British Columbia Lumberman

"Call me Chick. I've been called Chick since I was six years old. If you call me Donald, I'll know you don't know me. In this story, I'll tell you how my life unfolded over the last eight decades: how I got that nickname; how I met and married the most beautiful girl in the world; and how I came to own and operate S & R sawmills in Surrey, British Columbia. By the end of this book, I'm pretty sure you'll know me well enough to call me Chick." --Chapter One Chick grew up on a chicken farm in Fort Rouge, Manitoba. It was the Great Depression and money was always tight, so he began his entrepreneurial career early, peddling eggs to the neighbours, jockeying for odd jobs and selling magazines. After a move to Vancouver, he set

pins for a bowling alley, baled shavings and made his mill debut at fifteen straightening boards in the Youbou Mill on Vancouver Island. When the opportunity to buy a mill arose, Chick decided to take a chance. It was a good decision. After buying his first mill with Vic Rempel, their quality work earned them steady cuts, and they were able to buy more equipment, install electricity and expand. It wasn't all smooth sailing--Chick had to dive into the Fraser River to rescue a saw, douse a fire, deal with the fallout of the Asian financial crisis and adapt to growing environmental concerns--but S & R survived and thrived, consistently employing a workforce of over five hundred. Chick even came out of the lumber business with all ten fingers. It Can Be Done is also the lively story of Chick's personal life and includes tales of old-fashioned childhood escapades like trick-or-treating for potatoes and relocating neighbours' outhouses, as well as stories of other adventures: a motorcycle road trip ending with a night in jail because all the motels in town were full, and his decision to get a pilot's license after flying in a plane that was literally falling apart into his lap. Chick shares emotional milestones too: meeting his wife in an ice cream shop, family vacations on Gossip Island and, in later years, building Czorny Alzheimer Centre. Told with a great deal of humility and humour, It Can Be Done is the story of an honourable man, well-respected by his peers, and a history of over fifty years of evolution and change in the BC lumber business.

This book gives emphasis to wood fiber raw materials, alternative sources of fibers for paper production, environmental issues, paper quality improvement and cost of paper production. Varieties of non-wood raw materials, including kenaf, rice straw, empty fruit bunches of palm trees, bamboo, bagasse, etc., are considered in this book. The process of fiber treatment also varied to meet paper quality improvement. Different organosolv processes of fiber treatment are discussed. Considering contemporary issues, one particular chapter analyzes the environmentally friendly way of processing non-wood fibers for paper production. The book also contains a chapter on the by-product raw materials of paper production and their profitable applications.

More than just food carts and microbrews, Portland has a story to tell. Its culinary history sings the song of the salmon-people, the pioneers and immigrants, each struggling to make this strange but inviting land between the Pacific and the Cascades feel like home. *Portland: A Food Biography* chronicles the Rose City's rise from a Wild West outpost — a diminutive extension of San Francisco — to the critical darling of the national food scene.

the thousands of natural resources present in the
world, wood is one of the most popular ones. It was
not until the turn of the previous century that the
human dependence on wood was higher than any
other sources of energy. It was considered to be a one
of the wonders of nature that was created to provide
comfort and support to the humanly civilized way of
living. Although there is no historical confirmation
about the first use of wood by humans, still it dates
back to a very long period of time when it was a

Harvest Your Own Lumber

This is a lavishly illustrated history of the Oregon-American Lumber Company, during its heyday one of the most important lumber firms in the Pacific Northwest. Operating from 1922 until its closure in 1957, the company provides an illuminating example of the history of lumbering in the region, showing in detail both the opportunities and problems encountered by firms seeking to exploit the area's rich natural stands of Douglas fir. The story is enhanced by the inclusion of 285 illustrations, most of which are previously unpublished, that depict logging,

railroading, and sawmilling activities, and 17 period-specific maps that give the reader a unique perspective on the growth of the company. The lumbering industry was pivotal to America's settlement and development, reaching its zenith in the period covered by this book, which shows how Oregon-American's survival depended on successfully adapting to great changes in market forces and in industry structures, to natural disasters, and to economic crises like the Great Depression. Essential to the company's objective of supplying lumber to markets in the Midwest farm belt was its relationship with the Great Northern and Northern Pacific Railroads; accordingly, the book provides much information on the railroad networks that made timber extraction possible. The study is based on fifteen years of archival and on-the-ground research and draws heavily on the extensive collection of Oregon-American records, notably the correspondence files of Judd Greenman, the company president who conceived and executed most of the company's operating policies. It also includes, as sidebars, engaging oral histories related by employees, which enrich the text and provide a vivid contrast between management and employee viewpoints.

