Known for accuracy, precision, and rigor, Soo Tan now brings those same qualities to the Calculus course. With his clear, concise writing style, and use of relevant, real world examples, Tan introduces abstract mathematical concepts with his intuitive approach that captures student interest without compromising mathematical rigor. In keeping with this emphasis on conceptual understanding, each exercise set begins with concept questions and each end-of-chapter review section includes fill-in-the-blank questions which help students master the definitions and theorems in each chapter. Additionally, many questions asking for the interpretation of graphical, numerical, and algebraic results are included among both the examples and the exercise sets. Elizabeth Sears here combines rich visual material and textual evidence to reveal the sophistication, warmth, and humor of medieval speculations about the ages of man. Medieval artists illustrated this theme, establishing the convention that each of life's phases in turn was to be represented by the figure of a man (or, rarely, a woman) who revealed his age through size, posture, gesture, and attribute. But in selecting the number of ages to be depicted--three, four, five, six, seven, ten, or twelve--and in determining the contexts in which the cycles should appear, painters and sculptors were heirs to longstanding intellectual traditions. Ideas promulgated by ancient and medieval natural historians, physicians, and astrologers, and by biblical exegetes and popular moralists, receive detailed treatment in this wide-ranging study. Professor Sears traces the diffusion of well-established schemes of age division from the seclusion of the early medieval schools into

wider circles in the later Middle Ages and examines the increasing use of the theme as a structure of edifying discourse, both in art and literature. Elizabeth Sears is Assistant Professor of Art History at Princeton University. Originally published in 1986. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. The Ages of Man

This is a collection of interdisciplinary essays that examines the historical, political, and social significance of 9/11. This collection considers 9/11 as an event situated within the much larger historical context of late late-capitalism, a paradoxical time in which American and capitalist hegemony exist as

pervasive and yet under precarious circumstances. Contributors to this collection examine the ways in which 9/11 changed both everything and, at the same time, nothing at all. They likewise examine the implications of 9/11 through a variety of different media and art forms including literature, film, television, and street art.

Everyday Things in Archaic Greece

A gorgeous work of literary journalism that follows a nomadic family's fraught migration to the high Himalayan plains, as a changing world closes in around them. Following his vivid account of traveling with one of the last camel caravans on earth in *Men of Salt*, Michael Benanav now brings us along on a journey with a tribe of forest-dwelling nomads in India. Welcomed into a family of nomadic water buffalo herders, he joins them on their annual spring migration into the Himalayas. More than a glimpse into an endangered culture, this superb adventure explores the relationship between humankind and wild lands, and the dubious effect of environmental conservation on peoples whose lives are inseparably intertwined with the natural world. The migration Benanav embarked upon was plagued with problems, as government officials threatened to ban this nomadic family—and others in the Van Gujjar tribe—from the high alpine meadows where they had summered for centuries. Faced with the possibility that their beloved buffaloes would starve to death, and that their age-old way of life was doomed, the family charted a risky new course, which would culminating in an astonishing mountain rescue. And Benanav was arrested for documenting the story of their plight. Intimate and enthralling, *Himalaya Bound* paints a sublime picture of a rarely-seen world, revealing the hopes and fears, hardships and joys, of a people who wonder if there is still a place for them

on this planet. Laced with stories of tribal cultures from India to Yellowstone, from Jordan to Kenya, Benanav deftly wends through the controversial terrain where Western ways of protecting the environment clash with indigenous understandings of nature. Himalaya Bound celebrates and mourns an ancient way of life, while revealing an unlikely battleground in the fight to save the earth.

A masterpiece ahead of its time, a prescient rendering of a dark future, and the inspiration for the blockbuster film *Blade Runner* By 2021, the World War has killed millions, driving entire species into extinction and sending mankind off-planet. Those who remain covet any living creature, and for people who can't afford one, companies built incredibly realistic simulacra: horses, birds, cats, sheep. They've even built humans. Immigrants to Mars receive androids so sophisticated they are indistinguishable from true men or women. Fearful of the havoc these artificial humans can wreak, the government bans them from Earth. Driven into hiding, unauthorized androids live among human beings, undetected. Rick Deckard, an officially sanctioned bounty hunter, is commissioned to find rogue androids and "retire" them. But when cornered, androids fight back—with lethal force. Praise for Philip K. Terror in Global Narrative

