Sadowski explains how data, once the purview of researchers and policy wonks, has become a form of capital. Smart technology, he argues, is driven by the dual imperatives of digital capitalism: extracting data from, and expanding control over, everything and everybody. He looks at three domains colonized by smart technologies' collection and control systems: the smart self, the smart home, and the smart city. The smart self involves more than self-tracking of steps walked and calories burned; it raises questions about what others do with our data and how they direct our behavior—whether or not we want them to. The smart home collects data about our habits that offer business a window into our

domestic spaces. And the smart city, where these systems have space to grow, offers military-grade surveillance capabilities to local authorities.

Technology gets smart from our data. We may enjoy the conveniences we get in return (the refrigerator says we're out of milk!), but, Sadowski argues, smart technology advances the interests of corporate technocratic power—and will continue to do so unless we demand oversight and ownership of our data.

The Smart Woman's Guide to Plastic Surgery, Updated Second Edition

For generations, it has been an axiom that the purchase of a home is the greatest single investment the average person makes. The corollary has always been that if you take good care of that home it will inevitably be a good investment, permitting you to sell your home at a profit or allowing you to take out a large loan on the equity you've built up. While the axiom is still true, the corollary is no longer true. Many Americans have lost their homes due to the Great Recession and still more owe more on their homes than the homes are worth. People once made a lot of money on flipping homes; now many wonder if they should buy homes at all. There are unmistakable signs that we are headed into an even worse

recession, making any housing decisions more important than ever. An acknowledged expert, Dr. Carol Roskey has spent a lifetime in studying all aspects of the housing field from financing to the best kinds of insulation. With her help, you can make well informed decisions.
