Persuasion Ethics Today explores persuasive communication in the fields of advertising, promotions, public relations and integrated marketing communication, and is designed for course use in advertising curricula. Ethical questions have become increasingly important in today's media landscape, and issues of regulation, privacy, and convenience are the subjects of heated debate among consumers, industry professional, policy makers, and interest groups. With the explosion of social media, mobile devices, tracking technologies, and behavioral targeting, the ethical issues about persuasion continue to increase in importance. This book's goal is to offer a broad introduction to the ethical standards, challenges, understanding, and decision-making strategies involved in the practice of persuasion. Persuasion Ethics Today links real world persuasive communication activities to fundamental philosophies of ethics. It also offers tools for students and practitioners to engage with ethical dilemmas in a systematic way, and jumpstart debates about the right ethical choices in an increasingly complex media and social environment.

Modular Kaizen is a development of necessity. Improvement has to happen on the fly in our rapidly changing world. This book is about using the resources, people, and schedules already in place to get things done. Modular Kaizen is the counterpoint to a kaizen blitz, in which team members are confined in a room to hammer out an opportunity or a solution to some problem. In the hectic, interrupt-driven environment of many organizations, it is simply not possible to remove critical players from normal operations for any length of time. Grace Duffy draws on 40 years of experience to incorporate techniques, innovations, and lessons learned in pursuit of effective continuous and breakthrough improvement. Part I provides the conceptual model along with steps and tools for process and system improvement in an extremely busy and interrupt-driven workplace. Part II offers three case studies—from manufacturing, healthcare, and aerospace—to show how the techniques work in real time. If you are looking for proven approaches to integrating quality improvement into daily work, this is your book. It is written for those of us who have to “get it done,” not just talk about it. So roll up your sleeves and dig in.

"Spurious Correlations is the most fun you'll ever have with graphs."--Bustle Military intelligence analyst and Harvard Law student Tyler Vigen illustrates the golden rule that "correlation does not equal causation" through hilarious graphs inspired by his viral website. Is there a correlation between Nic Cage films and swimming pool accidents? What about beef consumption and people getting struck by lightning? Absolutely not. But that hasn't stopped millions of people from going to tylervigen.com and asking, "Wait, what?" Vigen has designed software that scours enormous data sets to find unlikely statistical correlations. He began pulling the funniest ones for his website and has since gained millions of views, hundreds of thousands of likes, and tons of media coverage. Subversive and clever, Spurious Correlations is geek humor at its finest, nailing our obsession with data and conspiracy theory.

Blockchain and other trustless systems have gone from being relatively obscure technologies, which were only known to a small community of computer scientists and cryptologists, to mainstream phenomena that are now considered powerful game changers for many industries. This book explores and assesses real-world use cases and case studies on blockchain and related technologies. The studies describe the respective applications and address how these technologies have been deployed, the rationale behind their application, and finally, their outcomes. The book shares a wealth of experiences and lessons learned regarding financial markets, energy, SCM, healthcare, law and compliance. Given its scope, it is chiefly intended for academics and practitioners who want to learn more about blockchain applications.

The archaeology of war has revealed evidence of bravery, sacrifice, heroism, cowardice, and atrocities. Mostly absent from

these narratives of victory and defeat, however, are the experiences of prisoners of war, despite what these can teach us about cruelty, ingenuity, and human adaptability. The international array of case studies in Prisoners of War restores this hidden past through case studies of PoW camps of the Napoleonic era, the American Civil War, and both World Wars. These bring to light wide variations in historical and cultural details, excavation and investigative methods used, items found and their interpretation, and their contributions to archaeology, history and heritage. Illustrated with diagrams, period photographs, and historical quotations, these chapters vividly reveal challenges and opportunities for researchers and heritage managers, and revisit powerful ethical questions that persist to this day. Notorious and lesser-known aspects of PoW experiences that are addressed include: Designing and operating an 18th-century British PoW camp. Life and death at Confederate and Union American Civil War PoW camps. The role of possessions in coping strategies during World War I. The archaeology of the 'Great Escape' Experiencing and negotiating space at civilian internment camps in Germany and Allied PoW camps in Normandy in World War II. The role of archaeology in the memorial process, in America, Norway, Germany and France Graffiti, decorative ponds, illicit saké drinking, and family life at Japanese American camps As one of the first book-length examinations of this fascinating multidisciplinary topic, Prisoners of War merits serious attention from historians, social justice researchers and activists, archaeologists, and anthropologists.

This major two-volume handbook is an extensively revised, updated second edition of the highly praised Survey of Applicable Mathematics, first published in English in 1969. The thirty-seven chapters cover all the important mathematical fields of use in applications: algebra, geometry, differential and integral calculus, infinite series, orthogonal systems of functions, Fourier series, special functions, ordinary differential equations, partial differential equations, integral equations, functions of one and several complex variables, conformal mapping, integral transforms, functional analysis, numerical methods in algebra and in algebra and in differential boundary value problems, probability, statistics, stochastic processes,

calculus of variations, and linear programming. All proofs have been omitted. However, theorems are carefully formulated, and where considered useful, are commented with explanatory remarks. Many practical examples are given by way of illustration. Each of the two volumes contains an extensive bibliography and a comprehensive index. Together these two volumes represent a survey library of mathematics which is applicable in many fields of science, engineering, economics, etc. For researchers, students and teachers of mathematics and its applications.