The Zero is a groundbreaking novel, a darkly comic snapshot of our times that is already being compared to the works of Franz Kafka and Joseph Heller. From its opening pages—when hero cop Brian Remy wakes up to find he's shot himself in the head—novelist Jess Walter takes us on a harrowing tour of a city and a country shuddering through the aftershocks of a devastating terrorist attack. As the smoke slowly clears, Remy finds that his memory is skipping, lurching between moments of lucidity and days when he doesn't seem to be living his own life at all. The landscape around him is at once fractured and oddly familiar: a world dominated by a Machiavellian mayor known as "The Boss," and peopled by gawking celebrities, anguished policemen peddling First Responder cereal, and pink real estate divas hyping the spoils of tragedy. Remy himself has a new girlfriend he doesn't know, a son who pretends he's dead, and an unsettling new job chasing a trail of paper scraps for a shadowy intelligence agency known as the Department of Documentation. Whether that trail will lead Remy to an elusive terror cell—or send him circling back to himself—is only one of the questions posed by this provocative yet deeply human novel. From a novelist of astounding talent, The Zero is an extraordinary story of how our trials become our transgressions, of how we forgive ourselves and whether or not we should.

Surviving the Bond Bear Market

The present work provides a platform for leading Data designers whose vision and creativity help us to anticipate major changes occurring in the Data Design field, and pre-empt the future. Each of them strives to provide new answers to the question, “What challenges await Data Design?” To avoid falling into too narrow a mind-set, each works hard to elucidate the breadth of Data Design today and to demonstrate its widespread application across a variety of business sectors. With end users in mind, designer-contributors bring to light the myriad of purposes for which the field was originally intended, forging the bond even further between Data Design and the aims and intentions of those who contribute to it. The first seven parts of the book outline the scope of Data Design, and presents a line-up of “viewpoints” that highlight this discipline’s main topics, and offers an in-depth look into practices boasting both foresight and imagination. The eighth and final part features a series of interviews with Data designers and artists whose methods embody originality and marked singularity. As a result, a number of enlightening concepts and bright ideas unfold within the confines of this book to help dispel the thick fog around this new and still relatively unknown discipline. A plethora of equally eye-opening and edifying new terms, words, and key expressions also unfurl. Informing, influencing, and inspiring are just a few of the buzz words belonging to an initiative that is, first and foremost, a creative one, not to mention the possibility to discern the ever-changing and naturally

complex nature of today's datasphere. Providing an invaluable and cutting-edge resource for design researchers, this work is also intended for students, professionals and practitioners involved in Data Design, Interaction Design, Digital & Media Design, Data & Information Visualization, Computer Science and Engineering.

Wouldn't it be priceless to have a resource that provided you with scripts and patter to solve many problems and unexpected events during hypnosis? Knowing the magic words to use will help you turn any difficulty into an opportunity to really help clients, rather than give up in despair and these patter scripts will make you a better hypnotist. This book goes beyond just a few scripts of patter. This book will actually teach you how to structure hypnosis suggestions, compounding them and making them effective. This is not a script book that gives you start to finish "scriptnosis" scripts to read, but rather teaches you the useful patter to incorporate into your own hypnotherapy sessions; actually helping you to create your own scripts and suggestions.

[From" Dittamondo", by Fazio degli Uberti] Heterojunction interfaces, the interfaces between different semiconducting materials, have been extensively explored for over a quarter of a century. The justification for this effort is clear - these interfaces could become the building blocks of many novel solid-state devices. Other interfaces involving semiconductors are already widely used in technology, These are, for example, metal-semiconductor and insulator-semiconductor junctions and homojunctions. In comparison, the present applications of heterojunction interfaces are limited, but they could potentially become much more extensive in the near future. The path towards the widespread use of heterojunctions is obstructed by several obstacles.

Prices and quantities of both stock and flow variables in an economic system are decisively influenced by their spatial coordinates. Samuelson, but it reached a stage of maturity thanks to the new inroads made by T. Takayama. This book is devoted to spatial economic equilibrium (SPE) analysis and is meant to pay homage to the founding father of modern spatial economic thinking, Professor Takayama. This book witnesses his great talents in clear and rigorous economic thinking regarding an area where for decades many economists have been groping in the dark. Everybody who wants to study the phenomenon of spatial economic equilibrium will necessarily come across Takayama's work, but this necessity is at the same time a great pleasure. Studying his work means a personal scientific enrichment in a field which is still not completely explored. The present volume brings together recent contributions to spatial equilibrium analysis, written by friends and colleagues of Takayama. The structure of the book is based on four main uses of spatial equilibrium models: (i) the imbedding of spatial flows in the economic environment, related to e.g.