Once you're familiar with Will Malloff's method of chainsaw lumbermaking, you'll be simply and economically turning trees into lumber on your own. Learn how to select the tree you want, fell it safely, and saw it into a fine pile of building or cabinet lumber. With detailed instructions and over 400 photographs, Will Malloff tells you everything you need to know to turn a chainsaw into a lumbermill, including how to: Modify the chainsaw and make numerous accessories for milling Use the equipment in the woods Grind a smooth-cutting ripping chain Build your own mill from a 2 x 4 and scraps of plywood Cut burls, shape ovals and mill natural knees for boatbuilding Malloff's method is the fruit of over 30 years' experience of felling trees and making lumber. He's logged everything from giant redwoods to desert mesquite and fulfilled his youthful ambition to fell timber in every major forest of North America. Drawing on this experience, he has invented several chainsaw mills, and perfected the easy, efficient method of chainsaw lumbermaking that he describes in this book. If you've ever had trouble finding the lumber you need, or wanted to build something with your own trees, "Chainsaw Lumbermaking" is the book you've been waiting for. Will Malloff has built a variety of mills and is the designer of what many consider the most effective chainsaw lumbermaking

system available. Malloff has spent nearly half a century researching and developing tools and wood technology that minimize ecological impact. In an endeavor to build his own blacksmith shop on a Canadian Pacific island, he invented a state-of-the-art ripping chain, which made chainsaw lumbermaking more feasible and economical than ever before.

This book is the result of over ten years of field research across Zambia. It covers the production and diverse uses of wood and non-wood forest products in different parts of Zambia. Although a short format, it is a multi-contributed work. It starts an overview of the forestry sector, and covers more specific areas like production, markets and trade of wood and non-wood products; the role of non-wood forest products in the livelihood of the local population, the contribution of the forestry sector to Zambia's overall economy and reviews of efforts to strategically utilize these resources for local economic, and sustainable, development. Forestry in Minnesota

This book is primarily a general text covering the whole sweep of the forest industries. The over-riding emphasis is on a clear, simple interpretation of the underlying science, demonstrating how such principles apply to processing operations. The book considers the broad question "what is wood?" by looking at the biology, chemistry and physics of wood structure. Wood quality is examined, and explanations are offered on how and why wood quality varies and the implications for processing. Finally, various "industrial processes" are reviewed and interpreted. All chapters have been written by specialists, but the presentation targets a generalist audience.

forest industry from the perspectives of workers and employers, examining the two institutions that structured the relationship during the Fordist era: the companies and the unions. He relates daily routines of production and profit-making to broader forces of unionism, business ideology, ecological protest, technological change, and corporate concentration. The struggle of the small-business sector to survive in the face of corporate growth, the history of the industry on the Coast and in the Interior, the transformations in capital-labour relations during the period, government forest policy, and the forest industry's encounter with the emerging environmental movement are all considered in this eloquent analysis.

Over 330 clear color photos display the wide array of equipment once used to log high timber that are now eminently collectible, including axes, saws, filing tools, springboards, oil bottles, undercutters, wedges, marlin spikes, drag saws, and venerable chainsaws. Historical photos display towering giants of old growth forests where loggers toiled decades ago. An informative text provides useful information on cleaning and preserving the antique logging tools, descriptions of them, values, and a bibliography. This book will be treasured by all who share a fascination for logging as it was done by the lumberjack, buckeer, and high climber. AUTHOR: Kevin Johnson has been collecting logging tools and researching the logging industry for years. He lives in Tacoma, Washington, where his ancestors settled to log the high timber.

"Company town." The words evoke images of rough-and-tumble loggers and gritty miners, of dreary shacks in isolated villages, of wages paid in scrip good only at price-gouging company stores, of paternalistic employers. But these stereotypes are outdated, especially for those company towns that flourished well into the twentieth century. In *Company Towns of the Pacific Northwest*, Linda Carlson provides a more balanced and realistic look at these "intentional communities." Drawing from residents' reminiscences, contemporary newspaper accounts, company newsletters and histories, census and school records, and site plans, Carlson looks at towns in Oregon, Washington, and Idaho. She examines how companies went about controlling housing, religion, taxes, liquor, prostitution, and union organizers. This vibrant history gives the details of daily life in communities that were often remote and subject to severe weather. It looks at the tragedies and celebrations: sawmill accidents, mine cave-ins, and avalanches as well as Independence Day picnics, school graduations, and Christmas parties. Finally, it tells what happened when people left--when they lost their jobs, when the family breadwinner died or was disabled, when the mill closed. An ample selection of illustrations, most never previously published, broadens the appeal of this lively and well-researched book.
