Like America itself, the architecture of the United States is an amalgam, an imitation or an importation of foreign forms adapted to the natural or engineered landscape of the New World. So can there be an "American School" of architecture? The most legitimate claim to the title emerged in the 1950s and 1960s at the Gibbs College of Architecture at the University of Oklahoma, where, under the leadership of Bruce Goff, Herb Greene, Mendel Glickman, and others, an authentically American approach to design found its purest expression, teachable in its coherence and logic. Followers of this first truly American school eschewed the forms most in fashion in American architectural education at the time—those such as the French Beaux Arts or German Bauhaus Schools—in favor of the vernacular and the organic. The result was a style distinctly experimental, resourceful, and contextual—challenging not only established architectural norms in form and function but also traditional approaches to instructing and inspiring

We differentiate instruction to honor the reality of the students we teach. They are energetic and outgoing. They are quiet and curious. They are confident and self-doubting. They are interested in a thousand things and deeply immersed in a particular topic. They are academically advanced and "kids in the middle" and struggling due to cognitive, emotional, economic, or sociological challenges. More of them than ever speak a different language at home. They learn at different rates and in different ways. And they all come together in our academically diverse classrooms. Written as a practical guide for teachers, this expanded third edition of Carol Ann Tomlinson's groundbreaking work covers the fundamentals of differentiation and provides additional guidelines and new strategies for how to go

Employ cognitive theory in the classroom every day Research into how we learn has opened the door for utilizing cognitive theory to facilitate better student learning. But that's easier said than done. Many books about cognitive theory introduce radical but impractical theories, failing to make the connection to the classroom. In *Small Teaching*, James Lang presents a strategy for improving student learning with a series of modest but powerful changes that make a big difference—many of which can be put into practice in a single class period. These strategies are designed to bridge the chasm between primary research and the classroom environment in a way that can be implemented by any faculty in any discipline, and even integrated into pre-existing teaching techniques. Learn, for example: How does one become good at retrieving knowledge from memory? How does making predictions now help us learn in the future? How do instructors instill

Transformative Classroom Management The natural condition of any classroom is harmonious, satisfying, and productive, so why do so many teachers struggle with problems of apathy, hostility, anxiety, inefficiency, and resistance? In this groundbreaking book, education expert John Shindler presents a powerful model, Transformative Classroom Management (TCM), that can be implemented by any teacher to restore the natural positive feelings in his or her classroom—the love of learning, collaboration, inspiration, and giving—and create a productive learning environment in which all students can achieve. A complete guide to a paradigm-shifting model of school discipline. Disruptive students need problem-solving skills, not punishment. Traditional school discipline is ineffective and often damaging, relying heavily on punishments and motivational procedures aimed at giving students the incentive to behave better. There is a better way. Dr. Ablon and his co-author Dr. Pollastri have been working with schools throughout the world to refine the Collaborative Problem-Solving (CPS) approach, creating a step-by-step program for educators based on the recognition—from research in neuroscience—that challenging classroom behaviors are due to a deficit of skill, not will. This book provides everything needed to implement the program, including reproducible assessment tools to pinpoint skill deficits in areas like frustration tolerance and flexibility that are at the root of students' challenging behaviors. Whether you are a teacher, counselor, coach, or administrator, the CPS approach to school discipline will provide you with a new mindset, an assessment process, and an effective intervention plan for each of your challenging students. You will walk away with strategies that are immediately actionable with the students in your life.

Classroom management is traditionally a matter of encouraging good behavior and discouraging bad by doling out rewards and punishments. But studies show that when educators empower students to address and correct misbehavior among themselves, positive results are longer lasting and more wide reaching. In *Better Than Carrots or Sticks*, longtime educators and best-selling authors Dominique Smith, Douglas Fisher, and Nancy Frey provide a practical blueprint for creating a cooperative and respectful classroom climate in which students and teachers work through behavioral issues together. After a comprehensive overview of the roots of the restorative practices movement in schools, the authors explain how to \*

- \* Establish procedures and expectations for student behavior that encourage the development of positive interpersonal skills;
- \* Develop a nonconfrontational rapport with even the most challenging students;
- \* Implement conflict resolution strategies that prioritize relationship building and mutual understanding over finger-pointing and retribution.

Rewards and punishments may help to maintain order in the short term, but they're at best superficially effective and at

Unfortunately, in traditional public, public-charter, private, parochial, and home schools across the country, most teachers lack an understanding of how the brain receives, filters, consolidates, and applies learning for both the short and long term.
